Well as I work for some folks I bet you would not like, I'll pass your
request along to my boss and see what he says about your outright disregard
for the federal copywight laws.

That other George..

>I had an 895 It was ok and then I got the 780 it was better.

The 780 is more sophisticated, but has lousy 800 MHz receive
sensitivity. The 895 blows it away for weak signal reception.

What do you mean by "real story"? Explain yourself. Can't expect an answer to an unknown question.

Police are not my main concern. I haven't had any problems lately, so they are actually my LAST concern at the moment. I'm just trying to convey a point that locally (and in many other locations by the sounds of it), there are MANY problems with law enforcement corruption. Why? Who knows, maybe they get off on the "power" they hold over everyone else... There are far too many that feel and act as if they are something special and are ABOVE the law, believing everyday citizen are nothing but their play toys.

I have. Does no good. One email address or "name of site keeper" does not say anything. I know that it is simply very easy for an organization to hide behind titles and names. Why dont you tell me all you know about that site, who puts it up and who is behind it. I suspect you either dont know or are unwilling to divulge the info.

Unfortunately, a person needs to write in a style that is understandable by it's intended recipient. Apparently you seemed to have a problem reading and understanding my initial post / story, so I figured I'd try and clue you in in terms that you just might understand. It appears that my efforts are / were in vain as you don't appear to be able to understand anything. Dr.? Of what? Not the ability to comprehend, that for sure.

Chances are you will not be able to switch between scanners while the computer is running. You will probably need to reboot when you switch to another scanner. There should be no damage to your scanners.

You might be comforted in the fact that law enforcement officers commit suicide
at a much higher rate than civilians do.
Perhaps it's all that 'feeling special' and being so 'above the law', that you
spout off about.

Perhaps it's just being burnt out by years of dealing with people like you.

From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3EB08A60.8020301@licensed4fun.com>
Source record: 31747

I just got 2 BC 785's today. Since there isn't much miller activity in the evening I'm doing some comparing in the Civil Air band (108-136MHz).

First test didn't do very well. Example, on the 780's I can receive the ground side of a Tower on 120.300MHz that's located about 30 miles away. This would be Sanford Tower for those in the area. On the 785's I can't hear the tower even with squelch wide open.

This test involved using the same antenna feeding 2 785's and 1 780 via a Stridesberg Active multicoupler so I know its not a difference in antennas. Tried a few other air freqs with similar disappointing results.

Tomorrow I'll try some UHF MilAir freqs and see what happens.

I would like to hear from others that have both a 780 and 785 and hear your thoughts on the AM (108-136 & 225-400 MHz) sensitivity comparisons.

Interestingly I find the R5 system to have an edge on the R2. Icom were
trying to give customers the flexability to design their own banks system
and they have certainly done that. If like me you use lots of banks with
just a few freqs in it is better. This certainly is a very clever and novel
approach to the problem and I think that it could catch on. I do sympathise
with anyone else, who like me spent hours trying to figure out this system
from the manual !

Come on, even a few years ago I bought one with a voice on it. If you learn the keys, a lot of it is easy to do. Avoid those with too much complexity though. I have an ICOM. Beware though that listening in many countries is illegal, and most, if not all of the emergency networks are in the process of going encrypted digital, so there will be less and less you can hear.

I'd suggest a scanner you can use from the computer so the screenreader can be used if you want more complexity.

Brian

hello all!
ok , given the responses and alot of research online , it seems the 780 had more support than the 895 so i purchased it,
input of the freqs was no problem , followed the book, but it seems the squelch keeps some freqs from coming thru (set the squelch on one freq seems to keep other freq from coming thru when there is a transmission) that were fringe (150 mhz and 460 range)on my older bc170,(is there something i missed?) have a scantenna on order so hopefully this will clear up that problem with increased reception...
back to the topic, thx to everyone that gave input and helping me make a descion in this, it really helped loads.
now just waiting for my cable to come in so i cam use it with the puter!
ya'll have a good one!

Unfortunately,
^
^ Hmm. A cop on TV maybe?

Actually I don't watch TV at all. The only TV I ever bought was stored away a long time ago. The term "scumbag" was defined by James S. Prine, a self-proclaimed ex-cop, elsewhere in this newsgroup.

^ Cops, like every other groups, have problems. Should we perhaps
^ use robots instead?

Why is it that you guys can only think in extremes; it's either one thing completely or it's the exact opposite completely? For example:

- It's either police harassment and brutality or it's anarchy.

- We either have police harassment or we don't have police.

- You're either a cop or you're a criminal.

If a cop has problems then it should be handled the same way it would be handled with the rest of us. If a cop beats or threatens a spouse then the cop should go to jail. Then, because of the trust, power, and authority we place in cops, the cop should undergo an evaluation to make sure that cop is still safe to perform police work. You seem to be suggesting that we should allow cops to represent the bottom two percent of society as well as the top two percent.

The replies I get here always seem to be with the misconception that I am suggesting that there should be no cops. I am suggesting no such thing. To see what I am suggesting, go back and read all my messages again.

Frank

That's funny, really.

They wouldn't have to "deal with people like [me]" if they would do their jobs and stop abusing the power they have. If an officer is fair in the way he handles things, and does go around looking to create trouble for others, then they will be treated fairly and decently by myself.

In all honesty, I think the world needs MORE people like me; people that refuse to put up with those that abuse their power and rank to harass and belittle those that are "under" them. People that refuse to put with the bull shit and not sit on the sidelines and let the abusers walk all over them...

Mike, that would depend on who you are listening too.

Example:
VHF ham band: above 147.00 you are correct, 145.00 & 146.00 you listen to the lower frequency.

I know in some cases police/fire repeaters use various splits.

On another side of this coin, we sponsored a "Blind 4 Sight" bicycle race
this past Sunday. The blind riders rode tandem bicycles with sighted
riders.

Rodney, who is blind, was the dispatcher on the 462.15mHz (GMRS?) radio
coordinating the assistance vans around the 68-mile riders course. He did
an ace job.

The point here is a lot of those in the police force are not fair and going one step further, they treat their own much differently then you or I.

This story is a great example of my point. He was investigated 3x for spousal abuse, he was investigated for raping a former police officer, and he failed the clinical psychologists recommendation to be employed as an entry level patrol officer on his initial employment screening. So how did he become the chief of police for the 2nd largest city in the state of Washington? Who knowsï¿½.

We gave this guy much more power than a plumber has so that point is invalid. He actually used his department issued glock 45 to shoot his wife and himself. Most plumbers would not be able to kill others and themselves with a toilet plunger no matter how hard they may try.

Hey now we received an update to the WinScan780 we bought, i.e. I does not have the same reg number as our CD copy and it does not work but hey they sent us one.. hahahahaha

The whole WinScan 780 Horror:
http://webpages.charter.net/moment/winjunk.htm

The best software package we have found for both the 780XLT and the 785D is TrunkStar from the guys at "Signal Intelligence" http://www.scanstar.com and no we have no interest in the company :-) When something works we say so simple as that :-) And it's working for us.

Trunker can use 1 or 2 scanners. None of them need to be 'trunk tracking' scanners (but trunk trackers will work). In a single scanner setup, the scanner needs to have a discriminator tap. The discriminator signal is fed to a data slicer, and the data slicer output is sent to your computer's serial port. The scanner just sits on the control channel in manual mode.

If you want to hear the audio of the priority talkgroup being 'tracked' by Trunker, you need a second scanner that is computer controlled (there is a list of supported scanners in the Trunker docs). The second scanner can either be hooked to second Com port, or you can use the same Com port if your data slicer has a serial pass-through.

Hope that helps.

Gosh, and you know, I never said any of these things. So, it is
obvious that you tend to lump people into groups, without
really seeing if they should be in that group.

> If a cop has problems then it should be handled the same way it would be
> handled with the rest of us. If a cop beats or threatens a spouse then the

And the sad thing is, it was. Spousal abuse is an issue that is
rarely reported, and on the first few reports, often the complainent
asks no report, no arrest. Kind of hard to make a case there.

> see what I am suggesting, go back and read all my messages again.
>

Kind of hard to read through all that drivel, I would just ask you two
simple questions.

1. Where did I say you thought there should be no cops?

2. What agency did you apply to become a LEO that turned you down, giving you such hate for the LEO community? Evidently the screening process worked.

>The term "scumbag" was defined by James S. Prine, a
>self-proclaimed ex-cop, elsewhere in this newsgroup.

You can read one of my books and learn even more, Frank. Or do you eschew reading as well as television?

>If a cop has problems then it should be handled the same way it would be
>handled with the rest of us.

If you had experience with law enforcement people, you'd know that cops are dealt with much more harshly than are non-cops, when it comes to 'handling', and there are many cases available which support that.

How many careers allow that, even when one of their own is accused and found totally innocent of any wrong-doing, that individual is punished anyway, as a matter of 'policy'?

>If a cop beats or threatens a spouse then the
>cop should go to jail.

They invariably do, and they get convicted, when they violate the law. Trouble is that a cop can merely be 'accused' of something, even if the facts clearly show that no crime was committed, and punishment is inflicted anyway, because police departments would rather sacrifice their own, than cause public displeasure.

>Then, because of the trust, power, and authority we
>place in cops, the cop should undergo an evaluation to make sure that cop is
>still safe to perform police work.

Most all police departments require that anyway. Most departments require that an officer be evaluated after exposure to a 'terminal event', such as a suicide or fatal shooting, etc.

Frank, I respectfully suggest that you read the current issue of "Police: The Law Enforcement Magazine", which contains a special report titled "What drives a good cop to suicide?"...it's well-researched and very well written.

You might learn that cops have to put up with a *lot more* than nonsworn people performing their jobs, and it takes an incredible toll on the individual officer. Some eventually break down from the stresses, and that often leads to unfortunate events.

>They wouldn't have to "deal with people like [me]" if they would do their
>jobs and stop abusing the power they have.

Nonsense! You dislike cops, apparently without any regard whatsoever about how individual cops conduct themselves...no, you've clearly branded *all* cops as power abusers, bullies, or what-have-you, and that's just the way it is.

Well, that's no big thing, you certainly didn't invent the concept, and while society these days has gone all 'P.C.' about hatred and bigotry and prejudice, apparently it's still okay to be prejudiced against cops.

> If an officer is fair in the way
>he handles things, and does go around looking to create trouble for others,
>then they will be treated fairly and decently by myself.

How noble of you! You get to decide whether or not cops are acting appropriately, as set by your personal standards, before you graciously condescend to treat them 'fairly and decently'.

>In all honesty, I think the world needs MORE people like me;

I'm quite sure Saddam Hussein thought *precisely* the same thing <g>

>people that
>refuse to put up with those that abuse their power and rank to harass and
>belittle those that are "under" them.

We've got a great number of people who feel exactly the same way you do...they resent and hate all forms of authority, and don't mind inflicting their views on anyone they come into contact with.

>People that refuse to put with the
>bull shit and not sit on the sidelines and let the abusers walk all over
>them...

Yes, I've heard all this before. Prisons are filled with people exhibiting this type of antisocial mentality.

Source record: 31768

>The point here is a lot of those in the police force are not fair and
>going one step further, they treat their own much differently then you
>or I.

Okay...prove it. You've made an allegation, now prove it here, conclusively, beyond a 'reasonable doubt'. Remember that generic 'branding' of groups is inherently unfair and cannot be tolerated. Proceed.

>He was investigated 3x for
>spousal abuse, he was investigated for raping a former police officer,
>and he failed the clinical psychologists recommendation to be employed
>as an entry level patrol officer on his initial employment screening.

Merely being 'investigated' means nothing, any wacko with a telephone or who wants to walk into a station can make a complaint against anyone, for any reason, and then an 'investigation' ensues. If a civilian is found to be 'clean', the investigation ends then and there, and that is well and good. However, if an allegation is made against a cop, that cop is automatically disciplined, even if the allegation is found to be totally groundless and invalid. You're right...cops *are* treated differently than non-cops!

As for cops being hired despite failing a 'clinical psychological examination', that is invariably a civil service procedure, not one set up or administered by 'the cops' themselves.

I remember a notable example...Antoinette Frank, who was admitted to the New Orleans Police Department as a police recruit despite 'failing' her psychological assessment tests.

She also had problems while attending the academy, and even *more* problems during her field training program. Ultimately, she became a sworn Police Officer and later was convicted of murdering three people during an armed robbery in 1995.

One of the murder victims was Police Officer Ronnie Williams II, working a paid detail at the restaurant that was robbed!

He and Frank used to work together!

How did she get on the job? How did she get as far as she did? I can tell you...civil service. The NOPD didn't want her in their ranks, but there's precious little the rank-and-file can do against civil service and people with political connections.

It should be noted, too, that Frank (now on Death Row), is also suspected of murdering her own father.

Len Davis, another ex-cop on Death Row, also 'made it' through the civil service procedures and became a New Orleans Police Officer despite the 'rank and file' not wanting anything to do with him because he was nothing more than a thug.

Civil service rules have been rectified *here*; unfortunately, many other communities will have to carefully check theirs as well.

>So how did he become the chief of police for the 2nd largest city in
>the state of Washington? Who knows….

Like I said before...politicians have ways of making things happen. Some politicians wear badges. Unfortunate, but a fact of life that we can't do much about, until they *really* act out.

>He actually used his department issued glock 45 to shoot his
>wife and himself. Most plumbers would not be able to kill others and
>themselves with a toilet plunger no matter how hard they may try.

It has been shown that Police Officers...including females...are comfortable with the 'tools of the trade', and are more likely to choose their sidearm as a suicide tool than most other tools or methods available.

Yes,

I was told I would receive a free copy for participating in the beta. Nada.

I was on the Trunkstar 780 beta and had good contact/response to Sam Durham.
He was responsive, not like Pozilla.

I bought the Arc250 Pro and have grown to really like it, especially the
logging potential.

I have already done that and its not any better. Just seems like the
785 is deaf in the 108-136 & 225-400 ranges. Kind sad.

Just did a bit more checks. Compared it against a PRO-2006, PRO-2052,
PRO-2035, PRO-26, PRO-60. Out of all these scanners the BC 780 was the
best in these two ranges. The PRO-2006 was a very close second. The
PRO-2035 and PRO-26 tie for third. the PRO-2052 and PRO-60 tie for
fourth and bringing up the rear is the most expensive scanner the BC
785. Of course these arenï¿½t scientific results, just common sense
observations.

If youï¿½re just interested in receiving your local airport, police, fire
or need digital capability Than itï¿½s a fine scanner for that purpose.
However if youï¿½re a serious hobbyist then donï¿½t waste your money on the
785 but pickup up the BC 780.

46. Speech Inversion Descrambling

Newsgroup: rec.radio.scanner
Date: 2003-05-01 21:26:05 UTC
From: ctpds49@aol.com
Message-ID: <20030501172605.21021.00000413@mb-m18.aol.com>
Source record: 31775

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

What is a "data slicer" in the context of scanner radios? I have heard this term in conjunction with trunk tracking scanners but is it limited to this type of scanner?

48. Re: Icom IC-R5, Yaesu VR-120D and Alinco DJ-X3 with one to chose?

Newsgroup: rec.radio.scanner
Date: 2003-05-01 22:03:00 UTC
From: Bob Parnass <not-for-mail@fake.invalid>
Message-ID: <pan.2003.05.01.22.02.58.762841@fake.invalid>
Source record: 31776
Cross-posted to: alt.radio.scanner,rec.radio.scanner

If you want to associate a frequency with more than
one bank/channel, you must program it multiple times.

The IC-R5 memory setup is different than other scanners.
It has a 1,000 channel list of memories in a single "super bank."

The programming procedure requires you

1) place the frequency
and other settings into a VFO.

2) Then, you write the information from the VFO into one of the 1,000 memories
in the "super bank."

3) You can associate any of the 1,000 memories with only one
bank number and channel number, but you don't have to.

If you want 155.475 MHz to appear in two different banks (e.g. A12 and B66),
you must program 155.475 into TWO memories in the "super bank," (e.g., 209
and 210), then designate A12 for one and B66 for the other.

>It is very unfortunate for us all that
>most good cops will protect the bad cops.

Frank, this is illogical and patently untrue. Logically speaking, if a 'good cop' protects a 'bad cop', then by the very fact of doing so, the 'good cop' IS a 'bad cop' himself.

And there is a *very* old saying amongst policemen, "No one hates a bad cop more than a good cop"...something I've found to be true in the great majority of instances.

Certainly some cops are bad, some turn bad after being in law enforcement for any number of reasons. But there are a large number of organizations and entities that exist solely to identify and remove those people from law enforcement.

I believe you wrote before that you'd had 'thousands' of negative contacts with military law enforcement. That may be true, or otherwise. But you certainly seem to make a lot of 'wild and inaccurate assumptions' yourself, so don't get too uppity with Black Bowers.

As for radio scanning, you can monitor New Orleans Lakefront Airport Tower on 119.9 MHz when you're in the area.

The main problem is "some" people fail to understand that police put up with a load of unnecessary useless crap from the public on a daily basis. When we get home we don't need to have the same thing from the computer. And it's people like Red? or whoever who thinks they where abused with a traffic stop. Think again. COPS are humans also and come from the very same neighborhoods as the rest of you anti COP people. Just as it was said in the movie, "Police Academy" COP-Citizens On Patrol. Yet, we're just American Citizens just like you, working to feed our families, pay our bills and go about our business like any other American Citizen.

God Bless America and I hope this thread dies. It's useless BS.

You know what? No offense but considering the number of bugs they have found and fixed since the release date I'd say you beta testers did a really lousy job. See: http://www.pozillasoft.com/DPabout.htm

You'll of course spin this in your usual fashion to make them look bad, but gee - shouldn't the beta team have caught these issues? I'm thinking "yes..."

Also note how quickly the issues were found and corrected. This had to be a result of emails to their support department.

Looks like they are turning things around, despite what you and the IDIOT NO-SPAM want everyone to believe.

<Snip>

You know something Q, I don't Reply to many of your Political tirades or let a
Person such as yourself who knows a lot about very little aggravate me, But I just saw how many times you posted your conservative "Pledge of Alegiance" to 4 news groups of which 3 of them I subscribe to!

You claim that you making a proclamtion and a stand for peace and justice,democracy and
autonomy,internationalism,equity,freedom,solidarity,diversity,sustainability (note that I did not say peace again because you've already mentioned this.)and justice.

Now I know that a Broadband connection is a Very wonderful advancement of technology,and that the odds are probably in your favor that you have a broadband connection(or a lot of time on your hands with nothing constructive to do) to post so many repeats of the same pledge as you have in all these newsgroups!

I on the otherhand have a Dialup connection and a 56.6 Modem on my setup and while downloading My newsgroups it Does tend to slow down a lot because I actually get approximatly 45.5 instead 56.6 as my modem should (But then again who ever said that life is Fair).

While reading your posts to alt.radio.scanner a small glimmer of wisdom was reveiled to me about your posts, amazingly I discovered that you are a terrorist,the weapon that you use is your computer,the delivery system is your internet service provider just to show everyone in these newsgroups just how little you do know about everything!

You might think me somewhat callous to call you a terrorist except that unlike the true definition of someone like Osama bin Ladin or Saddam Husain

who may be harboring "Weapons of Mass Destruction" you actually use political commentary as a "Weapon of Mass Distraction" and that is why I call you a Terrorist, you are no better than Osama bin Ladin or Saddam Husain,and just like them you use words to draw a shroud of anonimity around yourself,

Just remember "Q" at least one preson in this newsgroup knows what your agenda is!

Soon others may know too!

Victor Newman

Same as they always smoke when Icom designs a scanner, or as they like
to refere to them as 'communications receivers'
I've yet to see an Icom receiver that has a well designed channels
system and decent scanning capabilities.
At least the receive on most of them is pretty good. But thats only
one factor you look for when buying a scanner.

Dave

A channel can exist in more than one bank, as long as you have programmed it into the "master" section more than once.

I also agree with Rusty that the R5 system is far better than the set bank sizes in the R2.

I've reported in a list of at least 15 seperate bugs in RC0 and RC1 that
were not fixed prior to release.

That is why I do not use the Pozille crap and I purchased Arc250. Better
product.

Saddam has fallen. Iraq is free.

God Bless The U.S.A.!

(Re-worded entirely)
The following is a list of morons.
That's all. Just morons. Doesn't matter
what they've done or what they said,
it's all been equally moronic.

The moron list: (Now in order of highest to lowest stupidity)

The top moron in any group on Usenet is Gandalf Grey -
gandalfgrey@infectedmail.com - alt.current-events.clinton.whitewater (Yes
Hanson. I do post your name in every one of my posts and now you're at the
top)

Bush Busta / A.K.A Jim Kennemur - BushBusta@America.com -
alt.current-events.clinton.whitewater (Usually giving Gandalf the reach
around)
banjocat - banjocat@bellsouth.net - alt.current-events.clinton.whitewater
(Fuck you and you threats)
Gary Roselles - rosell19@enetis.net - alt.current-events.clinton.whitewater
(Escapee from Rapid City Regional Hospital's psychiatric unit)
Dr. Fred Hambrecht Sr - w4jle@charter.net - rec.radio.scanner (Threatened to
tell my ISP cuz I was cussin' on Usenet. Didn't work)
Al Patrick - arp@inet4u.com - rec.radio.shortwave (Thinks God kills people
for listening to Rock & Roll)
Usenet User - pkeller@mil.edu - rec.radio.scanner
Jon Van Allen - kf7yn@qwest.net - rec.radio.scanner
MnMikew - MNMiikkeW@aol.com - rec.radio.scanner
Lou Scannon - scannon@lmountain.com - alt.current-events.clinton.whitewater
Steve Hiner - shiner@tampabay.rr.com - alt.current-events.clinton.whitewater
ad lib - leedesi56@yahoo.com - alt.current-events.clinton.whitewater
TW. - tandb80@comcast.net - rec.radio.scanner

Never anonymous Bud - thekat@san.rr.com - rec.radio.scanner

Oh, we can read just fine. But we just don't agree with your assessment of what was read. Unless police officers are darn bored (not very likely today), they don't just pull people over for no reason. So obviously the driver was pulled over for some reason. None of us know exactly what that reason was. After the driver was pulled over, the officer evidently decided he was not doing whatever he was pulled over for. However, in the process of that stop, the officer noticed the bad tire and ticketed the driver for it. To take that and try to turn it into harassment is absurd.

There are a couple hundred thousand police officers in the United States.
Can you name any other group that size in this country where you would not
be able to find bad examples?

Which ones would that be? Does their cheir charta explicitly identifiy
top-posting as a requirement for participation?

I believe you are on rather shaky ground with that assertion.

What he meant to say was, there are *hords* of uninformed users
on Usnet who don't know any better, and they are even the
majority (if not nearly the total) of users in some newsgroups.

See what happens when you let just _anybody_ have access!

(Where "Anybody" is defined as whatever recognizable group showed
up immediately following the group you were part of... ;-)

I remember people saying that The Well was the death of Usenet,
and then it was people from The Well saying "It's September,
again" or "What do you expect from an .edu domain." Then it was
the institutional folks who didn't like the unwashed masses that
PSI and UUnet allowed.

Of course when AOL hit (never mind WebTV), lets face it, this
wasn't a very funny joke anymore... But we have to admit the
Internet (never mind Usenet) wouldn't be what it is if every
other grandmother in the country wasn't connected.

But damned, the least they could do is learn a little style.

For Sale: Radio Shack Pro 2045 200 channel base scanner. This gem of a scanner covers the usual frequencies + the military air band. Optional CTSS tone board is installed. Includes original box, manual, telescoping antenna and AC adaptor. Radio is in mint shape, looks brand new. This radio was made for RS by Uniden. It's very sensitive, especially on VHF high and the commercial airband. Asking $135, includes ground shipping within US. Also, wiil consider all trade offers, for another handheld or base scanner that trunk tracks Motorala and EDACS systems.

Dwight Stewart <BAD76B04.1894F%stewart@say.net>...

^ There are a couple hundred thousand police officers in the United States.
^ Can you name any other group that size in this country where you would not
^ be able to find bad examples?

That's the whole point! Because of the trust, power, and authority invested in a cop, being a BAD COP is a greater crime than being a BAD NON-COP, yet the bad non-cops are handled with greater severity than the bad cops are. A bad cop is one who searches for a vehicle mechanical violation when he has either willfully or inadvertently stopped the wrong person, rather than apologizing and letting the person go.

Hello Mr. Harris:

Presently running their Type 106 from the Radio Man wire company
(it's apparently like LM 400 or Super RG 8, I believe - larger dia.,
lower loss stuff) from a Discone in my attic to my bedroom.

Just got a Scantenna ST2
It, surprisingly, has a 75 ohm output (after its transformer), thus
all my questions regarding what to run for this.
My sw radio has a 50 ohm input.

As always, much thanks for all the help; really appreciate it.

Regards,
Bob Rose

You appear to be missing the point here and indeed confusing things. You have 1000 'channels' with the R5 and you can only have one frequency in each channel just like any other set. However, the R5 gives you the ability to quickly move these channels from bank to bank and to put any channel into any bank, you can have 10 banks of 100 or 12 banks of 83 or 18 banks of 55. Now for me that is a real step forward in scanner technology.

You can of course have the same frequency in every bank if you like.......

Quickly?! The R5 is the most unfriendly, fiddly radio I've ever used.

Yes, but say I program the eight PMR446 frequencies into channels 0 to 7. I
then decide that I want to keep an eye on them no matter what else I'm
scanning - can I link channels 0 to 7 into more than one bank
simultaneously? Oh no. Someone at Icom is having a laugh...

If it's truly comparable to LMR 400, I would stay with it. RG-6 is good (and it's 75 ohm) but can be difficult (impossible?) to solder to. The impedance mismatch with 50-ohm cable (if it really exists at all) will have negligible effect.

----------But you can't do that with any other scanner either. On all
scanners if you want freqs in more than one bank you have to enter the freq
into each and every bank that you want it in using a different channel
number each time. The R5 is no different in that respect.

I have an old Realistic Pro-2001. Date code is 5A9, model #20-115A, made in Japan by GRE. This unit will run on either 120v AC or 13v DC. It does have a 9 volt memory backup battery which is new and good. While running in AC mode, I can enter a freq. into any of the 16 channels. After I turn the unit off, only if off on second, the entered freq. is gone and it defaults to the preprogrammed freq. of 316.2525 mhz. I have checked several caps. with an ESR meter, even replaced a couple, but no change. Can anyone help?

I will work but you might have a problem sometimes with data loss in the cable. I know some programmers are very fussy with the power it has going to it.

I've blown a couple serial ports and at least one scanner using a mechanichal RS-232 switch box. Seems the cheap switches will connect ports together for an instant when switching- or if they don't connect them together they short various pins in the cable to ground when switching. An all electronic switchbox works well, but even better is a 4 port PCI serial interface. I got one for $22 on the web and I now have COM1: thru COM6:. No more switches.

Prediction: "You'll of course spin this in your usual fashion to make them look bad"

Status: True.

Whatever. I'm glad you like Arc250. I like WinScanDP, especially now with the new fixes and features added. The CC search is awesome, and the ability to import banks from other files and move them around at will simply rocks.

But to each their own.

You know something Q, I don't Reply to many of your Political tirades or let a
Person such as yourself who knows a lot about very little aggravate me, But I just saw how many times you posted your conservative "Pledge of Alegiance" to 4 news groups of which 3 of them I subscribe to!

You claim that you making a proclamtion and a stand for peace and justice,democracy and autonomy,internationalism,equity,freedom,solidarity,diversity,sustainability (note that I did not say peace again because you've already mentioned this.)and justice.

Now I know that a Broadband connection is a Very wonderful advancement of technology,and that the odds are probably in your favor that you have a broadband connection(or a lot of time on your hands with nothing constructive to do) to post so many repeats of the same pledge as you have in all these newsgroups!

I on the otherhand have a Dialup connection and a 56.6 Modem on my setup and while downloading My newsgroups it Does tend to slow down a lot because I actually get approximatly 45.5 instead 56.6 as my modem should (But then again who ever said that life is Fair).

While reading your posts to alt.radio.scanner a small glimmer of wisdom was reveiled to me about your posts, amazingly I discovered that you are a terrorist,the weapon that you use is your computer,the delivery system is your internet service provider just to show everyone in these newsgroups just how little you do know about everything!

You might think me somewhat callous to call you a terrorist except that unlike the true definition of someone like Osama bin Ladin or Saddam Husain who may be harboring "Weapons of Mass Destruction" you actually use political commentary as a "Weapon of Mass Distraction" and that is why I call you a Terrorist, you are no better than Osama bin Ladin or Saddam Husain,and just like them you use words to draw a shroud of anonimity around yourself,

Just remember "Q" at least one preson in this newsgroup knows what your agenda is!

Soon others may know too!

Victor Newman

89. Re: Pro-2001 trouble, loses memory

Newsgroup: rec.radio.scanner
Date: 2003-05-02 19:47:34 UTC
From: Frank346 <frank346@groznyk.com>

Sams Scanner Monitor Servicing book SD-14 has a 32 page section on the PRO-2001. The battery connects to the memory chips through a diode and there is a Zener based voltage regulator that should be running if the radio is plugged in to AC but turned off. It would take two faults to disable both circuits and produce the symptoms you describe. Start by taking some voltage readings at the wire going to the battery clip. The diode is right next to the terminating point for the wire on the main board.

Scott [scott_unit_69@yahoo.bomb] asks : Can it be made for 856 to 861 MHz trunked radio system?

Only if you calculate element lengths at your freqs of interest and lengthen existing antenna elements for freqs you want to hear else might be too degraded for optimum reception.

As far as I know, a data slicer takes the analog signal and "digitizes" it
so the computer can read it...sort of an Analog to Digital Converter

Huge Library Of "Debugging" Information
Provides Unique Technical Surveillance Counter Measures Resource

News: For Immediate Release ï¿½ May 2, 2003

AIKEN, SOUTH CAROLINA ï¿½ Technical Surveillance Counter Measures (TSCM) is more popularly known as "debugging." This field of communications security has gained increased importance as our country faces new terrorist threats. Also, in the competitive world of international commerce, businesses are faced with the threat of competitor intelligence. Then there are those who would illegally "bug" the conversations of others for personal reasons. David Vine Associates, LLC has published a comprehensive information resource for those who practice TSCM and others who wish to seriously explore the field.

According to editor and publisher David Vine, "We have gathered 115 books, reports and documents in Adobe Acrobat files that total 8,254 pages as well as many links to Internet resources. Each of these items is hyperlinked in a 14,000-word overview that explains the field as well as the corresponding links to material on the CD-ROM and to the external web sites.

The individual files can be viewed, searched and printed using the supplied Adobe Acrobat reader software. It has taken more than a year to collect and edit the material and we feel this is a unique resource providing the widest range of in-depth information available. In addition to text material there are two multimedia files. The first is A Photographic History of Military Intelligence and the second is a video discussion of the field with a practitioner. The following is a complete list of the files on the CD-ROM and number of pages in each one:

Well, if they wanted to pay GRE and Uniden royalties, they could/would
have a normal channel set up. But they don't want to for some reason.
Same goes for the other Amateur manufacturers.

But you can just simply scan banks 1, 3, 6, 9, and 10 by pressing a few
buttons, and in a couple of seconds turn off bank 10 and turn on bank 4.
It would be worth a lot of sales if Icom just bit the bullet and paid
Uniden and/or GRE for the rights to link banks and all the other things
a 100 buck Uniden or Radio Shack scanner can easily do.

I wonder how much it would raise the price of say, an R5?

That would make a nice little radio...

100. New CHP air-gnd freq

Newsgroup: rec.radio.scanner
Date: 2003-05-03 00:41:13 UTC
From: garretw@aol.com
Message-ID: <20030502204113.02755.00000503@mb-m13.aol.com>
Source record: 31729

I recently found the CHP plan using 45.06 for speed enforcement comms to the ground units. They were at I-80 eastbound @ Red Top Exit just west of Cordellia scales. They were referring this freq as Tac-6. This freq is listed on websites as Tac-5 (simplex). The ground units were not monitored, seemed like they were tx'ing on different freq. Does anybody know what the other 1/2 of Tac-6 is??

101. Re: New CHP air-gnd freq

Try this link: http://www.scancal.org/chp/freq.html

Looks like 45.06 is a simplex. Bear in mind that it's very possible to only hear the aircraft and not the ground units. Remember, simplex is line-of-sight and the aircraft's antenna is much higher than the ground units' antennae. (what a word - antennae).

--
-me

I see stupid people. They're everywhere.
They don't even know that they're dumb.

102. Radio Rack for Mobile Listening – 3 radios without the Wiring Mess!

Newsgroup: rec.radio.scanner
Date: 2003-05-03 01:35:53 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3EB31CF9.5010008@licensed4fun.com>
Source record: 31731

I got sick of the wiring mess when taking 3 radios mobile. So I built a mobile radio rack which makes for a much neater installation. Also makes it very easy for you to take your radios indoors to use them at your base shack. Anyone who takes there radios in and out of their car often might want to take a look at this as it might give you some ideas. You can see my mobile radio rack at:
http://www.milaircomms.com/mobile_radio_shack.html

And it would be the wrong word, antennae would be applicable only to insects. The plural for those masses of aluminum would be antennas.

The FCC today released licensing and service rules for the 4940-4990 MHz band (4.9 GHz band) for public safety agencies

(Dkt No. 00-32).

http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-99A1.pdf
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-99A2.pdf
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-99A3.pdf
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-99A4.pdf

The rules are flexible enough to allow a variety of operating configurations and should suit public safety's needs in providing broadband data, voice and video applications, from signpost data uploads and downloads to ad-hoc microwave links at special operations scenes. Businesses and the general public will not be allowed here, unlike 2.4 GHz.

Presently, air-to-ground transmission, such as helicopter to field units is not allowed, but may be requested under certain conditions in a waiver.

The rules allow joint local/ federal law enforcement operations per recent Office of Homeland Security Multi-Jurisdictional and related FBI/BATF IntraState Task Force Operations.

Was thinking of either outright selling this or putting it up on Ebay.
Optoelectronics Optocom, 10 out of 10 condition, original manual,
box, s/w, everthing in same condition when originally purchased-non
cell capable. Any offers, takers, suggestions on what to ask for it?
Shoot me an email: sellingitonline@yahoo.com, thanks.

Thank you for using FA:

Why not tell the truth. It CAN NOT BE HAD FOR $175.

If you were honest in your post you'd say $200 which is what one has to bid to walk away with it and not go through the auction process.

You see, we aren't as stupid as we seem here.

Damn, George, got enough radios? ;)

Quick question: what didn't you like about the Shack 2" speakers? I found it worked rather well in my truck with a 780. My hearing is fairly normal; I have a slight loss at the high end, and I'm sensitive to the low end. (So I don't need much, if any, bass. With equalizers I usually have the bass end turned all the way down.)
Anyway, instead of permanently mounting the speaker, I jam it between the passenger's headrest and the raised arm rest, so it's at ear level, about 18" away, pointed forward. I've been rather impressed with the little bugger.

> the bad cops are. (snip)

Nonsense. Just look at this thread to disprove your point. One person gave his side of an incident with a police officer. And, then, without even hearing the other side of the story and without any evidence whatsoever to back up what that person said, people in this thread were publicly calling for that police officer to be fired. Some would have sent emails to that effect if they knew the name of the officer or the specific department. How would you like your job and your future to be subject to this type of public hysteria?

Can you provide proof that police officers are treated less severely by prosecutors than the general public once a crime is committed? Based on the few cases I've seen, many prosecutors, exactly because of public pressure, are quick to throw the book at police officers when they commit a crime. The only slight bias I've seen is with juries which seem to side quicker with a police officer than the more typical suspect.

> A bad cop is one who searches for a vehicle mechanical
> violation when he has either willfully or inadvertently
> stopped the wrong person, rather than apologizing and
> letting the person go.

Why should he apologize and let the person go when a vehicle mechanical violation is found, regardless of the reason for the stop or the reason he searched for that violation? The driver, passengers, and other citizens on the road, are still threatened by that mechanical violation.

I understand your point...

Your first assessment is the EXACT reason they do this around here. We live in a some-what small area, and there really isn't much going on. They pull people over "for the fun of it" because they have nothing better to do... They make false claims and make things up in order to bring in some revenue and to meet their quota (That thing that every officer claims doesn't exist, but we know otherwise; if they don't get a certain number, they will never get that promotion they are hoping for, etc...)

> you called a whiner?

Of course, he won't, Brenda. Instead, he'll jump on anything to prove his point - insecticide cans, gas masks, a site that obviously hasn't been used in years, chemicals that maybe/might have/could have been turned into weapons.

Prior to the war, Secretary of Defense Donald Rumsfeld gave a specific list of chemical weapons material and equipment Iraq was "known" to have, right down to the number of trucks, barrels of chemicals, and delivery systems. That claim was repeated over and over by various members of the military and government.

To this day, none of that has been found. Instead, we get endless news reports of "suspicious" chemicals, often nothing more than insecticide, and "suspicious" sites, none of which have proven to be significant.

Last week, they thought they almost had the goods - cans of decades old mustard gas - which just about every country in the world has had throughout this century and was not on the list of weapons material Iraq was banned from having. I've heard nothing else about that "find" since.

> buttons, and in a couple of seconds turn off bank 10 and turn on bank 4.

That's the sort of scanning which we all like and want, being able to
include and exclude banks from a scan operation with just the press of a
button. :)

> It would be worth a lot of sales if Icom just bit the bullet and paid
> Uniden and/or GRE for the rights to link banks and all the other things
> a 100 buck Uniden or Radio Shack scanner can easily do.

How in hell's name can any company be allowed to patent an idea as vague as
bank linking? What happens next? Will someone try to patent the idea of
using a volume control or liquid crystal display?

^ > a greater crime than being a BAD NON-COP, yet the
^ > bad non-cops are handled with greater severity than
^ > the bad cops are. (snip)
^
^
^ Nonsense.

Which part of that is nonsense? Which of the following:

- That you identified the point.
- That trust, power, and authority are invested in a cop.
- That being a bad cop is a greater crime than being a bad non-cop.
- That bad non-cops are handled with greater severity than bad cops.

^ Just look at this thread to disprove your point. One person gave
^ his side of an incident with a police officer. And, then, without even
^ hearing the other side of the story and without any evidence whatsoever to
^ back up what that person said, people in this thread were publicly calling
^ for that police officer to be fired.

This is only a discussion of the behavior that has been described, it is not a hearing. But let's take two cases: (1) the cop in the incident admits to all that has been described and (2) the cop denies everything.

(1) The cop is in the wrong and should be corrected.
(2) The cop may or not be wrong and further evidence will be necessary to make the determination.

In either case there is nothing we can do, nor should do, regarding the specific incident that was described. All we can do here is discuss, in general, the type of behavior that was described and identify whether it is appropriate or not. And that is exactly what we have been doing. We have not identified any of the parties involved and it would not be appropriate to do so for this type of discussion.

And you cannot truthfully deny that the behavior, as described, does occur. So this discussion has been conducted in a proper manner.

^ Can you provide proof that police officers are treated less severely by
^ prosecutors than the general public once a crime is committed?

Getting them to prosecution is where the difficulty lies.

^ Based on the few cases I've seen, many prosecutors, exactly because of
^ public pressure, are quick to throw the book at police officers when
^ they commit a crime.

That's also my observation.

^ > A bad cop is one who searches for a vehicle mechanical
^ > violation when he has either willfully or inadvertently
^ > stopped the wrong person, rather than apologizing and
^ > letting the person go.
^
^
^ Why should he apologize and let the person go when a vehicle mechanical
^ violation is found, regardless of the reason for the stop or the reason he
^ searched for that violation?

You can't disregard the reason for the search because that is the problem that is being identified. If the jurisdiction has a policy to randomly stop any vehicle in order to conduct a mechanical inspection, or to conduct a mechanical inspection with every stop, then there is nothing wrong with the behavior. But the behavior that is being identified is that the cop conducted the inspection either as a means of justifying the stop or in order to demonstrate to the subject where the power lies. If it is either of the latter then the cop requires corrective action.

John wrote:
> I'm confused, I'm withing 15 miles of KBUF (Buffalo, NY). I'd imagine I
> could hear Tower, Approach, and Departure freq.

Are you sure you're listening to the correct freqs? In your first message you mentioned that an aircraft was "down to 14000". An aircraft decending to 14000 is without question not on a Tower freq (to high) and most likely not on Buffalo's Approach. It sounds more like you're listening to a Center freq. Cleveland Center is the ARTCC for your area.

And aircraft at 14000' could be over 150 miles away from you and the Center's repeater could be another 70+ miles from him.

Also, Tower, Approach, depart, and ARTCC ground transmitters aren't that high of a power and don't use high gain antennas. After all the ground station doesn't need to be heard by another ground station, it only needs to be heard by and aircraft who's antenna is very high in the sky.

Depending on the quality of your scanner and antenna system you may or may not hear the tower side of the conversations being 15 miles away. The Buffalo area has hills and mountains which could get in the way. Even down here in the super flat lands of Florida 15 miles is pushing it to hear a tower. Example, we have an airport which is about 35 miles away, that I can hear but its scratchy and not a good signal. To just get a scratchy signal I'm using a Create Log Periodic which is a $300+ beam antenna with about 13 dB of gain.

When I was living in Pennsylvania I would never expect to have good reception of the ground side of an aviation communication at 15 miles unless I was on top of a hill. However when I was in PA I didn't have a 13 dB gain antenna either....

Just some food for thought,
George

FS: Uniden BC-855xlt Scanner

-50 channel conventional scanner (not a trunk-tracker)
-VHF Low/High, UHF, 800, & 900 MHz coverage
-discriminator tap professionally installed with mini-phone jack
-good physical & electrical condition
-includes AC wall transformer & whip antenna
-works well as a "Trunker" control channel decoding receiver

This unit has been tested, was working well when removed from service,
is clean & in good physical condition, but is sold as-is.

Price is $60 plus shipping. Payment via USPS Money Order only. Shipping
via USPS Priority Mail to the US only.

Contact via e-mail

After reading about panasonic Gigarange phones here on usenet, I was convinced that the handset transmits analog on 900Mhz and only the base unit transmits at 2.4GHz. Well, I decided to take it a little further than just reading usenet. I looked up the FCC ID on the phone and found the official specs on the phone-everything I could ever want to know about the phone. It seems only the older model Gigarange shows the undesirable 900MHz analog transmission, the TG2583S seems to only transmit at 2.4GHz and it does indeed seem to be a digitaly encoded. It looks like I wrote a pissy letter to Panasonic for no reason, oops, sorry panasonic.

>They make false claims and make things up in order to bring in some revenue

PH, is that is really all true, you have recourse. Surely your State has an Attorney General's Office that can look into the matter? If you can show that your police agency is randomly stopping people without any probable cause, you could make a good case not only for individual officers being disciplined or even prosecuted, the agency that allows this foolishness could be rectified as well.

>and to meet their quota (That thing that every officer claims doesn't exist,
>but we know otherwise; if they don't get a certain number, they will never
>get that promotion they are hoping for, etc...)

Gee, the myth of the 'police quota' will never go away, will it, with people like you keeping it going? You really *must* live in a weird area, if police promotions are tied to writing traffic citations and meeting some sort of 'quota'...did you ever think that there are literally thousands of cops out there, right now, who haven't touched a ticket book in years, and these people still get promoted, and serve honorably?

My God, police work is a lot more than writing traffic citations...but all the people working in Child Abuse, Rape, Homicide, Aviation Support, Crime Scene, Administration, DARE, Narcotics, and all the other units will *never* get promoted...because they don't write tickets and thus cannot 'meet the quota'? Hardly!

But do go on, displaying your prejudice against police is more important than piddling little issues like reality.

What you should do is make a starting price of let's say... $9.99, then set a reserve of what is the lowest price you will sell it for. You will find that the ebay auctions work better that way. Just a word of advice.

Setting your start price real close to what you want for it is not really an auction, and will result in very few, if any bids as is the case here.

So far, 62 "tire kickers" and not one bid.

I don't know, it seems that it isn't exactly rocket science to figure
out how to link banks without stepping on Uniden's and/or Gre's toes.
But none of the ham companies, who can make some awesome stuff that
would sell to a whole new audience if they just scanned/searched like a
100 buck RS POS handheld. You would think at least one of them would
bite the bullet and pay the money to get speedy and easy to use
scanning, I wonder how much the royalties per radio are?
Btw, Uniden (Taiwan), and GRE (Japan) are both foreign companies!

If you check into it, Uniden and GRE have almost all the faster scanning
patents, PERIOD. There are a few others, but they got them first and
they are, to be honest, better at what they do than the other ones.
I don't really understand how some of this type of stuff even gets
patented, it seems a little odd.

FA:

(1) Motorola VISAR VHF 16 Channel Portable Radio in Excellent Condition. Model # is H05KDD9AA4DN. Bandsplit for TX/RX is 136-178MHz. Transmit Power 1w-5w. Included with this radio is a Motorola 5" VHF Antenna, Motorola dual-slot Rapid Charger, Ni-Cd battery (purchased 2/03-very little use), Spare battery (unknown condition), and Motorola Leather Carry case with beltloop and wriststrap. Great radio for 2-meter ham use, business use, or public safety volunteer.

For more information, please visit the following e-bay link:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3022503228

Thanks!

I for one would be willing to spend $20 extra(maybe more) for a radio
with the RF perfomance of a couple of the ICOM handhelds I have had, if
they scanned even 25 ch a sec, and linked banks in the normal way. I
don't get it, a radio like my old IC24AT with say even 100 channels and
10 banks of ten would have been a killer. It was almost 400 bucks whenI
bought it, how much more would it have been if they got a liscense to
use those top secret scanning patents??

> when the center pin is to small to take the stranded wire? Is
> there a special center pin? Any help is appreciated.

1. You can dig around on the Internet to find the proper part number for the BNC connector that properly fits your specified coax.

OR

2. Under similar circumstance, I have successfully drilled out the hole in the center pin with a very fine bit making it big enough to fit the stranded coax center conductor. If it is a crimp type connector, I would recommend soldering the center conductor anyway.

3. I do NOT recommend doing this, but you could carefully trim away some of the strands of the center conductor to allow center pin to fit.

in other news, there's an evil monopoly that has exclusive trademark on
the word, are you ready? ... Windows...

i wanted to the trademark the word "Doors," but i think it's already
taken (showing my age)...

we won't have to worry about bank-scanning arrangements/processes much
longer - as soon as scanner manufacturers bring their equipment up to
1990's levels, we'll all be using scanners with better CPUs running
a much better and capable embedded-OS - and there are enough patent-
and royalty-free mini-DBs to avoid such hassles as patents...

If, IF, that is truly the case, then why don't you do something about it? If you're not willing to run against the local sheriff or town police chief yourself, then help campaign for his opponent. If nothing else, use that printer sitting next to your desk to print off leaflets describing the situation, urging residents to vote against the existing sheriff or chief.

If you don't want to wait until election time, visit your town or county council meetings and raise the issue there. Grab a video camera and videotape officers stopping people on heavily monitored streets. Show that tape at the council meeting. Or start a web page asking others in the area to describe their experiences. Read those experiences at the council meeting.

Get some of your friends together and stage a demonstration in front of the council or mayor's office. Demonstrations in small towns almost always attract attention (especially if you let the press know about it in advance). If you want to avoid a confrontation, yet still attract attention to the issue, hold the demonstration on a weekend when the government offices are closed (the press will be there anyway).

Collect money from your friends to have bumper stickers printed up with cute slogans against unnecessary police stops. Hand those bumper stickers out at community events, especially near election time (nobody elected wants a major issue to pop up near election time, including elected sheriffs and police chiefs).

Again, if what you say is true, there are many things you could do to correct the situation. Complaining about it in this newsgroup does nothing (we're not there).

The part clearly identified in the remainder of the message you quoted from.

> This is only a discussion of the behavior that has
> been described, it is not a hearing. (snip)

No, it is a public discussion about one person's description of a police officer's behavior. In my opinion, that person's description was posted with the intent to incite public opinion against police officers as a whole (which is why the discussion quickly turned from a single police officer to police officers).

> And you cannot truthfully deny that the behavior, as
> described, does occur. So this discussion has been
> conducted in a proper manner.

I cannot deny that police officers harass people? Oh, I absolutely can deny that, and will continue to do so until I see clear evidence to the contrary. Some guy's rant in a newsgroup about getting a ticket for not wearing a seat belt, or another person's rant about getting a warning ticket for a bad tire, is not evidence.

> You can't disregard the reason for the search because
> that is the problem that is being identified. (snip)

As I've said before, we don't know the reason for the stop. But that hasn't stopped some people in this tread from screaming about police harassment, has it?

If you find something simple that doesn't have a patent, you can
patent the idea (suject to the patents offices approval of course.)
Read somewhere recently that some company applied for a patent, that
after you interpreted the technical jargon it had submitted, it showed
they were trying to patent putting lights into PC casings.

The last time I was wrong is when I thought I had made a mistake...

an•ten•na (P) Pronunciation Key (n-tn)
n. pl. an•ten•nae (-tn)

Zoology. One of the paired, flexible, segmented sensory appendages on the head of an insect, myriapod, or crustacean functioning primarily as an organ of touch.
Something likened to this sensory appendage, as in function or form: sensitive public relations antennae.
pl. an•ten•nas A metallic apparatus for sending or receiving electromagnetic waves.

[Medieval Latin, from Latin, sail yard, translation of Greek keraia, insect feeler, yardarm.]
---
an•tennal adj.

antennae

Antenna \An*ten"na\, n.; pl. Antenn[ae]. [L. antenna sail-yard; NL., a feeler, horn of an insect.] (Zo["o]l.) A movable, articulated organ of sensation, attached to the heads of insects and Crustacea. There are two in the former, and usually four in the latter. They are used as organs of touch, and in some species of Crustacea the cavity of the ear is situated near the basal joint. In insects, they are popularly called horns, and also feelers. The term in also applied to similar organs on the heads of other arthropods and of annelids.

Dwight Stewart <BAD99F4A.19D1D%stewart@say.net>...

^ > This is only a discussion of the behavior that has
^ > been described, it is not a hearing. (snip)
^
^
^ No, it is a public discussion about one person's description of a police
^ officer's behavior.

Those two statements are essentially the same.

^ In my opinion, that person's description was posted with
^ the intent to incite public opinion against police officers as a whole
^ (which is why the discussion quickly turned from a single police officer to
^ police officers).

That person did the right thing by bringing a problem the attention of others. The incitement, if any, was incidental. It is in fact proper in our society to bring problems to the attention of others; it's the only way social issues can be dealt with. This is one of the very reasons why our forefathers went to the trouble of guaranteeing the freedom of speech.

^ I cannot deny that police officers harass people? Oh, I absolutely can
^ deny that, and will continue to do so until I see clear evidence to the
^ contrary.

Then further discussion with you will be useless.

The transmitters for Center frequencies are located all around the US or in the world. You have to be near by the transmitter for the controller to hear the controller side of the transmission. If not you will just hear one side of the conversation.

I wonder why the "operating system" or a console to play games on
that can be connected to a TV-set is not patented ?

US patent system sucks. You can legally patent the wheel if you want,
but a patent is not worth anything before you try to cash in on it,
and then it might fall in court.

The worst is, that you are not forced to enforce your patent when you
know about violations. You can wait 10 year until your patent has enough
market penetration before taking it to court. So by being slow you can
make lots of profit.

Lots of folks wait till the last minute to bid, $175 is not to far off the
mark... and it only takes one bidder to complete the sale.

I've offered up quite a few items in much the same fashion, essentially putting
the price I wanted for the item in question, and only looking for '1' bidder...

178. Odd question about scanner sensitivity.

Newsgroup: rec.radio.scanner
Date: 2003-05-04 00:37:49 UTC
From: Paul Keenleyside <nospambcpl8z@telus.net>
Message-ID: <xhZsa.25697$yv1.2025278@news2.telusplanet.net>
Source record: 31606

Here's a question about scanner sensitivity.

I have both a BC780XLT base station and a BC245XLT portable. I tested both outside using the same antenna, but found
on the aircraft frequencies that the BC245XLT picks up the signal better than the BC780XLT. I keep the BC780XLT
indoors (works great as a base station extension to my computer system) and usually take it out with me once and a while. The BC245XLT goes with me.

The other frequencies I normally listen to (154.400 and a few others at around 410 to 452 come in just fine on both using
the same antenna). The antenna is not one that came with either unit, but a general purpose use one with magnetic mount
that I got. When I got the BC245XLT, I bought a good quality rubber ducky for it.

Granted I am near a repeater that are used for 154 and the others I use.

I am about 10 miles from the international airport. There are quite a few tall buildings between me and the airport, but I am at an elevation of about 350 to 400 feet above the airport (which is at 10 feet above sea level). My location is on the opposite side of the apartment building from where the airport direction is (airport is to the west 10 miles downrange at 260 degrees true).

Is there a difference in sensitivity in scanners, and how so? Is there something that would affect a scanner's sensitivity?
Is there some kind of test or adjustment that can be made? A different or perhaps specific antenna? Any sugggestions?

What about extended range (for example some of the locations for fire and police along our highways are about 20 to 60 miles apart), any ideas on that?

New at scanning and am enjoying it alot.

Thanks!
PK

My stinking ar8200 computer cable is useless, but fortunately i have a useless Optolynx.

Can I computer control my ar8200 with the Optolynx or would that be pointless?

183. Antenna question

Newsgroup: rec.radio.scanner
Date: 2003-05-04 03:52:43 UTC
From: Bob Purcell <robspur@mentallyimpaired.com>
Message-ID: <f80ta.753564$S_4.774527@rwcrnsc53>
Source record: 31611

I have a roof.
On this roof is an "antenna".
This "antenna" has a "cable" which comes into the house and lands on the "floor".
This "antenna" cable continues on until it enters my "computer" to allow "Television" channels to come into my "computer".

I would like to increase its "workload capacity" and have the "Antenna" cable enter my scanner providing me with "pleasure."
I would like to "split" the "antenna" cable so that it contuniously updates my "computer" with "Television" programming while at the same time providing additional signal sensitivity to my scanner radio that I crave. The "Television" is absolutely essential in this equation as it affords me the opportunity to become aware of such wonderful gems as: "Bush and other U.S. officials had indicated that coalition troops may come up empty in their hunt for weapons of mass destruction. On Saturday, a senior Bush aide offered an explanation, saying initial information suggests Iraq's weapons programs was geared mostly toward just-in-time production."

Would a splitter do the trick or shall I consider the looming possibility of trying an alternative configuration.
'Preciate you.

Assuming none of your equipment is putting DC voltage on the coax line, I would suggest you just start with a splitter and see how that works for you. It probably will suffice, but if it doesn't I don't see any other "simple" possibilities for you. Post back after you've tried it.

One other aspect., some aircraft comms may be in DUPLEX that is
the plain is on one frequencies and the ground ACT controller
is on another. Here in Boston it seems that at night
the ACT is in simplex for small aircraft on 124.400
and the big jets, airliners are on three (3) different frequencies in the duplex
mode,
for the three points of the compass, 120.600 N, 118.25 W and 133.00 S
to transmit to the ATC and listen on 124.400.
And you do have to be within 5 to 10 miles of the ground side!
Jim

189. Re: Broadcasting out on Police channels

Newsgroup: rec.radio.scanner
Date: 2003-05-04 08:40:25 UTC
From: Jim Mac Donald <jmacdon@mitre.org>
Message-ID: <3EB4D1F9.26530563@mitre.org>
Source record: 31617

There may be Nonstandard tones but for the most part
every one uses standard tone codes AND there are Digital Tone Codes
Some transceivers may be able to use both CTCSS and Digital Tone Codes
for different channels/frequencies. As do many newer radio scanning
receivers!

Here's a a site that supports the Uniden® BC 780 XLT (some of the
info may work for
the BC 785D and BC 250D also)

<http://209.145.176.7/~090/awh/bc-780xlt.html>

Down the bottom is a brake out of tone codes supported by the BC 780
XLT.
The New User FAQ at strongsignals.net also has a section on tone codes.
<http://www.strongsignals.net/access/content/new_user.html#SEC09>

Also the folks over at <http://www.pro-92.com/> a unofficial PRO-92
support web site may have more on the CTCSS/ Digital Tone Code
capabilities of the PRO-92 and PRO-2067, which may be able to handle
nonstandard tone codes! Try posting your question over there.

I don't understand what your inferring to by "special radios", Law
Enforcement and others may
us scramblers on their regular radio channels and they may us unlisted/
non licensed frequencies!

Tone codes do nothing for radio voice security, they simply make it
easier for different users
on the same frequency to share the communications channel, with out
interfering with each other . And for radio scanner buffs, tone coded
squelch makes following the action much more pleasant!

The US patent office has also the wheel in their datase, and if
you have ever had you cat/dog hunt the light spot of your flashlight,
you have been using your flashlight in a patented way.

Sometime on slashdot, there comes a new article with 5-10 patents
that should never have been patents.

I have a "Big Stick" CB antenna on my roof of my house. If I hooked it up to my scanner what kind of reception would I get ? Would I get better than my rubber ducky antenna that is on my scanner now ? What would be my best freqs reception ?
Thanks,
Iowa883

> to transmit to the ATC and listen on 124.400.

I've been a pilot for 15+ years. The only time Duplex is ever used is when talking to FSS (Flight Service Station - these are the people you get weather reports from and to file VFR or IFR flight plans). If you're too far away from the FSS you can call them up on 122.2 MHz and then receive them on the frequency of the VOR which you are the nearest to.

However I have never heard ATC use a "duplex" mode for talking to planes. Here is what you're hearing which probably gave the impression of being duplex. This is common at night time where there is less traffic and less controllers on duty. One controller is controlling three different sectors. The controller in your example is keying up the mike and his voice is being broadcast on 120.6, 118.25, 133.0, and 124.4 at the same time. The antenna site for 124.4 is probably near you as that is the only one you are hearing. The other three antenna sites are located near the center of the North sector, West sector, and South sector, too far away from you to hear. So, you might hear Boston say "Delta 411 decend to one four thousand" on 124.4000. However it was also broadcast on the three other freqs but you were just too far away from those antennas to hear it. But now you can hear Delta 411 on 118.25 say "out of 210 for one four thousand Delta 411". You heard the Deltas reply because he was much higher and in line of site with your radio. This would give the impression of Duplex but in reality Delta hear ATC on 118.25.

In most ranges you'll probably do better with the BigStick than the rubber ducky. since the CB antenna is tuned more for 27 MHz you're going to get good reception on your scanners VHF-Lo range (30-50 MHz).

However you'll do ok in the other ranges (better than the duck simply because you're CB antenna is much higher). But you won't do as well in the higher ranges then you would with a real scanner antenna.

I use to have a CB - StarDuster II antenna. I used it for scanning often as most of our county's Fire/Police were in the 30-40 MHz range. It did very well.

Never enough radios down here in Military and NASA monitoring heaven!
In the shack I have a few of the Radio Shack 4" communication speakers
and really love the sound the produce. I've had them for a few years
and have gotten use to them. The 2" sound like they have much more
treble and no bass at all making them sound very "tinny" and for AM
modes I think its harder to understand.

So lately I'm been going mobile without any external speakers. With
the BC 785's they appear to have more audio (louder) then the 780's so
it hasn't been a problem yet. However when I go to Rocket and Shuttle
launches at the Cape I like to be able to hear the scanners while
standing outside the truck. I'll need to find a solution to my external
speaker problem before the next launch because even thought the 785
seems to have better audio it still wouldn't be loud enough to hear
while standing outside of the truck.

On another list I got a very good suggestion from someone. Here's the
idea. Build a small audio mixing circuit (easy to do with a few 10K ohm
resistors) and feed the audio of the three scanners into a low power FM
transmitter. Now while mobile I'll be able to receive the scanners
audio on the cars FM radio and have better audio and the ability to Turn
UpTheVolume!

first, you would expect the 27Mhz freq to be the best. I am not familiar with a "big stick", if it is a 5/8 loaded antenna it will be very inefficient on other freqs.

That being said, anything is better than a rubber duck. It will perform OK for strong signals, but don't expect it to be a world beater.

The real answer is give it a try, you have nothing to lose.

Wow Fred the next time I go up remind me not to take you with :-)
The transmitter for that tower is wowya in that tower.. Now theirs a
concept!! :-) It is also only using 5watts to 15watts and just may not have
enough power to make it to John's scanner. but if John was up 15,000 feet
it would be more then enough.. John put up a Scantenna at least 30feet in
the air and you should have no problem hearing your local airport.

http://users.cis.net/kingpop/Scantenna.htm

I hear Pittsburgh Airport 73 miles away just fine because I have a
Scantenna 40 feet in the air... I don't hear them at all on my mobile rig
in the car..

And Fred a center is not for controlling your local airport!! It's to
navigate and setup flight routes, i.e. a center is the traffic cop of the
air..

You can't patent an idea such as having 10 banks of 100 channels or being
able to lock them out individually or not. You can patent the software that
does this though, so as long as Icom or whoever start from scratch and write
their own software they can do what they wish. I still maintain that the
new method of Icom's has some advantages but as always its 'horses for
courses'.

If your CB antenna is fed with the thin "CB" coax, ie; RG58, then you will experience a lot of loss at the higher frequencies, 400MHz & up. If you have the heavy coax, ie; RG8, then it will do better, depending on how long it is.

Hey Bob that TV antenna is not setup to receive the wide band your scanner is using.. You really need to go up on that roof and put another 5 feet of antenna mast up there and then put a Scantenna on that :-)

http://users.cis.net/kingpop/Scantenna.htm

Then you will have the right tool for the right job!! Please don't Mickey Mouse it to your TV antenna or use scanner and HAM guys will point at you in public and laugh :-)

Thats very doubtful to say the least, aircraft are just not set up for
duplex. More likely is that at night 124.400 is switched to relay the other
frequencies. Often when quiet, a single controler will transmit on multiple
freqs. but of course aircraft still use their own. Same thing happens with
military as towers transmit on VHF and UHF at the same time.

If you are scanning cell phones, 900 MHz and up cordless phones, etc., the rubber duck is actually better than the CB radio antenna, which is too long to pick up the shorter wavelengths efficiently.

Most TV antennas I've seen are broadband log-periodic types, made to tune channel 2 through the UHF channels. That's roughly 54MHz through close to 800MHz.

The negative aspects are: its directional, its polarization is horizontal (most scanner traffic you want is vertical), and it doesn't cover 30-50MHz well. However, as a simple trial for the guy, I suggested he stick a splitter on the coax and see how it works for him. That's a lot easier to do than outside antenna work on the roof. If it works for him, fine. If not, then he can go the more difficult route.

Yes. I forgot that option. Works well, but costs more $$ for the
adapter.

Rusty's comments are correct except for one small items. Eventhough
its not used very often Aircraft (including single engine Cessnas) are
setup for Duplex operation. Compete with 2 NAV-COMS and an audio/mix
mixer/patch pannel most aircraft have full duplex comms.

If you're flying in areas where you're too far from Flight Service
Station to receive them direct they will broadcast on a remote site,
usually located at VOR's. So you would Transmit to FSS on 122.2 but
would receive FSS on a VOR freq which you are near.

Being a pilot for over 15 year I've done duplex comms with FSS 1000's of
times, especially when flying in Pennsylvnia! However I've never ran
into a time where duplex was actually used by ATC (FSS is not ATC).

My ScanTenna pickups up aircraft nearly 300 mile away. Everyday I'm listening to F15's engaged in mock dog fights over the Atlantic in an area up to 200 miles north of me. Also with the same antenna I'm listening to bombing runs on a range about 150 miles south of me. Even the $100+ discones can't come close.

As far as an Omni-Directional ant goes you can't beat a ScanTenna. I use mine all the time to listen to 30-50 VHF Skip, 118-136 AM Civil Air, 138-144 AM MilAir, 225-400 AM MilAir and some 800 MHz trunking (BTW it pickup up an 800 MHz trunking system that's nearly 50 miles away just fine!).

Currently I have 2 ScanTenns, 1 AntennaWarehouse Scanner Beam (another really nice antenna), and 1 Create Log Periodic ($300 ant, its good but as far as receiving receives no better than the $60.00 AntennaWarehouse Scanner Beam). I find myself using the ScanTennas more than any others.

I bought my ScanTennas and ScannerBeam from www.AntennaWarehouse.com and they have great service.

Thanks for the nice review! I have three questions based on what you
have said.

1.

> As far as an Omni-Directional ant goes you can't beat a ScanTenna.

So these are directional, would it still cover the 60 miles of ground
area here in the valley as well as pickup the air freg's from the LA,
Oakland Centers as well as the military stuff working around the desert
from all these research centers?

2.
1 AntennaWarehouse Scanner Beam (another
> really nice antenna),

What's this and what's the cost.

3.

> I bought my ScanTennas and ScannerBeam from www.AntennaWarehouse.com and
> they have great service.

I'll check them out next week when I get ready to buy. The SCANTENNA
was $39.95 plus $10 S&H!

These are omii-directional antennas meaning they receive equally as well from any direction (north, south, east, west) as opposed to a Beam antenna which only receives well from the direction its pointed.

I use one to receive well over 100 miles in any direction so it should do equally well for you.

>
>
> 2.
> 1 AntennaWarehouse Scanner Beam (another
>

You can see a picture here: http://users.cis.net/kingpop/Scan-log.htm, this is also the site where I bought mine from. They are $56.00 plus a few bucks for shipping. Now remember this is a directional antenna and receives from only one direction. It will receive somewhat better from that direction then the ScanTenna would however you should use a TV antenna rotor to aim the antenna at the area you want to receive from.

This is a fairly light antenna so a cheap rotor will do just fine. I use a Channel master rotor which new at HomeDepot sells for about $100.00. Mines been up 2 years and have seen several tropical storms (I live in Florida) as well as 60+MPH winds. I haven't had a problem yet.

JER1538A wrote:
> SCANTENNAS ARE JUNK COMPARED TO A DISCONE

??? You're kidding I hope. I've tried several Discones from cheap $25.00 ones up to the $119 one. Discones just don't cut it.

As far as my experience as shown Discones are the most over-rated antenna being marketed today.

Discones have 0 dB gain (as advertised), discones have too high of a radiation angle for effective longer range reception.

The only good thing about a discone is that is very broadbanded from an SWR standpoint. Originally Discones were designed for Civil Air and Military Airtraffic control as they needed an antenna with low SWR thur a large ranges of frequencies. Also for a ground station to communicate with an aircraft a higher than normal radiation pattern helps and again why the discone was developed.

The statement should read:

DISCONES ARE JUNK COMPARED TO SCANTENNAS

Thanks George,
I didn't understand the "omni" part so yes the SCANTENNA will work well for me at this time.
The other thought is very high wind most days here in the desert. We have 40 plus mph winds here a lot of the days most of the year. Do you think all those parts will standup?

hi George,
Thx for the info ,
When the wife got tired of me fussing about not hearing things like I wanted on my old faithful and friendly bc170 a couple of weeks ago and told me "why don't you get a new one?"
:-) got to love the gal.,maybe it was the roses I sent her for her birthday the month before..:-)
So with a twinkle in my eye I started looking at all the places google could dredge up.....thinking this'll be pretty easy since I had looked at ratshack a couple times at the new units when everyone was saying cell phones were going to be blocked out, yeah , its been awhile since I had given serious thought on changing radios, :-)

Little did I know what a world of change had taken place while I wasn't paying attention...I thought there shouldn't be piece of cake making up my mind..hehe
it was staggering to say the least, so many units , so much a variance in prices and not really knowing much about the advancements that have been made in the scanners since I bought the bc170 ,which was around 1991 or so, I decided to get educated,
I went to google and started reading the newsgroup...want to know something go to the users right?
I saw what was mentioned pretty much the most and I made my first post about the differences of the 780xlt and 895xlt since they seemed to both pretty well thought of ...and to ask ya'll help make my mind up..:-)
Thx again to all who answered my initial post if I forgot to thank you personally in email...

Thought I would give a little feedback on the vendors I settled with in making the upgrade from dino...
with ya'll's help I think I did ok....sorry for being long winded, hope this info is useful to someone out there...like the old man said "eat the fish and throw the bones out" if it doesn't help ya....:-)

I settled on the 780xlt
I found what I thought was a fair price being alot of places had them back ordered until end of May
780xlt picked up for 309.00 shipping included (brand new -not refurb) at www.logjamelectronics.com
feedback :
pretty fast shipping around three days, prices seemed pretty fair, other places I looked at where the radio was cheaper either was a refurb unit or had high shipping which killed the deal for me....would definitely look at their site when pricing something else
Alot of times I order something it takes up to 8 days to get it to where I

live so I was surprised on all the guys I dealt with this time around....

I live way out in the country in south Carolina , around 30 miles from the sheriffs office and 10 miles from town with some hills and dells in between so I knew I would prolly need an outside antenna,
so I purchased one through www.antennawarehouse.com on ebay for 40 shipping included,
feedback:
Antennawarehouse really tries to get your antenna to you straight as a ruler, when they get it they jam-pack the box with styro-peanuts and then they send it out to the customer.
UPS destroyed the first one sent out, package was shaped kinda into a horse shoe, sent it back and called up the friendly folks up there in iowa and the guy on the phone couldnt have been nicer, as soon as they received the notice from UPS, they had another on the way turn around was like 4 days from first order to getting the order.
super fast set-up and hook-up all totalled i figure 15 minutes from box to back of receiver (not like some antennas i have had experience with, bags of elements and hardware and broken english instructions, (stacked moonrakers anyone?)

I wanted to try computer control so I ordered the 25 foot cable and so I could choose where I placed the radio and computer as far as distance wise away from each other www.scannermaster.com dont remember the exact price but it was 13.00 and some change

Also picked up the butel software based on what i read here and what i found at www.Strongsignals.com ,another place that was mentioned here.. (a little nervous about trying it out yet, i havnt figured out what happens after running the software and then when you disconnect from the computer and turn on the scanner, do you have the freqs you had on the computer loaded in or does it revert back to what you had when you didnt have it hooked up?)

Imagination? To imagine - nothing?

When - there is no evidence of something?

Isn't the person thinking up the something, when there is no evidence of
it, more imaginative?

I don't make up WMD. The Bush Administration does.

They have more imagination than I do.

burr
if you go to ebay and do a search for the scantenna, antennawarehouse
truckload sale will come up, 40.00 flat fee and no shipping for the same
antenna, call the number on the listing , tell them you want the ebay
scantenna and they'll ask what the price was and you'll have it in about 3
days...

Unfortunately, for both the last Sheriff and city police election, (one of the local departments anyway, as there are a number of small towns bordering each other) they ran unopposed. The biggest problem here is that it's not just the local, County, and State police. It's in the County Court system, in the local lawyers, etc. It's in everything. There in no way to win a case that comes up against anything that has to do with area government. In order to get any kind of fair trial against any of this crap, it would have to be tried in a court of a neighboring county, and unfortunately, nobody I know has the cash to foot such a bill, if that can even be done.

> Again, if what you say is true, there are many things you could do to

> (we're not there).
>
Understandable. My complaints only stem from trying to prove a point. If others in the group here were a little more open to things, I wouldn't have had to argue and complain about it so much to get them to see where I was coming from, and understand that corruption does exist in the world. Some may be lucky and not have to worry about it where they are from, but it is here, and I deal with it every day. Those that don't, should consider themselves lucky...

So far mine seen a few 60 MPH gusts but unless we have a tropical storm we really don't have much wind. The elements are made out of the same stuff they use for TV antennas and isn't the strongest. The two longest elements would be the weak point for you however I think you would get a few years service without problem. The nice thing is this, the antenna is cheap enough that if anything ever happens to it its replacable.

OK, now we are getting somewhere. I did not know what type of action, if any, that could be taken against this.

As I had stated in a reply to Dwight, it's not just the police. It is also in the local court systems, lawyers, etc. Pretty much all the local government. For example, if you are accused of something, and can't afford an attorney, you have the right to a court appointed attorney. Honestly, you are better off not even having one. They do nothing for you. Asking for a court appointed attorney is like pleading guilty. I don't know of ANY cases locally that have ever been won by someone with a court appointed attorney. People loose more cases than they win around here. Why? Because even if they are innocent, the county has to make money some how! Fines, Fees, Tickets, etc. It makes the county budget go 'round....

Something that might disgust some in here... The HEAD judge for the county is a pot-head and coke addict. It's common knowledge, but does anything ever get done about it? Hell no...

Here's another example of how bad it is around here...

An interesting bit I heard on the scanner about a month ago. A citizen calls in a 911 complaint about a car that was speeding excessively. They didn't get the license number of the vehicle, as it was going too fast. The citizen had attempted to get the plate by speeding up to try and catch up to the other vehicle, but gave up when they had reached 70MPH and still

couldn't catch up For the knowledge of the group, the posted limit on the particular road is 55. The citizen was able to give a description of the vehicle, however. An officer eventually did find the vehicle, and tailed it for a bit after reading the plate to dispatch. Dispatch didn't give out the plate info right away, but instead questioned the officer if they knew who that car belonged to. After indicating that he didn't, dispatch told the officer to do what he wanted, but that they wouldn't pull the vehicle over if it was them. When questioned why, they read back the plate info. Guess what... The vehicle never got pulled over, even though it was doing in excess of 70MPH in a 55MPH zone...

Why you ask? Simple. It was the new car of one of the county judges wives... The officer wasn't familiar with her new car. Had he have been, I'm sure that he would have never even bothered to radio in the plate info and just let her go... Nice area I live in isn't it... They look-out for each other and shit on the people that pay their wages...

>
> >and to meet their quota (That thing that every officer claims doesn't exist,
> >but we know otherwise; if they don't get a certain number, they will never

> 'quota'...did you ever think that there are literally thousands of cops out
> there, right now, who haven't touched a ticket book in years, and these people
> still get promoted, and serve honorably?

That pertains to ROAD officers. How those in the office get promotions is beyond me.

No Quota? For some strange reason, about the same time every month, you here a LOT more traffic stops than other times of the month. If it isn't to fill their quota, then what the hell is it? Just that time of the month? Do officers all get their "periods" at the same time every month? That's gotta be it! They're just really cranky around that time of the month, because of their "period," and tend to stop people more... Humm...

AOR have a bank linking system that seems to work
not a easy as the Uniden system of just hitting the number keys
you just set up the bank links for instant recall or you can reset them
at any time

and you can also adjust the bank size from 10 channels to 90 channels
with the corrisponding opposite bank changing to match

If you don't already have the programming cable and software
then by all means get them. It will make programing this
radio a lot easier.

here's the soft ware <http://www.grove-ent.com/SFT7.html> and
<http://www.digital-laboratory.de/> some of theas are free ware (Goran
Vlaski's IC-R2
Programmming utility 1.01)
also the cable <http://www.grove-ent.com/ACC3.html>

Get a four (4) pack of NiMH AA cells this will(with the two sets of
cells),
give you about twelve (12) hours of listening, time!
The stock NiCAD's will go about five (5) hours on a charge.
have fun with this radio

Do you have any trunking radio activity in your
area. This radio will not trunk track, it can pick up the trunking systems
and you can try
to listen, but the R-2 won't follow the conversations.

- get bob parnass' tk2 at http://parnass.com - much better than the
other packages i've tried - and it is cross-platform (good if you
use Linux)... don't pay for software to program the ic-r2!!!

> Get a four (4) pack of NiMH AA cells this will(with the two sets of
> cells),
> give you about twelve (12) hours of listening, time!

- excellent advice ... there are now 2100mAh AAs, but i use 1850s in
my r2...

- btw, you can get a great case w/belt clip for the r2 at
scannerworld.com - at $20 it's cheaper (IIRC) than the manuf's
and is (IMHO) much better...

Thanks,
Maybe I can reinforce it a little when I put it up. I look around and see a lot of TV antennas all messed up around here but I'll see what I can do.
I'll go ahead and order it when I get some checks in this week. I have some kind of scanner antenna I got a RC that I'll put up down south so I can plug my 245 in down there.

Burr

That's what's happening. I can hear the controller and aircraft on 124.4 ,here in Bedford but I'm not close enough to the 118.25 ground transmitter site to hear the ATC there, but hear
the aircraft on 118.5., 126.600 and 133.00. How about simulcast simplex on VHF and Military UHF
ATC channels where with out tow radios or the capability to receiver UHF AM it appears
the ATC ground station is talking to dead air! Dose this happen much? And I under stand it's done
so the civilian aircraft will be the loop when ATC gives flight instructions to the military aircraft, on
UHF

One other aspect of this that we haven't' discussed I am aware of is the controller is not located here at Hanscom field
or for 124.900 at the Manchester, NH airport where his transceiver is But they are in Nashua, NH at the FAA Air Traffic Control Center ATCC working the radios remotely.
Thanks
Jim

That is exactly right. And another reason its done that way is when a
Military aircraft is handed off to a new ATC controller or to the Tower
the Mil aircraft will hear the controller talking to civil aircraft as
well. Works both ways..

I made a python program,
http://jidanni.org/comm/radio/programs/validstep that finds valid
steps for the given frequencies, e.g.
$ validstep 139.20875 .123 .720 144.44
139.20875:
no valid step
[5]between 139.20500 and 139.21000
[6.25]between 139.20625 and 139.21250

.123:
warning: below 0.495 ...
no valid step
[5]between 0.12000 and 0.12500
[6.25]between 0.11875 and 0.12500

.720:
9

144.44:
20
10
5
It works for the ICOM IC-R2, but can be made to work with others.

254. Scanning Banks

Newsgroup: rec.radio.scanner
Date: 2003-05-05 04:02:01 UTC
From: info@nyphotopress.com
Message-ID: <a8bbab41.0305042002.76e02567@posting.google.com>
Source record: 31582

Hi there,

I have 6 frequencies stored in bank 9 (channels 00 thru 05). I want my PRO-95 to continuously scan through these 6 frequencies. So, the guide suggests that I just start scanning the channels by pressing SCAN. So, I am in manual mode and I press SCAN and the scanner displays storage banks.

So, I turn off all banks except for bank 9. Display shows something like this:

```
...........9
...........+
Scan UP...
```

After that, nothing happens and the scanner obviously does not scan. Random pressing of buttons did not produce any results.

HELP, HELP! I will be grateful for advice on what I am missing. Maybe I forgot to press some button. Or maybe I am doing something wrong in the first place -- I am new to this thing.

Thaks so much for your help. If you want you can e-mail me directly to info@nyphotopress.com

I read some article a while back in some magazine about how some of the
car companies have tried, and sometimes sucessfully patented stuff that
was already patented by someone else years earlier. The best part is
that one of the bigger patents was filed using the original guy's own
drawings with his name on them! They actually thought about fighting it
in court, but a mock jury's reaction convinced them to settle for what
the guy asked for along with all his court costs, and agree to pay him

all the royalties they had collected from the other car companies on the item. Made the guy like $20 million overnight, and with more to come.

Seems like the Feds would be prosecuting them for fraud, if nothing else. But they rarely do..

Alecsey Boldeskul <a8bbab41.0305042002.76e02567@posting.google.com>...

^ I have 6 frequencies stored in bank 9 (channels 00 thru 05). I want my
^ PRO-95 to continuously scan through these 6 frequencies.

^ 9
^ ....+
^ Scan UP...
^
^ After that, nothing happens and the scanner obviously does not scan.

With the display as shown the scanner IS scanning. It may be simply that nothing is being transmitted on those frequencies so the scanner does not stop on any one of them.

With the scanner scanning as you have described, press the MAN (or manual) button -- the scanner should stop on one of the six frequencies you've programmed. Then press [0] and the manual button again. Now you are in manual mode on channel 900. Make sure that the letter "A" does not appear on the top line. If it does, press the ATT (or attenuate) button. Press the manual button five more times and check the same thing on each channel. Also verify that you have entered each frequency correctly.

Make sure that you have an antenna on the scanner.

Frank

Any small radio which I have purchased to date, either, Sony, Grundig, Panasonic and Roberts (Shortwave models/AM FM etc) have all been, without exception destined for the trash can.
I dont recall a time when any portable shortwave receiver has come up to my expectations, either reception wise or other.
Every single receiver which has come in to my possesion has been crap basically and please dont tell me a small portable is okay for shortwave because I wouldnt beleive it.
My trash can has held the Sony 7600 down the line to the Roberts analogue receivers quite simply because they failed to perform as the glossy marketing suggests.

When the batteries are taken out of the Sony 7600 GR for an extended period the clock/pre-sets go back to factory default....

Im thinking of signing a cheque for a brand new Ten-Tec 340 or Icom R75 or an NRD 545....BUT...Should I?

I have a keen interest in world band radio and secondary aircraft frequencies but to date I have failed to sign the cheque...Is it, or will it, be worth the money lashing out on a semi-proffesional radio when previously all my past attempts at world band ended up in the skip (Trash Can) etc....

You know, it's BS like this that discourages people from being helpful at all. Why should I bother if the only thanks I get is some dumbass with his red pen circling what he or she thinks I did incorrectly?

People: If I post erroneous information that's one thing. But if the only thing you can find wrong is improper word usage, go piss up a rope. Seriously. Take it over to alt.anal.retentive and share it with others of your ilk. Go be a substitute school teacher if marking mistakes gets you off. In fact, why not drive around the rougher parts of your city, look for some gangbangers spraypainting a wall and make corrections to THEIR spelling and THEIR grammar so you can see how greatly appreciated you really are.

You may think you are being helpful but in reality, you are clouding the issue with your off topic responses. No wonder these groups are full of trolls and freaks - no one with a valid question has the time and patience to wade thru all this crap to get their answer!!!!

Please. Spare us your superior intellect and rapier wit. We stupid people like our lousy spelling, bad grammar and improper word usage.

Thank you.

I have always been in favor of finding the exact part to do the job and carefully solder the center pin in this case. My opinion only of course.

I am interested in buying a scanner for listening to transmissions at Pearson Int'l airport.

First question is do I need a license and are is it illegal to have a scanner in your vehicle, since I will be listening parked by the airport.

What are the main features that I should be looking for and e.g. frequency range, channels, memory etc.

Are there websites that can help me with glossary and a beginners tutorial to show me important features and how to use them?

Any help would be greatly appreciated.

Thanks,
Dave

Is the DJ-X3 a useless scanner to listen to in Toronto,Ontario ?.

Since the police have gone trunk I can hear fire dispatchers on police frequencies.

Is there any thing else to listen to with the DJ-X3 ?

Thank-You

P.S. Anybody in Toronto,Ontario with a DJ-X3 that i can perhaps clone with ?..

Wellsir,

Here's how it's gonna play out for you. You're gonna pay your ticket and go up to the police station and ask the desk seargent that you wanna see the chief. After he's done laughing at you (because they hear at least a dozen such requests every day) he'll want to know why. When you tell him he'll laugh even harder at you and ask you to take a seat. Within about 30 minutes, an older, graying officer will appear with a whole collarfull of brass - he's the watch commander. He'll speak with the desk seargent and then he'll look at you with a knowing look and then he and the desk seargent will talk a bit longer. The deskie will nod and turn to you as he invites you back up to the desk. Then the watch commander will introduce himself and ask you to step into his office, maybe even offering you a cup of coffee on the way. All smiles and pleasantry. You'll go in and he'll shut the door and invite you to sit down. Then he'll take his seat behind that big desk, put his very shiny boots up on it and look at you for a moment or two...

And then he'll let you know exactly what you can do with that scanner. And what will happen to you if you don't. He'll tell you all about the time some poor slob got his car stolen and because it had a scanner in it the bad guys got away. He'll ask you to imagine the consequences of armed felons rampaging around town in your car listening to your scanner. He'll question your reasons for having it over and over again. And you'd better have some smarter answers than "because" or "I don't know" because in case you didn't realize it, your scanner was as good as confiscated the minute you walked into that cop shop to file your complaint.

You'll leave his office feeling about knee high to a piss ant and he'll escort you back to the desk officer, who will escort you to your car where you'll have to hand over that scanner or face another ticket. Then he'll smile, ask you to have a nice day and drive safe. In about 6 months at the next surplus auction, if you're lucky, you might get to buy your scanner back.

But hey, why not go ahead and experience it first hand? It's true what they say: There's nothing like being there.

Depending upon how tight the coupling is in the input circuit, you could see differences. The portable may pick up stations a little better in this situation, but I don't think that you would see a difference, if the antenna was cut for the air band. A simple formula is [234/(F, in MHx)] / 12. This will give you the quarter wave length of the antenna, in inches. For the radials, substitute the number 237 for 234, or multiply the first quantity times 1.05.
I am thinking, that on a good antenna the portable unit would be more susceptable to IMD problems. That was my experience, when a friend brought over his unit. It seemed at first that the BC245 has worse sensitivity with the roof antenna, than with its whip. This wasn't really the case; actually, desense was occuring, because the RF stage was being driven into gain compression by the many signals appearing at the front end. Consider the bandpass of a front end just like the aperture of a telescope. The wider the bandpass, the larger the aperture, and the greater the signal power reaching the first stage of your receiver. With a portable unit, compromises are usually made, in order to conserve battery life. This doesn't have to be the case, because most of the Motorola portable transceivers use a doubly-balanced diode ring mixer as the 1st mixer. The problem here is that a minimum of +7dBm (5mW) of LO power is required to drive the mixer. The result is that the front end of these radios is fairly bulletproof.
I hope this clears up a few things!

I use adaptors for non-critical low frequency tests, but if this is a VHF/UHF application, you could lose a couple dB of signal, especially with those Radio Shack RF adaptors. I gave up on those things awhile back. I remember buying a couple of their mini-UHF adaptors, and having the internal center not even making contact inside of the adaptor. With their F to BNC adaptors, the mechanical tolerances vary widely enough, to the point where you can't even connect them up, because they are almost 1mm too large in diameter. They used to not be so bad.
I am not sure who their supplier is, but I have even purchased switches that self-destruct when you try to solder them.
Oh, one more thing.....the soldering tips from Radio Shack last an average of about 8 hours, before they start to corrode from using Rosin Core solder. Weller, Pace, and Metcal tips last an average of 3 years.

Check out this site: http://www2.faa.gov/ats/ata/ata100/120/stdatafiles.html

Looks like you can order this data on CD or apply for a login ID to their FTP server. For a fee. An undisclosed fee. A call us and we'll tell you while you are sitting down fee.

I'm very interested in this, but they don't go into pricing on this page. Has anyone here recently purchased the CD? If so how much was it, and what did it include?

Also, are there any public sources that host these same files? Not looking for sites with this data on them - I know about those already. I'm talking about the files themselves.

Thanks.

You sound a lot like me. I had not purchased a scanner in 10 years. When things started moving to trunk systems, I just listened to the screech of the data channel that changed every night. Lot's of channel locking and unlocking.

Finally purchased the 780 and the ARC780 software. I can't be more pleased. What a great decision. As far as you question about saving the settings after you turn off your computer, here is how it works. When you program your software, it saves as a .mem file on you computer. It will be there every time you start up the program. You can even save different .mem file is you like. You use a download feature to send the freq into the scanner trough the cable to program the scanner. Conversely, you can send scanner functions back up to the program. It works both ways. When you turn things off, whatever was programmed stays.

Good luck and enjoy your new scanner.

Hello All,

A Friend of mine has a BC785 Scanner, and I went over to visit
and noticed that the display was almost unreadable. When I asked
him about this, he stated that he was unable to find any reference to
adjusting the contrast of the display in the manual. He can only adjust
the brightness.

I thought that was very odd. And having seen it, it looks almost
unreadable. You have to really get close to the display to make it
out. Is this common with these scanners?

Can anyone offer some suggestions on howto change the contrast
of the display?

Thanks!

I know that from time to time many people on various newsgroups and email lists ask the question "what pre-amp will improve my scanners reception?". The typical answer is "they don't work, they'll overload your radio". Well I wanted to find out for myself. To my pleasant surprise it actually works. It improved signals in both the MilAir and Civil Air bands. Yes there were some problem areas but for the most part it worked well.

I wrote an article of my experience with a Radio Shack antenna mounted amp complete with pictures. You can view the complete article at http://www.milaircomms.com/antenna_mounted_amplifier.html

Actually, it's worse than that: I was in comp.periphs.scanner, got distracted, clicked back here, read the message and made the inane comment just like I knew what I was doing.

My apologies to all for brain death.

I can't think of a single reason to buy the 2006, and I own both scanners. I can think of a lot of reasons to buy the 780. The two biggest are the alpha/numberic dispaly and the available software to control it. The displays on the 2006 are getting weak and almost impossible to read. Go for the better choice the 780. You must not need trunking capability now, but may in the future. gill

While you do have a bit of a point, it doesn't cover all of it.
One of the reasons these groups are full of trolls and freaks is
because of over-reactions from such overly sensitive people such as
yourself. It just entices them to more. Loosen up!

My experience is different from what some others here have said. Years ago, I hooked a CB antenna (Solarcon A99) to a scanner and was very satisfied with the performance. On the upper frequencies (800MHz range), there was no sharply noticeable performance increase or decrease. However, on the lower frequencies (500 MHz and below), the performance increase was dramatic. I heard stuff never heard before. An antenna like the A99 has a lot of wire inside and that much wire in the air is certain to pick up more signals than a smaller antenna. By the way, I also did the same thing with my shortwave receiver (with a preselector) and again was very happy with the performance increase.

Ever since the fall of Baghdad, everyone's been asking where's Saddam
and where are the weapons of mass destruction he allegedly had. Fair
enough. But the question that intrigues me the most is this: Where on
earth are his famed look-alikes? If Saddam is dead, did they all, to the

last man, die with him? And if he's slipped out of the country -- to
Syria,
Belarus, wherever -- did he manage to take each and every one of his
replicas with him? Are there, even as we speak, a dozen Saddams
sadly sipping vodka (doubles, no doubt) in some seedy bar in Minsk or
Vitebsk?

To tell you the truth, I was always a bit sceptical about this
explanation.
First of all, in the 38 years I've been around on this planet, I've yet
to
see any human being with an exact body double, let alone several such
human replicas so perfect in every manner as Saddam's were said to be.

But the psy-ops didn't end there. Throughout the war, the Pentagon
used the media to spread disinformation about the course of the
fighting, inventing civilian uprisings where there were none (Basra),
chemical weapons factories where there were none (near Najaf), Iraqi
anti-aircraft fire falling back onto earth to kill civilians (rather
than US
missiles being responsible), and bizarre claims about Iraqi soldiers
"pushing women and children on to the street" and firing at "coalition
forces" from behind these "human shields." Though the last claim has

by now entered war lore, there is not even one credible eyewitness account from an embedded journalist to substantiate this charge, let alone establish that this was a widespread, pervasive Iraqi tactic. What

the claim did, however, was to shift the blame for civilian deaths away from the invading army and on to the defenders.

The most impressive psy-op of the war, however, occurred on its last day, when US soldiers toppled a statue of Saddam Hussein in Firdous Square, Baghdad. The square is right opposite the Palestine Hotel where foreign journalists were staying. All US TV stations showed carefully framed, close-up footage of what seemed like a largish crowd toppling the statue with the assistance of a US army vehicle. The footage was shown live for hours, repeatedly broadcast throughout the day, especially by CNN and cited by US leaders as proof of the 'legitimacy' of the war.

Had TV cameras shown a long shot of Firdous Square, the impression the toppling would have created would be very different. There is a long

shot posted on the web
http://nyc.indymedia.org/front.php3?article_id=55384&group=webcast
which shows a largely empty square cordoned off by US tanks. Small clusters of Iraqis outside the square can be seen watching the toppling of the statue, as silent spectators rather than active participants.

Now, the question is, who were the few dozen Iraqis trying to bring the statue down? Obviously people the Americans trusted because the footage clearly shows some two dozen boisterous men clambering on top of the US army vehicle and charging at the statue. Remember, this was barely ten days after the suicide attack in central Iraq which claimed the lives of four US soldiers and a few days after nervous, trigger happy marines had mowed down a whole family when their car didn't slow down at a checkpost.

But even if the statue topplers were men the Americans could trust, who were they? Photographs doing the rounds on the Net strongly suggest they were members of Ahmed Chalabi's Iraqi National Congress militia who had been flown into Nasiriya on April 6. One INC man in uniform shown with Chalabi at Nasiriya reappears in civilian clothes in a Reuters photograph from Baghdad on April 9, the day the statue is toppled, celebrating the entry of US soldiers. Readers can view and compare the two photographs at the same website mentioned above.

The International Committee of the Red Cross has again called on U.S. military forces in Iraq to allow its staff complete access to Iraqi

prisioners of war. An ICRC spokeswoman in Baghdad said so far, the humanitarian organization's staff had not been given sufficient access to Iraqi POWs. She called on the U.S.-led coalition to comply

with the Geneva Convention for dealing with prisoners of war.

Also in his shop was Saad al-Iraqi, who said he saw soldiers grab and
shoot a youth
two days earlier. 'This is not a good thing,' he said 'because we all
have guns now
and if the Americans can kill our people, we can kill the Americans'.

Muthana answers the inevitable question: 'What do I think of the
Americans? Look at where my foot used to be, look at my dead
brother and the rest of my family, with which I do not know w
to do. I have a wife and seven children who were all right, and
now? That is what I think.'

This is nice.. Under Saddam, Iraqis had the freedom to own and bear
arms (something that at one time was also allowed in the United States
long ago) now, the US has taken that right away from Iraqi citizens.
The US has taken over Iraq radio and television, and in broadcasts:
"Iraqis were told not to carry weapons and thus "risk their lives."

Also, in response to the daily shooting and murdering of Iraqi children
by "rambo behaving" US military...
"Please warn your children not to gather around coalition military
vehicles in the streets,"

While American news networks no longer cover the escalating war in Iraq
and Bush states that the war with Iraq is over, more US troops are being
sent to Iraq:
The U.S. military command has announced 3,000 to 4,000 additional U.S.
military police and
infantrymen will enter Baghdad within the week to join 12,000 troops.

Rumsfeld lives like a KING. Everything that Rumsfeld says Saddam had,
seems he has it much better
Read how this bastard lives, then keep in mind how you the taxpayer have
to live in comparison:

Why don't you try an external antenna AND a antenna tuner!
My Uniden® CR 2021 and the follow on Radio Shack DX 440
perform as will as Kenwood ham radio transceivers! When they
are connected to a tuner and 50 to 70 feet of antenna wire up about 40
feet.

Sorry your having such trouble with your portables. Do you reside in
an
aluminum sided house? Dose your residence abut a high tension power line?

Both causes of poor reception.
Just take 15 or 20 feet of weir and wrap or clip it, the stripped end,
around the
telescoping whip antenna or if the portables have a external antenna jack
connect the wire there with the appropriate jack and see if this improves
your reception!

You will defiantly need an antenna tuner and a long wire
antenna to get any better reception out of the more expensive table top
HF communications receivers.

At VHF, transmissions are almost 'line of sight'. You can hear the pilot at considerable distance, as the aircraft is high above your horizon. The tower will be below your horizon, and is running low power. It's not unusual to find that, for example, you cannot hear your local tower 3 miles (5km) away as it's behind a local hill, but that you can hear the tower of a different airport 20 miles away in another direction. Some magnet mounts blow off at highway speeds, and scratch your paint. Some are better than others. The glass mount ones do not work very well.

Radio Shack sells a dual suction-cup mount, that you can stick on the inside of the window, and use your stock antenna. This works as good as any, and is extremely stealth, so someone doesn't break into your car, to steal your radio.

TIA

If your planning on a glass mount between the cab and camper shell on a
pickup dont do it. I have seen cellular antennas mounted this way break
the windows onthe shell or truck. the camper shell moves seperate from
the cab.

Good question. As to where is he now? Well, the NY Times this AM says he got away with $1 billion in cash several days before the US attacked. Wonder if the much discussed $600 million was part of that? Anyway, with that much cash to hand out, he could be anywhere.

DIAL 21 and DIAL 22 now flying a CAP mission over Central Florida.
Hereï¿½s your chance to listen to a CAP mission. I started recieveing
them at 0945 EDT, not sure how long theyï¿½ll be on station however there
is a tanker on the way.

Hereï¿½s todayï¿½s active CAP freqs:
265.4000 ï¿½ NORAD
148.1250 ï¿½ AM NORAD VHF Freq (yes I realize this also is used for Civil
Air Patrol FM repeaters)
142.3000 ï¿½ AM Air-Air
134.0000 ï¿½ Jacksonville Center ATC
273.5500 ï¿½ Jackonsville Center ATC

Go get themï¿½.

George

> range, channels, memory etc.

In some states, it is illegal to have a scanner in your vehicle. It is
sometimes possible to get a permit to have a scanner in your vehicle.
Check your state motor vehicle regulations.

If you have an amateur radio license and your mobile VHF transceiver
happens to cover the aircraft band, that's OK.

The VHF aircraft band is 118 to 136 MHz AM mode.

The Military air band is 225 to 400 MHz mostly AM mode.

How can you claim this antenna is omnidirectional? If it has gain it is directional. The fact that it will receive some signals off bore sight does not mean it receives equally well in all directions.

Range depends on many factors including terrain, antenna height, transmitted power, height of transmitting antenna, etc. My discone easily receives aircraft 200+ miles away.

Yup. Know about that site. I want the data itself though, so rather than be
a sleaze and steal it from Georges site, I want to get it directly from the
source.

I also want airport data. Airnav has it, but again, I don't want to leech
someone elses hard work. The data is available and fairly inexpensively. I
just wanted to hear from anyone who bought it, if they liked what they got,
etc.

Guess I'll just have to get one and see for myself. Unless someone wants to
share ;-)

Other than a waste of time and keystrokes, citing the distortions is too
easy. First I looked at the website (democraticunderground)--who the hell
is that for authority? If you tell me "someone" Ive never heard of
reportedly said that there is a Disneyland on the moon and it is true
because there is a website that says so....What crap.
Everything in that post you are referring to is hearsay, or someone "said
it" or its just you regurgitating something someone else fed you. There are
no real credible sources in any of it.
Bottom line is: you guys lost, Gore lost, the left and demos are still
losing power, and you get more desperate in your attempts to politicize
things for your own agenda. It just insures you will continue to lose, but
its fun to watch. And it shows me where all your supposed righteous values
really are.

I unwund my stranded wire, clipped it and it fit well.

314. Re: repeater - splt

Newsgroup: rec.radio.scanner
Date: 2003-05-06 17:08:31 UTC
From: Tom Sedlack <cts050@email.mot.com>
Message-ID: <b98q6f$71n$1@localhost.localdomain>
Source record: 31542
Cross-posted to: rec.radio.scanner,alt.radio.scanner

The purpose of a repeater is to re-transmit a received signal at a higher power for the other stations to hear. Usually, repeater listings give the output (high power) frequency and the +/- offset of the input. For example; 146.79 MHz -600 would mean the repeater re-transmits at 146.79 MHZ any signal it receives at 146.19 MHZ (146.79 - .600).

To hear both sides of the conversation, listen to the output of the repeater. To prove this, bounce between the input and output freqs during a conversation and see what you can hear. The output side 100% of the time. The input side depends entirely on how close the transmitting radio is to you.

Hope this helps,

Tom

Non directional in azimuth, but the pattern is squished in the vertical
plane to provide gain on the horizon.

The picture of the "Scantenna" shows it to be a vertically polarized
log-periodic array. That's definitely not omnidirectional.

> My experience is different...

Same here. I use the random wire that I have set up for my SW. It is about 60' long, with a North (@ 25' H) to South (@8' H) alignment, located in my backyard. I have about 80' of 20 gauge speaker (which should act as an antenna itself), strung around the side of the house to the front porch. I connect this lead wire with a simple alligator clip to the telescpoing antenna of my RS Pro-89. Reception is remarkable. This is my spring/summer/fall shack, complete with tiki torches.

> Is this BS thread ever going to end.

Not if you post replies to it, no. See, the fact that you reply to a post makes it continue. If you really wanted it to go away, you would not have done what you just did. Usually, only trolls do what you do in the hopes that a thread that was about to die, will hold on and live just a bit longer. Since you are not a troll, you will now understand this and not make that mistake again.

To reply again would show otherwise, and make you appear to others here as a troll.

In Canada, no and no. The second "no" is unless you're using it to perform some kind of illegal activity. The first "no" is
that you don't need a licence (but Industry Canada for some strange reason requires one upon the purchase of a
digital scanner like the BC 780).

If you use one in the car, get yourself a "car kit" from Radio Smack. That's a cassette cartridge (cartidge and audio element plus trailing audio wire and jack) but no tape or drive elements inside) that you can slip into the cassette player in your car, and lead out to the external phone jack on the portable scanner (or if you decided to go for one, a base station model that can be fitted to the car). The result is a big difference in sound as the audio feeds directly into your vehicle's stereo system. Rather than having to reley on the sound from the puny speakers built into the scanner.

If your driving around, and want to listen, let the scanner do the work and keep your fingers on the steering wheel.

As for the aiport I go to ours (YVR) when I can, and when i did a few years ago before I even thought about getting a scanner there used to be at least two or three plane nuts that had scanners. One had an external speaker box which he put on the hood of his car.

>
> What are the main features that I should be looking for and e.g. frequency
> range, channels, memory etc.

Grab a 500 channel, that will cover most frequency ranges (forget about cell phones - they are blocked on North American
scanners, and despite what some wags wish for and keep saying the blocking can be overridden, cell phone conversations are not particularly interesting unless you want to hear a girl squeal in joy when she hears her dumb boyfriend talking about going on a date on Saturday night). A trunked scanner is also good (although I have yet to set mine for it). The neat thing about the Uniden and a few others is that you can program them using the computer. Saves alot of finger work on the buttons, and you can save different layouts.

Also grab a good rubber duckie antenna or a magnetic mount antenna that will receive in the aviation range. The ones that
come with the scanner aren't bad, but I got much more better reception off another rubber duckie antenna I bought over
the orginal the portable came with.

Unless the Toronto area is using APCO-25 for radio transmissions alot, I'd would not spend the extra money to get a digital
scanner. Save your loonies and grab an analogue scanner such as a Uniden BC780XLT or BC234XLT instead. You need
to buy the digital scanner and then buy the card for it. (more loonies). I checked out E-Comm (our public emergency services
facility) and they aren't using APCO-25, but rather a different system Pro-Voice.

Keep a frequency list handy in the car so you can follow along if you decide on a portable or another scanner that doesn't allow alphanumeric displays to be set.

Keep in mind there are about 10 or so frequencies at the airport. There's about that many at the airport I go to when I
can (YVR - Vancouver International). PIA should have a place where plane nuts tend to park (usually on the side of the road that goes past the end of the approach runway. You'll find frequencies for high altitude passage, low altitude passage, ground control, departures and arrivals, plus each of the airlines based at PIA (as they do out here at YVR) have their own for company transportation management. There's probably more at PIA as it is much bigger than YVR.

The portables are great except for they don't have alphanumeric displays on them. The base stations are also good. Some have alphanumeric displays, others don't.

I have both (a Uniden BC780XLT base and BC245XLT portable) but tend to use the portable as it is easier to carry and folds down easily to stick in the glove compartment when I want to lock up to go into a store.

Radioworld is in T.O (http://www.radioworld.ca/) so there's a good place to start. Didn't buy from there, I got mine
from a place in Seattle Washington (much closer than T'rana) and he was very good.

You could bomb over to Niagara NY to get one, but with the loonie the way it is, you may end up saving money by buying
in the Excited States than at home. I saved about $100 over the Canadian price and that was including GST paid at the
border. You won't pay "duty" but you will need to pay out GST for it, and probbaly Ontario sales tax. If you do buy in
the Excited States, just say to the CCRA Customs guy that you're an aviation hobbyist and they won't get suspicious
and think you're wanting to know where the OPP is all the time.

> Are there websites that can help me with glossary and a beginners tutorial
> to show me important features and how to use them?

There's quite a few of them for Canadian radio frequencies. There has to be a few for those back there in Ontario
but being here "out west" (near YVR), I don't where the Ontario ones are specificially.

There's Trunkedradio. net which is trunked radio specific, but there's all kinds of stuff in there. Including a chat area.
You'll need to register to get the goodies and the cryptic passwords they give you (save the email when it comes) is
a pain in the behind, but there's a discussion board in there for Canadians, all kinds of neat junk.

http://www.trunkedradio.net/

here's another to get you started:

http://home.achilles.net/~dhoisak/freq/

I've been at it since mid January, and it's great. Gives a different prespective of what a person sees at the airport, and
with the fire department, etc.

From experience it is omnidirectional.

I don't think you could call the ScanTenna a log-periodic array can you? I have a ture log-periodic antenna (the Create) and I can't draw the conclusion the ScanTenna is anything like the Create.

I will bet if you buy one and compair it do you Discone you'll agree that it does a better job. I use to be one who thought discones were great antennas and owned several. However once I tried the ScanTenna I was hooked. I'll never buy another discone.

Look at your antenna text books. Even a 1/4 wave dipole has 3db gain over an
isotropic "theoretical antenna". It' s just a "real world" adjustment to a math
computation.

Your absolutely right. If your intending to put that kind of information out commercially
or on a web site of your own. Or publish, for profit, this information, then that would be stealing,
and in violation of the owners/originators copy write! The sites up on the web like this are intended for personal, hobby use and just looking at them or printing out a copy of the frequencies or maps again for one's own personal use may be O.K. and the intention of or havea implied consent of the web site owner, when they allow unrestricted 'down loads'.

It's like buying a newspaper or magazine, going to a web site suites the same purpose and many
sites get advertising to support them, just like print media.

Would some of the esteemed attorneys out there like to elaborate and clarify this matter.

It's at the Strategis.gc.ca Industry Canada web site:

This will show that analogue scanners need not be used by a licensed user
(anyone can use them, but the general rule is not for illegal purposes and
ordinarily you're not supposed to tell others what you hear), but digital
ones would need to be:

http://strategis.ic.gc.ca/SSG/1/sh50761e.html

..and this is the regulatory requirements:

http://strategis.ic.gc.ca/pics/sf/ipc2104.pdf

I would ask my local MP to see if there's any merit in getting it changed,
but the sod spends more time auditioning for the
media cameras and being a publicity hound and adding to his pension than
would think about changing a stupid rule. Besides his party is not one that
I would ever vote for.

As I said, I went for a Uniden BC780XLT base and a Uniden BC245XLT portable
and both are pretty spiffy. They do take a bit of getting used to
particularly if a person hasn't played with them before, but once you get
the hang of it, it becomes relatively easy. Lots of fun challenge in getting
to know your way around one!

Trunking is another level, which is a bit more complicated than keying in
frequencies.

Both are computer programmeable, and a real delight to have. I'd certainly take one or even both to the Abbotsford Air Show this summer if I can get out there. Wish I had one of them before our area went digital.

There may be a scanner enthusiast web site out there in T.O. as there is one out here. The one out here is pretty good.

Glad to do the quickie research!

Cheers from the Rain Forest!

This hasn't been active in a long time. Another one, not so quite active, but more up to date is http://www.iprimus.ca/~ebowlby/mainpage.htm A good gov't one is http://sd.ic.gc.ca/pls/eng_alpha/web_search.geographical_input and one that will coinside with this one will be http://geonames.nrcan.gc.ca/search/search_e.php

As far as newsgroups are concerned, there' s a few other decent ones better than usenet is at http://groups.yahoo.com/group/ScanOnt and a few others that I know about are http://groups.yahoo.com/group/OttawaScan http://groups.yahoo.com/group/ScanRenfrewCounty . I'm sure there's a few more but don't know yet.

Another Ontario scanner message board is http://dustpile.com/forum/forumdisplay.php3?s=249a28fcf20a25323212cc0475b43179&forumid=26

Does anyone have any good frequency lists for Ontario (of there own) that they might like to share with the scanner newsgroup here.

We buy a lot of cable harnesses from Joel at RF Connection in
Maryland.

www.therfc.com, or 301-840-5477.

We do primarily military contracting, and Joel does work to our
standards better and cheaper than we can do it in house.

We simply fax him cable lists with connectors, sexes, cable type and
lengths, and they show up a few days later.

We can't afford $600 hydraulic crimping tools for some of these
connectors we only use a few times a year. He also knows how to put
milspec boots on the connectors which looks good as well as helps with
strain relief.

If you require it for your contract, he'll even sweep the cables for
you, but we have to do that in house so we don't use him for that.

My highest recommendation, and we've used him for years. If you call
him, tell him you want the same work he does for us and he'll know
exactly what you mean.

His costs are barely more than the raw material cost too.

Steve

In ham radio the repeaters do follow a specific plan, as to whether the offset(input) is higher or lower than the transmit frequency, as well as to the spacing of the split, i.e. 600khz for 2 meters, 5Mhz for 70cm etc.

In public service bands, the same is not garanteeed as true, as the offset could be any number of combinations. For example, our couties fire repeater is 153.950 input, 154.370 output. Other repeaters do not follow the same exact spacing, or direction of the offset. I do however believe that the 450-480Mhz range does use the the 5mhz offset and the higher number is the input, the lower is the output which the original poster would want to listen to. As far as other segments of the radio spectrum, they would have to work on figuring out which is the output as Police call, for example does not distinguish that. It merely lists all frequencies licensed for.

This entire discussion has to do with the angle of radiation / reception of an ominidirectional antenna. the antenna has "gain" when the angle of radiation or reception is lowered. Think of the antenna in the transmitting sense, and visualize the radiation pattern around it as being donut shaped , with the antenna being at the center of the donut, in the case of a simple 1/4 wave vertical. A 1/2 wave vertical, by comparison, will have a "flatter" donut of radiation. This would mean that this antenna will put more of its radiation pattern where it counts , which is out toward the horizon, instead of upwards into the sky. The recieving properties of such antennas are usually the same when they are compared, with the larger 1/2 wave vertical recieving more of the radio signal from the horizon.

They can work pretty well, if you aren't in too crowded of a signal area. Another thing.....it you use and amplifier that has a high IP3, you will have fewer problems with gain compression, if you are in a crowded area.

Yes, I have also used rs adaptors and they suck in my book. They may be OK
at audio frequencies but anything above that then you are asking for a loss
of signal!!
I also agree on the soldering tips!!!
If you want Radio Shack quality then buy from them but if you want good
quality then buy from someone else.

Ralph

> Nor did we imagine mobile chemical and biological weapons labs.

You just imagined that they were being used in a way threatening to the US. EVERY nation has mobile chemical and biological labs - it is a lot easier to take the mobile lab to the herd of cattle, than to take the herd of cattle to the lab in downtown Rapid City. So the fact that Iraq bought such mobile labs - merely proves it is a nation.

Not that it is making vile stuff with them.

There was another report about drums allegedly containing mustard gas and sarin, protected by rockets nearby, with a mobile chemical lab in a truck. Well, turns out - not mustard gas and sarin, but rocket fuel in the drums. For the permitted rockets. And the truck - used to mix the rocket fuel. Your imagination ran wild on this one - right?

Or what about the report today of a truck with a chemical mixer bolted to the floor? You think it might turn out to be a false alarm - like the fifty prior "AHA!" stories I can debunk for you. Like your barrel of mustard gas and sarin, "protected" by nearby missiles, with the tell-tale mobile chemistry lab attached? You really thought that was proof of WMD - right? You have an overactive imagination. As all the prior false reports prove - you jump on every damned one - right? ANd each and every one proven to be bullshit - right? So far - right. All bullshit. Despite your fevered imagination to the contrary.

>
> Nor long range missiles.

They don't have any long range missiles. You just imagined that word "long range." From a different fact - missiles which without the intended guidance package attached went, in testing, something like fifteen miles further than the permitted 93 miles. That's not a "long range missile." It's a rocket which in one configuration, rather than another, might be able to go SLIGHTLY further than the short range permitted.

Your imagination - went a bit wild in this claim - right? Right.
>
> Nor extensive tunnel systems.

Let me guess - there is a tunnel - therefore you IMAGINE that Saddam can visit Satan himself via the tunnels - is that what you are imagining a tunnel signifies?

Well, I'm not so sure. I guess you can IMAGINE that the presence of tunnels proves Saddam talks with Satan - but I am not sure that others would imagine such a sinister use of tunnels as you imagine.

By the way - do you think that Vice President Cheney - when he goes to his undisclosed location - goes through a tunnel?

Just curious.
>
> The administration did.

Yes. All bullishit.

There is a big reward for anyone taking us to a WMD in Iraq.

Why doesn't some Iraqi take us up on our offer?

Someone had to hold the lantern for Saddam to walk down the tunnel to talk to Satan - why doesn't he come forward and take one our soldiers to where Satan lives in your imaginary tunnel world?

Well, not too easy. Or you would have been able to show a distortion -
rather than say - well, the outfit paying for the website where the
photo was is a bunch of Democrats, or, well I can't say its a distortion
- but it sounds like hearsay to me. That doesn't show it is distorted -
it just says - I don't believe your source.

If it's so easy to cite a distortion - list a comment which is a
distortion, say what the truth is, say how the comment distorts the
truth.

you claim that's easy. So do it.

First I looked at the website (democraticunderground)--who the hell

Hi All,
I recently bought one of these and the AI/WR button was disabled. (The police here use the VHF FM band and they don't want you to listen in). Anyway, I figured they couldn't have done much to the unit to disable it so I took it apart and found they'd just put a little sticker over the connectors under the silicon keypad. Put it back together and hey, presto, she works!
Now, while I was looking around inside, I got a little suspicious about exactly what this unit can do. Firstly, on the dust cover for the phone socket, the text says MIC......PHONE and the rubber has been cut off on the mic section because there is no hole to fill.
Furthermore, there appears to be place to solder a mic socket to the PCB if you remove the sticker that says PHONE on the top panel.
Next, the MON button, which is much like a PTT seems to be soldered in too many places, almost as if it's jumpered.
Now, my question is, can this unit be modified from a receiver into a transceiver?
The way I figure this is that it may be cheaper for the manufacturers to build one unit and then disable it slightly to sell as a scanner, instead of building two different units.
Either way, does anybody know any of this for sure? If so, I'd love to hear about any mods done to this scanner.
Thanks!
-c.

My god George that case looks like it weighs a ton :-) I used a plastic case I found at my local RV shop, i.e. it has a place for a CB, a FM/AM/Cassette and a CD player. All are the same size as the BC 780XLT :-) It is also wired with a litter plug and a 120VAC to 12VDC 4Amp power supply. It's called the "RV Electronics Caddy" and the cost was $59.99 It also has spots out on each end for a 5 1/4" speakers and a 3/way speaker switch.

That Other George

Interesting article. The success of using a preamp depends a lot on the scanner being used and the RF environment it's being used in.

My old PRO-2004 benefitted from a low noise preamp because it was a bit gain starved to begin with, and because its front end contained a series of ten preselector filters that were switched "on the fly" as the unit scanned.

Many scanners (particularly handhelds) just cannot tolerate the signal levels provided by a decent antenna (with or without a preamp). Anyone experiencing ANY intermod at all without a preamp, should probably avoid adding one.

Maycom are renowned for using the same case for Receivers and Transceivers, this is probably the case. Unlikely to make it into a transceiver though without adding a lot of extra components (missing off the circuit board).

Only mod I can find is holding down FUNC+WR+ST when you power it on. Can't remember what that does though - probably increases the frequency range - try it and let us know what it does.

sorry for cutting and pasting the wrong URL. The correct URL is:
http://users.cis.net/kingpop/Scantenna.htm

I have the Scan-log (called the ScannerBeam) and that is a very
directional antenna. The ScanTenna is what I was refering to as being
omni-directional....sorry for the wrong url, no wonder there was some
mass confusion....

For safety the pole you mounted it to should be grounded with an 8'
ground rod. However for reception you'll not see a difference by
grounding it or not.

Actually the case with wiring and antenna multicoupler only ways about 1
pound. Add three 780's or 785's then its about 4-5 pounds. But it
should is better than just laying scanners on the passanger seat with
millions of wires running all over the place.....

So far from my experience this is true for the new BC785D. It
experiences a lot of intermod on any outdoor ant I have tried so far
(ScanTenna, ScannerBeam, Create Log Periodic). None of my other
scanners in the shack are experiences overload or intermod problems.
Hopefully today my filers I ordered from Stridesberg Eng. will arrive
and I can do some more playing.

Very true....I found another unit by Maycom that is a transceiver and
appears to be in an identical casing, so you, it appears you're
correct...unfortunately. I was hoping to be onto something good here!
Check out their mini 2M band xceiver here:

Ok, you mental midget, try this: There is a billboard for Disneyland on the planet Pluto. Someone told me so and I can put up a website that says so. Now, prove to me that there ISNT a billboard there.
In other words, you have no credible sources for any of the claims in that propoganda. And you sure arent worth the time it would take to write a dissertation, with footnotes on the truth. It would not benefit any other reader that has an IQ higher than a tomato, because they already know better, and you wouldnt admit to the truth anyway. As I said, with you its not about the truth or the Iraqis or humanity or terrorism or compassion etc; it is about a political agenda and the orgs that are giving you your daily marching orders, like that website you cited.

RF Industries would be a good choice for quality RF connectors.
They make whatever product you could possibly need, to fit the coax
required. Nice silver plated, Teflon dielectric. Of course, you
pay for what you get.

>

Icom's quality is miles, hell a universe better than Uniden/Bearcat. The R5 is going to be much less easy to use though, and it has most of the Icom scanning wierdness as they always do. I think $179 was the best I have seen it, but anything under 200 isn't bad. My R2, performance wise is better than either of the BC200XLTs I had, with the exception of audio, and the R2 isn't bad for it's size.

Get a cable to program it with your PC, it will help prevent some of the hairpulling you would do at first, until you figure out how to program it. Read the manual, and keep reading it and playing with it until it suddenly makes sense. Don't sell it off, you will get it sooner or later. IMO, it's the best of the tiny scanners.

BDK

377. Suspicious cargo ship off Central FL coast.

Newsgroup: rec.radio.scanner
Date: 2003-05-08 00:45:29 UTC

US Customs aircraft came upon a 700+ foot fully loaded cargo ship named C-LAND-PATRIOT. It seemed suspicious to them because it was setting about 50 miles offshore dead in the water. That was at about 1955. Now the ship is slowly moving south. Still raising suspicion because its not changing course to any of the ports. The ship was located at 28-53N 80.08W.

Currently there are three aircraft (callsigns 41SK, 31SK, and 91SK) involved in the intercept. They are relaying info regarding this to HAMMER and JACKPOT on 282.4250.

Freqs being used are: 282.4250 (US Customs); 120.3250 (US Customs); 339.7000 (SEALORD Descrete however 41SK, 31SK are Air-Air).

Are you sure it isn't the SEALAND PATRIOT? Sealand is a (quasi) US
flag carrier. Used to be owned by CSX, but was sold to Maersk a couple
years ago, IIRC.

I thought that as well as I've seen cargo containers with SEALAND on.
However the pilot actually spelled the name of the ship. And according
to him it was spelled with the hyphens and printed on teh ship as:
C-LAND-PATRIOT

Anyone using the Scan150A-60 antenna being sold by
http://www.durhamradio.ca/scanacc.htm

It appears to be a 7db gain wideband antenna with broadband amplifier
And 60 feet of low loss coax.

Has anyone any comments about this antenna pro or con?

>Now, prove to me that there ISNT a billboard there.

Good point. Prove to me there are not weapons of mass destruction. You have
said they exist. Prove to me they do not.

Reminds me of the old what's the moon made of argument. No one could really
know until we got there and actually saw it's not green cheese but dust. The
only prooof that WMD exist is to find them. It was never Iraq's task to prove
they do not exist -- an impossibility -- but Bush's to prove that they do. So
far, a war without cause. Why do I feel like a German in 1939?

> like that website you cited.

What's the problem with the web site? The photo is pretty damning. Some more
or less respectable newspapers actually mentioied it on page 32 or
thereabouts.

At that link there was a photo of the back of the ship. You could see
that it was from Wilmington, DE. The one pilot commented that it
looked as if it said Wilmington, DE on the stern.

So I guess Dan was write, it is SEALAND and not C-LAND. However what
still puzzles me is why did the customs aircraft spell it phonetically.

As an update, they kept watch of this ship for some time, don't know why
they just didn't contact him on marine CH 16, if they would have tired I
would have heard the aircraft's call, since the ship was about 70 miles
from me I wouldn't have heard the ship. Don't know what the end result
was....

From what I heard the USCG was never part of this mission. I heard three different aircraft, all part of US Customs. Never heard any USCG assets called in on this one at least on UHF or VHF. Sorry but I didn't have 8983 KHz (or 5 Meg) HF turned on so I might have missed something there....Ok, I'm tired and going to bed....

> Anyone know if there is a way to get around the vile set time scan delay,
> for me this ruins an otherwise good little unit.
>
You can change your scan time delay from anywhere between 1 and 30 seconds
by holding down FUNC and turning the power on. The problem is that the
delay starts at the begining of the signal, not the end, so if your delay is
10sec and the transmission is 11 sec long, you loose the last second. If
the xmission is 15 seconds long, the 108 starts scanning again 10 seconds
into the xmission and will then stop again when it gets back to the
xmission.

In the UK Radio Shack / Tandy / Realistic sold a very similar casing to the 108 as a SRBR (Short Range Business Radio) transceiver, operating oin the 461MHz range, someone else also used it for a PMR 446 radio, but can't remember who.

So the case is the same, yes. Not sure if the internals were the same thou. Shame I gave my SRBR away last year, I could get it back and have a look.

You can't go wrong with the R5, on either the quality or performance fronts.
The only drawback is that Icom receivers are harder to operate than Unidens
(at least until you get used to them).

In comparison to the R2: The R2 is famous for its great reception. Does the R5 match it? Or better yet, does the R5 beat it?

One turnoff about Icom is that their search speeds come nowhere close to Uniden. I hear that Uniden has a patent on the technology they use to accomplish such fast speeds. And understandably, no other manufacturers want to pay royalties to Uniden to incorporate the tech into their own models.

Strongsignals.net posts performance tests on scanner models. But, I don't think they've gotten around to doing the R5 yet (or at least I haven't found the post yet.) If they have, could someone post the URL?

> said they exist. Prove to me they do not.

Exactly. It is up to the person who comes up with an idea or theory that needs to PROVE the idea or theory, NOT for someone else to disprove something someone claims is reality.

I can say you have weapons of mass destruction hidden in your house, or buried deep below your house and if anyone says otherwise, I can say what do these other people have to prove that there are no weapons of mass destruction hidden somewhere below your house? Should we have your family killed and rip you out of your house so that we can demolish your home and dig below it to try and find these weapons, or would I need to have some proof of these weapons before any of this could take place? In my case, I would need some pretty strong proof, but if it is the US government who makes up the fables, they just go ahead and do what they want since there is not any military force strong enough to do anything about it. Not YET. But Europe and Russia are working on this now as we speak to change that.

Someone makes up a theory about God, then they must prove that theory as well. It is not up to anyone else to prove that God does not exist. By default he does not exist until someone can prove otherwise. Same with these WMD. Until anyone can show us these weapons, the default is that there are none in Iraq.

Innocent until proven guilty never seems to work with the United States, it is always the other way around, even when you enter a courtroom. You are guilty unless you can afford a good attorney that can convince a judge otherwise, or pay him to rule in your favor.

Here is another thing no one has found. All those imaginary doubles of Saddam who the US government lied to you about. If there were 20 or so doubles as they say there were, surely at least ONE of them would have turned up by now. Not that anyone ever believed that bullshit story to begin with. Imagine seeing Bush on television and then having special CIA and FBI equipment to see if that was really Bush or a body double! That would be ridiculous. It would be obvious to anyone who has seen Bush as much as the world has on television to know if it is really him or not without ANY special equipment. The same is true with Saddam. Not only did they expect us to believe that there was not only ONE, but SEVERAL people that looked exactly like him AND... (get this) SOUNDED exactly like him too with the distinct unusual voice that he has.

There were no weapons of mass destruction in Iraq (but Israel has NUCLEAR weapons of mass destruction) There were no Saddam body doubles, there is no disneyland billboard on planet Pluto, and there is no God.

Unless anyone can prove otherwise.

People have tried proving the God theory for THOUSANDS of years, and even with today's technology have failed to do so, so it is hard fact by now that there are no Gods of any kinds.

>
> Has anyone any comments about this antenna pro or con?

I'm skeptical. Hard to tell from the picture, but it appears to be a collinear antenna. It's possible for it to have gain on a couple of frequencies, but not across the entire 30 t0 1200 MHz range.

Be wary of words like "up to 7 dBi" gain.

Try this site <http://www.cityfreq.com:81/>
Another great site is <http://www.strongsignals.net/index.cgi>

Go to "Favorite Pages" and click on message boards then
go to the "frequency " board. Down the bottom, below the
message pain are lots of frequency resources,
like this one <http://tmaf.cjb.net/>
You may want to go to the last message board the "TRUNKING"
board and check out trunking radios. Again at the bottom of that
board you will find a wealth of information on trunking and reviews
of the trunking radio scanners!

And another place to look
<http://www.topsitelists.com/bestsites/k4lyp/topsites.html>
If money is a problem you may be able to sell or trade in your PRO-43 and
purchase a used or
new trunk tracker scanner radio for little or now out of pocket expense
Check out <http://www.grove-ent.com/>
<http://www.grove-ent.com/hmpgbbb.html>

And one last thing ,put your scanner into SEARCH mode and see if you can
find-any
active frequencies and or unknown frequencies! If you need a manual for this
radio
they are available at radioshack.com
<http://www.radioshack.com/ProdSupport/DocumentDetail/DocumentDetailIndex.asp?P=support_el
ectronics&D=2849&T=htm>

I wish all of you out in the regain the best, just stay the course!
Jim

Thanks for the info and reply. I found a 2002 Police Call Cd, but it's not netting a whole lot of results. Some city workers and storm trackers. I suppose most emergency frequencies are trunked nowdays. I got out of actively scanning several years ago and I haven't kept up with what's happening. Then you have something like this happen and you wish that you had at least taken the time to program your scanner with a printed reference list in case of an emergency (mine is programed for my previous location still). Again, thanks for the info.....

Yeah, I'll check out what I can find. The tornado really tore up the GM plant here and Tinker AFB is right behind that so there might be some

interesting activity on some of those military bands that the Pro 43 receives. Any suggestions on where to look? Seems like I remember the Pro 43 has access to some frequencies that most scanners don't get - maybe those are just military aircraft frequencies.

Never specifically tested mine, but probably not as well as a telescopic whip would work. This is supported by test data on Rich Wells' Strong Signals website at http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=rev&class=ant&num=003

The RH-77CA is an excellent antenna for VHF/UHF, however. I used to use one on a BNC mag mount as a mobile antenna, and it worked very well!

You'll have to talk to your congressman...cell blocking is dictated by law in the US regardless of how appropriate the law might be. There is still some analog activity in my area, but, yes, it is primarily digital. Other areas, as it seems, still use analog more heavily. Fact is, even if cell goes all digital, having an unblocked scanner would offer no advantage over a blocked one; that is, you won't be able to decode anything anyway.

most cell phones nationwide use 2GHz. In fact most only use 800 MHz
for roaming out of the digital coverage areas, and you must pay a per
minute charge. It is not worth the time or effort to try and pick
with scanner. I have four unblocked scanners and use the for military
air only. You have to be way back in the sticks to have much 800 MHz
analog. I live 20 miles from town and all I can see are 2 GHz towers.

I can attest to that. In December I switched from Cingular to T-Mobile. About a
month later, I changed jobs. Now I lose my cell coverage about 1/2 way to work
and while I'm working, I have to drive around to certian places where I can get
a signal out, and I drive right under a cell tower just before I get to work.
The phone doesn't switch to any other system. I don't roam, ever, as far as I
can tell. If I'm not in range of a T-Mobile site, I don't get cell coverage.
I've been told Verizon has excellent coverage where I work, so once my contract
is up, if TMobile hasn't improved, I'll be switching to Verizon.

Actually, my phone can find other systems, but it can't log onto them. There's an option to look for other carriers, and it'll even give me a list, but if I try to switch, it gives me an error.

I will definately go with Verizon, but I have to wait until December when my 1 year is up.

In the last few years, blocked scanners have not just had the cell
ranges omitted, they have filtering to suppress cellular "images".
This filtering significantly reduces rx sensitivity in the 851-869 MHz
range.

Having an unblocked scanner with a rx sensitivity of .3uV sinad at
868.1125 MHz is a definite advantage over a blocked scanner which
receives that frequency with .75 uV.

Out here in the west, If I routinely traveled through the desert or sparsely populated rural areas, I would have to go with Verizon or AT&T WS. However, in areas with a significant population, a customer will not see a noticeable difference between 800 MHz and 1900 MHz carriers. I work in the industry, and I've seen the drive test results.

>Companies such as AT&T
>and Verizon have also built 1900Mz in some areas of the country where
>they don't have the 800Mz license,

If you look at an AT&T WS cell site, you will see four antennas per sector, with one of the antennas being noticeably different than the others. That antenna is for their 1900 MHz GSM system. The reason they needed to build out on 1900 MHz was because they screwed up and went with TDMA in 800 MHz. Now they want to go with GSM and dump the TDMA, but the TDMA subscribers are slow to migrate, keeping the TDMA on the air, and preventing them from freeing up enough spectrum in 800 MHz.

432. Discriminator tap, Why?

It's a nice little radio. I like it so much that it is the one I walk
and drive around with now. I've found two in the last five weeks and
bought both. Both were missing parts. The first cost me $39.99, and
the second one cost me $34.99. The regular price at Best Buy was only
$149.99.

They seem to be as easy to find now as DX-somethings at Radio Shack.

I suggest you go to verizon.com and check for phones and service. I checked several parts of the country and got basically the same info: by clicking on phone it says first pick your digital phone and if you continue thru their site you get to this statement and here is from their web site "Dual-mode phones work on analog and 800 MHz digital networks.
Dual-band phones work on both 800 MHz digital and 1900 MHz digital networks.
Tri-mode phones work on all three frequencies: 1900 MHz digital, 800 MHz digital or reverting to 800 MHz analog cellular when digital is not available.
I just added two more phones to my Verizon account and both are Trimode.

someone also commented on Nextel, well they use a unique digital mode called IDEN and no scanner will work on it.

Ok, I'll check that too but Police Call has done a better job than I first gave it credit for..... More major tornadoes tonight as I write this and I'm all in the middle of it (radio transmission wise). The main EOC (?) channel for OKC/Norman area is 145.4100..... I've never been in the OKC area during an actual tornado..... lots of storm chasers and the TV stations are getting their info from these guys. I get it before the stations air it a fair amount of the time.

take the output from your discriminator tap, and plug it into your sound
card. Get a pocsag decoder.
Tune your radio to a paging tower fequency, then you can see the text for
all the pages on your screen.

Hi,

I want to download frequencies for Public Safety and also bussiness from the FCC site (http://wireless.fcc.gov/cgi-bin/wtb-datadump.pl), but I don't know which database to use. There are different databases available for download: Land Mobile Private, Land Mobile Commercial, GMRS, ect. Where can I find the Public Safety and bussiness frequencies. But maybe I should ask this first: Is it possible to download freq information from the FCC that can later be sorted by State, or City, or whatever?

BTW, I have tried searching the FCC's database online, but you have to go a couple screens into each record to get to the frequencies.

Thanks,
moischmoe

Well, although it can't really be called lightweight I prefer to attach a
SMA to BNC adapter to the radio so that I can use an ordinary telescopic
aerial which has a BNC connector - I've tried a few SMA aerials but I always
come back to using a telescopic, they seem to be the best all-rounders.

The discriminator tap with a 4 level slicer works great decoding Flex.

I am going to start pre-installation of my antenna which is sitting on a siding someplace in America just to see how long it "can" take to get here. (thanks UPS)

I am going to mount the ScanTenna about 8 ft. about the side of my house. I live in a very windy area (50 mph wind common) and am afraid to try to put it any higher, I may drop this after I look at it..
Also when we have lighting it tears the town up, blows the top off lots of telephone poles and just raises hell.

I am going to ground both the mass and lead-in. The mass is going to have a drip-per on it so it will get watered everyday and I'll put a ground rod through a rosebush that is also dripped everyday.

I am looking forward to having this new antenna and I am ready to snoop on the world. I am going to include some of the names of the "desert" militery sites in my "sifi" writings and build on a contact made from a Dxing/Scanning site. I FEEL A STORY COMING ON.

Anyway, last night was a great night for owning a scanner! I'll certainly
not make the mistake again of not having mine programmed in an organized
manner in the future. Indispensable tool for information during one of our
famous tornados. The TV stations have all the fancy radar systems, but they
can't tell you exactly where the tornados are. The spotters have to report
it in and the spotters use 144-148. There are still allot of public safety
transmissions that aren't trunked or digital around here as well. My old
Pro43 is still pretty handy!

Just a standard earphone should suffice. You can get those at Radio
Shack. I however prefer a monaural headset or a Walkman-style headset
with a monaural adapter attached to it for my personal scanner listening.

I don't know which antenna is better for wind resistance, but I've
got a Shack Discone up 30 ft that's survived at least 70 mph winds and a
close brush with a tornado that knocked down all kinds of trees around here.

wleamons wrote:
> TRY cityfreq.com

When does (if at all) cityfreq update their listings? I've only used it a couple times and find it to be outdated and inaccurate. Hack they have FIVE different listings for Daytona Beach, FL. 4 of the file are miss-spelled.

I've found it much easier to use the FCC site. I've never downloaded the databases but have instead used their online searches. You can start here: http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts

From there I like to use the Latitude/Longitude/Freq option. Simply fill in the Lat/Long of where you want frqs for then besure to put in a radius. I like using 15 to 25 miles. You can then tell the search what freq range to return, I like using everything from 30.0000 to 1000.0000, but dont forget to put the "M" in front of your freq to tell the database you entered Megahertz and not Gig or Kilohertz. It then will give you a page where you can pick which database is avilable for the area you entered. Click on the "ULS DATABASE" link. Then you'll get a nice listing of current freqs for your area.

Sorry but after seeing so many people refering others to cityfreq I just have to say that the FCC's own online database is much better.

PS: Cityfreq simply used the FCC's online database to build their site however it appears they had some errors when doing so. Plus it doesn't appear to have been updated in quite sometime. Example for Daytona Beach, FL they have "Dayona Beach, Dayton Beach, Daytona (there is no Daytona, FL!), Daytona Bch, and Daytona Beach. They had to list it 5 times just to get it write once. Also, Altamonte Springs, FL is in there 4 times, 3 of which are WRONG!....

I know I'll catch flack for noting jumping on the Cityfreq bandwagon but I think the FCC's own database is easy to use and more accurate...

I don't know of any way to down load directly into a software program
that supports
a scanner receiver, from the FCC databases. Some after market software
applications boast of a
ability to cut and past frequencies form microsoft word and/or excel.,
into the radio application,
then up load into the radio's memory!

If you look up frequencies town by town or city at city freq.:
<http://www.cityfreq.com:81/> and possibly cut them out and paste the
whole list into a word doc and
from there import into a radio scanner application, that supports this
sort of thing.
They come out of the 'paste' mismatched onto the "word" page and take a
lot of manipulation to line the frequencies up correctly to licensees.. It
may just be a matter of deleting all of the "name " fields, leaving the
raw frequencies to be uploaded.

I've never used this type of application ,but have used others that
support the ICOM IC R-2 , "loader' program feature.

Check out the software pages at
<http://www.strongsignals.net/index.cgi>
click on "Favorite pages" then go to the bottom to "software" and try the
Message Board"
'software'

Do you just want to down load, from the FCC, to make your own
frequency list?
What application do you want to download the FCC database into and what
radio(s) dose
the application support? And yes "drilling down" into the FCC on line data
base is about
the only way to get information. Try the "licencess/county/state" this
will give you a
list of call signs then click to drill down to the frequencies.

Give cityfreq a try its based on towns and citys ,but it's all on one
list!

Source record: 31344

Although you could construct and merge FCC databases using Microsoft Access or another industrial-strength database program, licenses are being added / cancelled / modified daily. It's a futile effort to maintain an accurate database from the F.C.C. licenses for the typical hobbyist.

Cityfreq is one of many resources that one should review occasionally, but anyone who is using just that information is missing out. And, as George mentioned, some of the location entries are misspelled - probably a combination of errors by cityfreq and the F.C.C.

My first choice is the F.C.C. database, but you have to take the time to understand how to use and read the licensee information, and understand some of the quirks of searching the database ... particularly geographic and licensee name searches.

Other sources include:
-- Police Call (I save old volumes for reference to deleted / cancelled / modified licenses)
-- Trunkedradio.net (for trunked system information)
-- searches with your favorite search engine for the desired frequencies
-- the lists on Yahoogroups

I would also subscribe to the FCC_grant_? list on Yahoogroups.com for your state.

Go to yahoogroups, and enter FCC_grant_(your state's 2-letter abbreviation) in the seach box. Each week you'll get a digest of license additions / cancellations / expirations / modifications / renewals for selected license classes in your state. It may be more information that you want, but you'll be aware when your local agencies add a new frequency or repeater.

I have heard that RadioShack is now making a digital scanner but that you can only get it online at www.radioshack.com I have not checked it out yet so I don't know if this information is reliable. Also, slightly north of the city is a store called Trevose Electronics and they are very knowledgeable on scanners, shortwave radios, etc. since they sell them. Good luck!

I am looking to buy a 785d or 780xlt.

If you have a 785d I would appreciate any comments on it good and bad features.
I do not need the digital portion.

Mainly looking for comments on sensitivity, ease of programming, etc.

TIA, mike

Hi,
Last week I had made a post regarding the 785 .vs. 780 as I now have both radios. Below I've pasted the orginal post. However I do have an update. It appears the 785 suffers from bad overloading from FM broadast stations. The nearest FM station to me is about 4 miles away however it brings the sensitivity of the MilAir and Air bands down to the point the MilAir/air bands are poor.

I have purchased a Stridesberg FM Notch filter to put on the antenna feeding the 785. It did improve the overload problem. However it may have only brough the 785's sensitivity up to almost as good as the 780. Sorry but side by side the 780 will win in the sensitivity departments in nearly every band.

So far I'm not impressed with the 785 in any way, programming trunking systems is more time consuming then the 780, the 785's display only shows about 1/2 of the information presented on teh 780. I have 5 780's and 2 785's. I'll probably sell 1 of the 785's and buy another 780. The only reason I'll keep one 785 is for digital as I have one digital system that I want to monitor. 99% of my listening is Air & MilAir which is not digital.

Here's my orginal post:
I just got 2 BC 785's today. Since there isn't much miller activity in the evening I'm doing some comparing in the Civil Air band (108-136MHz).

First test didn't do very well. Example, on the 780's I can receive the ground side of a Tower on 120.300MHz that's located about 30 miles away. This would be Sanford Tower for those in the area. On the 785's I can't hear the tower even with squelch wide open.

This test involved using the same antenna feeding 2 785's and 1 780 via a Stridesberg Active multicoupler so I know its not a difference in antennas. Tried a few other air freqs with similar disappointing results.

Tomorrow I'll try some UHF MilAir freqs and see what happens.

I would like to hear from others that have both a 780 and 785 and hear your thoughts on the AM (108-136 & 225-400 MHz) sensitivity comparisons.

Hello. I am interested in upgrading my BC-60XLT to something more comprehensive here in the USA. I was wondering if there are new scanners sold in the USA with cell blocking such that--using either software or hardware manipulation--the cell blocking could be removed. It is possible to have legal intentions; say, if a person purchased a scanner in the USA then wanted to bring it to Japan. Regardless, if anyone knows of a model and method of manipulation that would be excellent!

> have any suggestions, I'm very open. :)

That was my ironic way of saying that the SC-180 scanners are not easy to find, because all the DX-whatever SW radios have similarly disappeared from Radio Shacks too.

Suggestions? Well, if you happen to be driving down the road and see a Best Buy, pull into the lot and give the store a try. Calling the store won't work; neither will having "the computer" search the inventory for you. I bought my first SC180 at a Best Buy that "did not have any in stock." Similary, I bought my DX-398 at a Radio Shack that was "out of stock."

I shall refrain from making the obligatory retort to the "you have question; we have answers" slogan. Seeing is believing.

Best wishes. Back to whacking spammers.

Source record: 31263
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Tonight I programmed my first trunk system into my BC 785D. Iï¿½ve programmed trunk systems into 780ï¿½s, PRO-92ï¿½s, and a PRO-2052. I must say the BC 785D takes much longer to program a trunk system than any scanner Iï¿½ve yet to use in Trunking mode.

After programming in a truck system into the BC 785D I discovered yet another feature Uniden deleted from this scanner. That is the ï¿½Channel Activity Indicatorsï¿½. The lessor expensive scanners (780, PRO92, PRO2052) have the Channel Activity Indicators. If youï¿½re not familiar with these Indicators they provide a visual display of activity on all the trunk freqs programmed into a bank. Itï¿½s a very nice way to know how much traffic is occurring on a truck system. Itï¿½s a feature I really miss on the 785.

If Iï¿½ve missed something and the 785 really does have this feature please let me know how to turn it on as I really miss those Indicators.

A Disappointed BC 785D Owner,
George

Source record: 31266

For what it's worth, here's what I've noticed...

The plus for the Pro94 was they way you can turn on/off ID banks when you're scanning trunked systems by pressing the number of the ID bank while it's scanning. With my Pro93, I have to go into the Trunk setup and trun the banks on and off that way. The biggest drawback to the Pro94, that made me buy the Pro93 was the lack of text labels for trunked talkgroup ID's. The Pro94 forces you to remember the numerical ID's for the different talk groups, where the Pro93 lets you program in text (both for talkgroup ID's, and for non-trunked frequencies), to simply read that It's the Police-back channel 4A.... or the fire dispatcher, or the airport control tower... The other thing that made me buy the Pro93 was the data cable connector. I use my PC to program my scanner, or occasionally clone to my dad's Pro93 (It's so much easier to help him over the phone if his scanner is setup identical to mine).

The Pro95 is the same as the Pro93, only with more channels (1000 channels instead of 300). Although, I don't even have half of my radio's frequency's used.

Hope this helps!
Matt

489. Java780 - New Software for your Bearcat 780XLT...

Java780 is real-time display, logging, analysis, and reporting software
for the Uniden BC780XLT.

Screen shots and download are here:

http://www.qsl.net/ke9zm/java780/java780.html

Summay of features:

o Real-time display of almost all BC780 LCD info on your PC supersized.
o Logs all frequency events including talkgroups and alpha tagging info.
o Real-time query of events against database for identification.
o Maintains pushdown chronological log of last 25 frequency events.
o Maintains sorted list of the most active frequencies.
o Review with "Click-to-Tune" for all logged frequencies.
o Session reports...
-all frequencies and all talkgroups
-analysis of all frequency events against multiple identification
databases and BC780 programmed memory channels
o Reports easily exported to desktop applications
o Cross platform - written in Java - Tested on Windows and SuSe Linux

If you don't need trunking go with the SC200. Most major races have vendors
that will program all the racing freq's for you at the race. Plus the SC200
has alphatags so you can label your channels and know what you are listening
to without memorizing what freq is what.

I've got a weird problem with my (older)
Realistic Pro-43. All works fine EXCEPT
for the Limit and Direct functions. They
seem to set up properly, but when in either
of those modes if you open the squelch
all the way up it acts like the squelch is
still on (full) -- never gets any signal at all,
limit scans away, but no nothing.
Anyone ever see this before? Yes, I tried the
total reset (clear-0) which wiped out my freq
settings but still no fix. Any info appreciated. JD

It has long been an accepted theorem that if the antenna doesn't
blow down in a storm, then the antenna was not big/high enough.

This goes way back before WW1

Got my new ScanTenna up this afternoon and man is there a differnce. I can pickup everything from Oakland center to LA Center and all the way over east to Dreamland and Nellis.
It's up about 20' and I hope it stays when the wind comes up.

I also got the magnet mount for my pickup and the BC245 and it works a lot better then it did. I am going south in the morning and I am looking for ward to acanning all the way down.

509. New Radio Shack 800 MHz antenna

Newsgroup: rec.radio.scanner
Date: 2003-05-12 23:27:15 UTC
From: DougSlug <dougslug@optonline.net>
Message-ID: <n5Wva.123165$AG6.20257180@news4.srv.hcvlny.cv.net>
Source record: 31289

Radio Shack now offers a 7" ducky antenna that boasts improved performance in the 800-900 MHz range. The RS part number is 20-283 and it goes for $14.99.

It also appears to work reasonably well for general VHF/UHF coverage. I wouldn't expect much below the VHF-Lo range, though.

If you're looking for a compact, nicely styled and flexible replacement for your trunking (or cell phone!) scanner, this might be worth checking out.

Anybody have any experience with this antenna they would like to share?

- Doug

Well that sort of works...

It shows ACT ID: and scrolls thru the active ID's, but it's not the same as the little bars on the top of the 780. I'm with George on this one: I liked those a lot better.

Q: What is your policy on cross-posting? (REVISED 12/3/2001)

A: Cross-posting ability is not to be used by customers for the purpose of
"cascading", "flaming", or "trolling". We may disable the cross-posting
ability of a customer if we believe they are cross-posting with one or more
of these purposes

Like we've said its a great antenna. Wait until you start playing
around more, the more you use it the more you'll like it. I have one at
17' and its GREAT! I have a $300 beam antenna at 30' and I find myself
using the ScanTenna at 17' more often....

I know what you're saying, already have that active. However its not he same as the channel indicators. With the channel indicators you could see what frequencies were busy. At one glace you know if you were missing a conversation on a different talk group that you didn't have programmed in or while listening to a talk group. Also when the "#@$@#$" its the fan during a major fire you could see the actual load on the trunking system, that was what I really like to see. Our local system has 16 freqs. I've seen at times as many as 13 active at one time. The only way you would ever know this is if you were watching the channel indicators....

PA-SitRep (Pennsylvania Situation Report) is developing
a group of PA-SitRep Contacts, most of whom (51 so far)
are Amateur Radio Operators and or scanner enthusiasts.
We are seeking additional volunteers.

PA-SitRep Contacts are asked to monitor emergency
situations from their local areas and post only major
emergency situation reports to the PA-SitRep
Discussion e-mail list which is used, in part, for
monitoring major developing emergency situations.
If warranted, PA-SitRep Administrators will move the
emergency situation reports to our main emergency alert
PA-SitRep list where the alert is distributed to over 600
subscribers throughout the state of Pennsylvania.

The long-term goal of PA-SitRep is to provide rapid
emergency situation reporting service, free of
charge, to any interested served agencies, as well
as our own Emergency Alert list, much in the same
way that SKYWARN provides weather situation
reports for the National Weather Service.

Agreed.. Tired of blocking his Numerous Alias... Going to just start reporting him... Wouldn't be so bad if he didn't purposely circumvent the filters... Wonder if he realizes that that alone is a violation of nearly every news providers TOS? And that's not even counting his off-topic BS...

It appears that this doofus has now morphed into "Stagger Lee." Duh.
I have no great use for net cops either, but given how pathetic he is,
I think he should be put out of his cross-posting misery at the
source.

The good news is that the fine posters of the radio groups have
treated this buffoon with the degree of "respect" he deserves--zero
responses to his posts, which is really unusual even for braindead
trolls like him.

>
>
> BAGHDAD, May 11 -- Late Friday night, two young women arrived at the iron
> gates of the Alwia neighborhood's maternity hospital, where a dust-covered
> white statue of a nursing mother welcomes patients and visitors. The
> teenagers were bruised and bloody, hospital workers recall. They asked to
> see a female doctor.
>
> An OB-GYN named Enas Hamdani examined them. The doctor's disgust and anger
> grew as the pair sobbed out their story. While they were walking last
> Wednesday afternoon to buy bread at the market, three men in an
> orange-and-white taxi kidnapped them at gunpoint. They were driven several
> miles, they said, to a small house on the periphery of the city, in a
> farming area they'd never been before.
>
> The well-appointed hideout included beds, satellite television and a
supply
> of food, the patients told Hamdani.
>
> "They were 18 and 19 years old. They were virgins," Hamdani says in an
> interview in her office today. "You can imagine what happened, of course."
>
> Her examination showed evidence of repeated rape and sodomy, which the
> victims told her was carried out by five men for 36 hours. The women also

> had been beaten with boards on their faces and backs, she says.
>
> The doctor's detailed account could not be independently verified with the
> victims -- they were Muslim, according to staff on duty that night, and
> would not talk to journalists about such things. Rape has a terrible
stigma
> in the Islamic world, leading some victims to seek treatment privately and
> never report the crime. Even in nominally secular Iraq, rape -- and the
> consequent loss of virginity -- can mean that a woman is unable to marry
and
> is expelled from the home. It can even lead to women being killed by male
> relatives because "it is a shame upon the family," Hamdani says.
>
> The attackers dumped the victims on a roadside Friday afternoon, according
> to the doctor, and they were taken back to Baghdad by a sympathetic taxi
> driver. Before leaving the hospital, they asked for a medical certificate
> showing they had been raped, but doctors told them they had no such
> authority. Hamdani and her colleague, Khilood Yunis, an OB-GYN who was
also
> on duty, directed them to an Iraqi police forensic unit where swabs could
be
> taken as evidence.
>
> But the unit, like so many police facilities here, is shuttered. Symbols
of
> Saddam Hussein's hated security apparatus, stations were looted and burned
> to the ground by Iraqis after Baghdad fell to U.S. troops.
>
> As much as she despises the rapists, Hamdani reserves a special contempt
for
> American forces who conquered Baghdad more than a month ago. She and
others
> have heard repeated promises that reconstituted Iraqi police patrols,
> accompanied by military units, will be here soon. But in many
neighborhoods,
> military commanders say their troops are stretched thinly and have no
> training in police work.
>
> "Everybody needs security, everywhere in Iraq. Where is it?" the doctor
> asks, adjusting her head scarf and batting away flies. "We don't even know
> where to ask."
>
> The doctor cocks a finger toward her head, as if it's a gun. "It's like
the
> Texas you see in the movies." She means the Wild West.
>
> Reports of rapes, holdups and murders are multiplying citywide, in both
poor
> and upscale districts. In this city of 5 million, the dearth of police is

a
> fundamental problem, but certainly not the only one: Electrical power,
> gasoline, clean water and medical supplies remain unavailable or out of
> reach for many residents. The looting that broke out after the fall of
> Baghdad was a harbinger of a slow devolution into fear and despair,
> especially after dark, especially for women.
>
> It's better to just sleep at the hospital, says Yunis, the chief of
> residents -- she feels safer and can be there for women who arrive late at
> night to deliver babies. "We are frightened for our lives," she reports
with
> a weary sigh. "You can't imagine what it's like when we hear all this
> shooting near the hospital at night."
>
> Before the war, "I could leave the house at midnight to see my patients.
Not
> now." Like many Baghdadis, she won't let her teenage daughters attend
> school. "My husband has only one job now -- to stay at home and be their
> bodyguard."
>
> An auburn-haired nurse, Samara Hassan, arrives to voice more complaints:
> Ambulances can't be dispatched because patients can't call the hospital.
> Most phones in Baghdad don't work. And anyway, it's nearly impossible to
get
> gasoline for ambulances, even though the country sits on a sea of oil.
Lines
> at the official gas stations wind for blocks because they lack security to
> operate round-the-clock as they did under Saddam.
>
> A little girl dressed in pink emerges sleepily from a nearby storage room.
> She climbs onto Hassan's lap.
>
> The nurse is a single mother. She and her daughter, Maryam, have been
living
> here for a week. "What else can we do?" She throws up her hands.
>
> Where Are the Police?
>
> Venture into several neighborhoods and harrowing eyewitness accounts
emerge
> without prompting. Here's a man named Ali Taha, 36, wearing grimy blue
> overalls, fixing tires in the Alamia district: "Three days ago, a woman
was
> walking near here and men with guns grabbed her by the hair and kidnapped
> her."
>
> "Yes, I saw it," says a man who strolls by and overhears Taha's account.
"I
> know her. She is 26 and it happened at 11 in the morning. They took her

into
> a Passat taxi. Nobody has seen her since then."
>
> Oh, yes, and down the block a man was shot in the stomach waiting at a
> traffic light. The gunmen took his car. Across town in the Zayuna
> neighborhood, a man was shot and killed Friday. He was going with his wife
> to services at an Orthodox Christian church.
>
> Where are the police? The U.S. military?
>
> Nobody knows. Few have seen them.
>
> In the New Baghdad district -- one of the city's most dangerous -- Majad
> Hamad, 30, is selling strollers, children's bicycles and backpacks. He
> surveys the market across the street, in front of a mosque. It's full of
> people shopping for produce and looted goods, including computers, this

to
> devalue by 50 percent. The effect was to make Jordan ever more dependent
on
> its one loyal Arab benefactor-Saddam Hussein.
> At the same time the Chalabi family bank in Switzerland, Mebco
> Geneva, had come under scrutiny from Swiss regulators. In April 1989 they
> revoked its license. "The result of this action in Switzerland was to
cause
> a run on the other financial institutions in the group [Mebco Beirut and
> Petra]," says Chalabi. He claims that by mid-May the situation had been
> "stabilized." But as Swiss investigators, the Jordan Central Bank and the
> Lebanese stepped up their inquiries, more and more dubious loans from one
> Chalabi institution to another surfaced on the books.
> Chalabi initially thought he could ride out the storm. He was more
> than just a banker in Jordan; by this time he was the personal benefactor
of
> many of the country's officials. "I made it a policy of Petra to provide
> loans in small amounts to military officers, NCOs, soldiers, Royal Guards
> and intelligence officers," says Chalabi. "The royal family, apart from
the
> king [Hussein], were always in need of cash, as their income and sporadic
> gifts from the king were always less than what was required to sustain
even
> an upper-middle-class life in Amman. Many of these royals were friends of
> myself and my family for many generations. They came to me for help to pay
> for schooling for their children, for medical bills and other expenses."
>
> A GOOD BANKING RISK?
> Chalabi's relations were especially close with the king's brother,
> Hassan bin Talal, who was then crown prince: "Prince Hassan borrowed money
> from Petra in his own name to cover public expenses that were expected of
> him." In addition to support for the prince's favorite charities, there
was
> money for the tribes, for his guards, for military aides and to cover the
> expenses of diplomatic trips abroad. Chalabi said he "felt that the heir
to
> the throne was a good banking risk." (Shortly before he died in 1999, King
> Hussein changed the succession in favor of his son Abdullah.) The total
> loaned by Petra to Prince Hassan, Chalabi says, "was about $20 million."
> Ironically, after Petra was seized by the Jordanian government, that
amount
> was paid back to it "by King Hussein from Saddam's funds," according to
> Chalabi.
> Saddam's influence in the kingdom had grown enormously by the
early

> 1980s, and on at least one occasion he demanded that a suspected opponent
be
> handed over without any trial or court proceedings. The suspect, Hadi al
> Subaiti, was relinquished and then killed by Saddam's security forces in
> 1981. Since Chalabi himself was increasingly active in efforts to thwart
> economic or other assist-ance to the Iraqi regime by that time, he had
> reason to be worried. Then Petra Bank was seized on Aug. 2, 1989. Chalabi
> says both a senior intelligence official and Prince Hassan warned him to
> leave the country. Chalabi drove across the border to Syria in his own car
> five days later.
> Yet none of these political intrigues fully explains the financial
> legerdemain that Swiss and other investigators were turning up in the
> various Chalabi institutions. After losing its license, the Chalabis'
Swiss
> bank had to file for bankruptcy. Soon, so did a related family "trading
> company" called SOCOFI. About $160 million in claims were filed by angry
> SOCOFI creditors (many from the Middle East). But according to a secret
> Swiss bankruptcy report obtained by news-week, there was a big hole in the
> company's balance sheet: about $100 million worth of outstanding loans to
> members of the Chalabi family and their companies. This included a $2
> million loan to a Swiss software company run by Ahmad. (Chalabi says his
> company couldn't repay the loan because it, in turn, was owed money by the
> failed family bank.) In September 2000, two of Ahmad's brothers pleaded no
> contest to charges that they had broken the Swiss penal code in connection
> with SOCOFI.
> Under increasing pressure, the Chalabi financial companies
collapsed
> one by one. SOCOFI Geneva folded in early 1990. Then Mebco Beirut, which
had
> actively funded the Shiite Amal militia during the 1980s while it was
waging

> Very nice, I like it. How would I go about inputting data for my
> area from the Police Call CD?

Regarding Java780's auto database query feature...

You can import any tab delimited file. So, if you have Police Call,
Spectrum, or any of the other frequency databases, just export a
search to get the data out into a tab delimited file.

You can use almost any spreadsheet program (including OpenOffice.org -
free) to cut the columns you don't want and then save the file.

Java780 has been tested with files as large as 20,000 records. So, if
you want to export all frequencies for a city, county, or whatever
from Police Call and have Java780 lookup these frequencuies as they
are received, or produce reports of received frequencies against this
database - that will work as long you hava a fast enough PC and enough
memory. If you don't have a fast CPU for real time, you can still
produce a report of received freqs against your reference database.

Just look at the samples that come with the product - make your Police
Call export look like those and it will work.

537. Which Scanner will Do ALL This??

Newsgroup: rec.radio.scanner
Date: 2003-05-13 19:05:09 UTC
From: BD <nalapombu@hotmail.com>
Message-ID: <3ec14299$1_2@corp.newsgroups.com>

Hey,

I have been a scanner, short-wave and AM listener for a while now. I am no expert, just a novice. I am about at the point where I would like to get better equipment to use. My thinking is along the lines of trying to get a unit that will allow me to monitor everything I want in one piece of equipment.
I started out by nosing around with the better scanners and found that some of them will indeed receive AM,FM, and Short-wave along with regular scanning capabilities. I found that the AOR, Alinco and ICOM all have units that will do it, prolly some better than others.
What I would like is opinions from you all. What unit should I be looking at that will allow me to listen to scanning, AM, FM and short-wave? I would prefer a handheld, if not at least portable.
If I buy different units for each of them, it will be more expensive. I know that I will lose some quality by trying to get all of it in a small package but will I lose enough that it would be better off just getting a separate unit for all? Would the AOR 8200 Mark3 be a better choice than say a cheap Radio Shack scanner and a separate Sangean 909?
Let me know what you think.

Thanks
Nala

I just bought the Icom R5. I should get it this week. I can let you know what I think of it. I chose this one because of it's size and the fact that it covers it all and the cellphone range is not blocked.(the Canadian model anyway). I bought it at Radioworld in Toronto. I bought the Drake R8B there last fall and I was very pleased with them. Anyway it's on sale this week for 369.00 Canadian funds.

Hi Nala,

I have a number of scanners and SW radios. My all in one unit is the Yaesu VR-500. Tunes from 100 Khz to 1300 Mhz with some gaps. Has AM/FM/NAM/NFM/WFM/USB/LSB/CW. Fits in the palm of your hand, runs on two AA's. Digitally tuned, 1000 channels. Has a band scope, weather channels are pre-programmed. Using a Radio Shack telescoping antenna, have successfully heard Radio New Zealand (also using a Diamond VHF/UHF antenna), as well as WWV/WWVH from inside buildings. IMHO, a great little radio. Also there is software available for programming it. Some free, some paid. Also, to get the Narrow AM (which vastly improves AM reception), either Parnass's software, or a simple keystroke sequence will put that in. Just my two centavo's. Eric KA6USJ

I would bet yes. I've not used a "twin discone" however when compaired
against any normal discone its not even a close race....

The answers, in order, are "no" and "yes." I have neither a Regency
scanner nor a manual. These scanners were wildly popular with railfans
- train enthusiasts - so a vist to the Yahoo! group devoted to them
ought to prove helpful.

Get the Radio Shack one that is like the "ear buds" style for walkman
earphones. It has a foam covering and fits in the ear nicely with
excellent sound. They're only $3.00.

550. Is it okay to listen to a portable scanner on an airplane?

Newsgroup: rec.radio.scanner
Date: 2003-05-14 02:23:13 UTC
From: Paul Keenleyside <nospambcpl8z@telus.net>
Message-ID: <IMhwa.3094$3X2.1246851@news0.telusplanet.net>
Source record: 31379

Was just curious if anyone here had taken a portable scanner such as a
BC245XLT and suitable ear gear to privately
listen in on air frequencies while aboard a commerical jet airplane, flying
to any particular destination.

Is there any rule against it, do the airlines prohibit it?

Would use of a portable affect sensitive radio gear in the cockpit,
particularly if you were seated
port or starboard aft of the wings?

If it were possible, it would be very interesting to hear the radio traffic
from the cockpit and
air traffic control.

Any commentary?

PK

>credibility. "It's astonishing how little support he has," the officer said.
>When a U.S. general asked the officer what he was hearing, the officer told
>him, "I'm sorry to say it, sir, but I'm afraid we're backing the wrong
>horse." In fact, this 58-year-old MIT-trained mathematician embodies the
>fractal contradictions facing the United States as its troops settle into
>the occupation of a country bitterly divided about its future, and a region
>passionately attached to the hatreds of its past. Who will lead Iraq? What
>role should Washington have in that process? Does it want a reliable client,
>or a ruler with popular support in the Iraqi street? Might Ahmad Chalabi
>eventually be that man?
> The greatest burden Chalabi bears continues to be the widely
>repeated allegation that he's a crook. The NEWSWEEK investigation into his
>family's business reveals a complex man maneuvering in a world where money
>often is put to the service of politics, and politics is a life-or-death
>occupation. From previously secret court documents in Switzerland, as well
>as interviews with concerned officials in Amman, Beirut and Geneva, it is
>clear that the Chalabi family banks would have been in serious trouble
>regardless of Saddam Hussein's machinations. But Chalabi's extremely close
>ties to the inner circles of the Jordanian government-at a time when Jordan

>was becoming increasingly dependent on the Iraqi dictator's good will-surely
>heightened those risks.
>
>
> The story begins with Chalabi's father and grandfather, who had been
>prominent politicians as well as businessmen when a Hashemite monarchy
>(installed by the British) ruled Iraq from 1921 until a military coup in
>1958. Forced into exile, the Chalabis built a banking business abroad,
>founding financial institutions in Geneva, Beirut and Amman. In 1977, Ahmad
>established Petra Bank in Jordan, which grew over the next two years to
>become the second largest of the 17 banks in the country. In the
>ultraconservative financial environment of Jordan, Petra stood out for such
>local innovations as the introduction of ATMs and Visa cards.
>
>JORDAN AND SADDAM
> But by the late 1980s, according to former Central Bank director Said
>Nabulsi, Jordan was facing a financial crisis. Much of the country's income
>had been in the form of contributions by rich Gulf states. Those dried up,
>yet spending continued, especially on arms deals with lucrative commissions
>for some government officials. By 1988, the Central Bank's foreign-exchange
>reserves were exhausted, said Nabulsi, and the Jordanian dinar was forced to
>devalue by 50 percent. The effect was to make Jordan ever more dependent on
>its one loyal Arab benefactor-Saddam Hussein.
> At the same time the Chalabi family bank in Switzerland, Mebco
>Geneva, had come under scrutiny from Swiss regulators. In April 1989 they
>revoked its license. "The result of this action in Switzerland was to cause
>a run on the other financial institutions in the group [Mebco Beirut and
>Petra]," says Chalabi. He claims that by mid-May the situation had been
>"stabilized." But as Swiss investigators, the Jordan Central Bank and the
>Lebanese stepped up their inquiries, more and more dubious loans from one
>Chalabi institution to another surfaced on the books.
> Chalabi initially thought he could ride out the storm. He was more
>than just a banker in Jordan; by this time he was the personal benefactor of
>many of the country's officials. "I made it a policy of Petra to provide
>loans in small amounts to military officers, NCOs, soldiers, Royal Guards
>and intelligence officers," says Chalabi. "The royal family, apart from the
>king [Hussein], were always in need of cash, as their income and sporadic
>gifts from the king were always less than what was required to sustain even

The last time I took a programmable scanner aboard a commercial aircraft (several years ago), all I could pickup was a high-pitched whine on all frequencies. I have no idea what in the aircraft was causing the interference, but it pretty much made the scanner useless.

the biggest problem of this antenna is... the price : 90 euro (ï¿œ)
without shipping (10ï¿œ i think)
possible to find it less expensive?
how can i compare the "scantenna" and this "twin dixconne"

tnx

Paul,

I think this subject has been discussed on this NG in the past....

You appear to be from the Lower Mainland, so I'll assume you will be flying Air Canada. Prior to departure, the flight attendants go through an extensive list of what may, or may not be used on the aircraft. On Air Canada flights, cellphones can be used until departure from the terminal, and not while aloft. Laptops can be used once the aircraft has taken off and the seatbelt light is turned off, but not with any outboard peripheral devices (external floppy drives, etc). They also say that "...for any other devices, please ask the flight attendant...". I'm guessing that scanners would fall into this category...

Personally, I've taken my AR8000 on many flights. I usually get a window seat if I can, and place my scanner between myself and the window, out of sight of prying eyes. I've never asked a flight attendant for permission...my bad. As for monitoring inflight communications, it can be interesting following your flight from ground control to departure to approach, but really it is no different than what you listen to on the ground. I find it more interesting to sweep scan "utlility" frequencies, like 148 to 174mhz, just to see what's there. HF frequencies like Shanwick and Gander Oceanic were interesting as well, although these aren't available on your Bearcat.

Something to keep in mind, you will certainly be asked to turn your scanner on when clearing security, to prove that it is not a naughty device. You may also be asked some pointed questions by security...I usually tell them that my scanner is an expensive piece of electronics that I would rather not trust to checked baggage, and they leave it at that. As well, you can imagine that post-9/11, some of your fellow passengers may be alarmed at seeing someone fiddling with a radio device while in flight, and in a worse-case scenario, you may find yourself in the prone position with a Sky Marshall's 9mm stuck in your ear...so be discrete...

As for any effect scanners may have on aircraft radio gear, even though a scanner is made to receive, it does generate a very slight RF signal...just try putting a frequency counter next to your BC245XLT if you don't believe me. However, I have discussed this in detail with radio technicians at work, just to confirm that I would not be putting a flight in peril by using my scanner. I am told that the signal strength is negligible, and of no danger to the aircraft.

Hope this answers some of your questions...

Darrell

Hi All,

As a complete novice/tenderfoot into the Scanning Hobby, which handheld scanner would be a good affordable unit to start with? I currently have a few HF radios including a Kenwood R-5000 with VHF converter (108MHz - 174MHz). Beyond the narrow VHF range I have access to I have no other scanning experience.

Any recommendations welcome.

Hanno

Morning,
Where are you located? Look at the list at Universal Radio
and see what you like. I have a BC 245, I could afford this
one at $219 plus shipping The 245 works well for me and I'm
happy with it.

Burr

Howdy,
I bought a Radio Shack Pro93, and it has been great. The Pro95 is their new model. It's same radio, but with 1000 channel memory instead of 300. To be honest, I don't even have half of the 300 channels programmed in mine. Most of my listening is to the County's trunked radio system. Columbus (Ohio) Police and Fire are on it, as well as a few of the suburb departments and Port Columbus police (My dad is a cop at the airport). My dad bought one too, and I cloned my radio to his (I like the computer/radio interface) and now he keeps an eye on things at the airport when he's at home without having to bring his walkie home with him every day.

I don't have personal experience with the Uniden unit, but I've heard very good thigns about the Bearcat 245xlt also.

Hope this helps!
Matt

There's always one...

Please cite the regulation that expressly prohibits radio scanners. I've yet
to find one.

Did you connect the audio output of your scanner to the soundcards' mic port?

Did you make sure no other programs are using the soundcard when you try to record (such as Winamp, Media player, etc)?

Can you record from your scanner using SndRec32.exe (included with windows)?

Very carefully.

OK, now that you're done laughing...

Any suggestions on how to 'attach' the scantenna to my house? I see
that I need a mast - I've never built anything like that before, so I
need some help. Anyone?

Thanks,

-sam

Hello, Gill,

I think Paul is from British Columbia, so I'll stick to Canadian Regulations. As far as I know, there is nothing in Transport Canada regulations that forbids the use of a scanning receiver on an aircraft. As for an RF signal, I agree that the BC245XLT definitely emits one, as do all radio receivers to some degree. As a Ham Operator, I'm sure you know that these so-called "spurious emissions" must be within acceptable limits to attain certification in accordance with the respective countries' regulations, and international agreements. I think the FCC is responsible for this in the US...Industry Canada here. This Industry Canada document details the limits in Section 7:

http://strategis.ic.gc.ca/pics/sf/rss215i1.pdf

The searchable database of accepted models is located here:

http://strategis.ic.gc.ca/cgi-bin/sc_mrksv/spectrum/reltelSearch/search.pl?lang=e&db=rel

I see most of the Uniden Products are certified here in Canada, although my AR8000 and Icom ham rig aren't there...hmmm.

Anyway, that being said, if I were told to turn off my scanner on a flight, I would definitely do so....I have a sneaking suspicion that refusing would earn me a one-way trip to the crowbar hotel, despite any regulations that may or may not exist...

Darrell

>
>There's always one...
>
>Please cite the regulation that expressly prohibits radio scanners. I've yet
>to find one.

In my arrogant and well informed opinion as both an electrical engineer and as an instrument rated private pilot, he's wrong. It's not against FAA regulations; but there is a regulation stating that if any of the following: the airline company, the aircraft owner, or the pilot in command object to your portable electronic device being operated on board the aircraft, you must shut it off.

It's all right there in the Code of Federal Regulations, Title 14, Section 91.21

Read about it here:
http://a257.g.akamaitech.net/7/257/2422/14mar20010800/edocket.access.gpo.gov/cfr_2003/14cfr91.21.htm

The bottom line is this: there are phases of flight where being a bit off course is no big deal. If you want to play with your toys during those times, let the cabin crew or pilot know and have at it.

But if you're devoted to your scanner to the extent that you can't live without it for a few minutes while I conduct an instrument approach in gooey weather, I'll reserve my right as pilot in command to destroy that scanner with my crash axe.

I need to dispel another myth. Even though a radio was certified under part 15 of the FCC rules (Title 47), it doesn't mean it can't interfere with an aircraft's systems. The unit might be defective, it might not have been certified with peripherals, it may even be completely legal. That doesn't mean it can't radiate. It only means that it won't radiate much. The chances something will go wrong are exceedingly small, but they're not zero. There have been cases of just such interference documented by the Aviation Safety Reporting System (ASRS) of NASA.

Of course, I am not a lawyer. But don't expect one to tell you anything different than what I just wrote.

73,

Jake Brodsky, AB3A mailto:frussle@erols.com

I'd say that the extra money to go with separate radios is worth it.

I have never gotten worse HF performance on any other radio I've
owned, than my AR3000A.

Correct. Thank you for the clarification that the OTHER poster failed to
mention while he was talking out of his arse.

> The bottom line is this: there are phases of flight where being a bit
> off course is no big deal. If you want to play with your toys during
> those times, let the cabin crew or pilot know and have at it.

What I'd like to see is how much radiation is emitted versus a large laptop
(of which just about every business class flight has half a dozen going
throughout the entire flight.

If my little scanner causes all these problems, then Joe Business Suit with
his thinkpad will cause far more.

> But if you're devoted to your scanner to the extent that you can't
> live without it for a few minutes while I conduct an instrument
> approach in gooey weather, I'll reserve my right as pilot in command
> to destroy that scanner with my crash axe.

As well you should. And you would have that right, as stated in the regs you
cited. If I refused you could have me arrested on federal charges.

I've never had a problem with my scanner on a plane. On one flight I got to
listen the whole way, on another, the stewardess asked "what is that" and
when I explained it she asked that I put it away, which I did. No problem.

Thanks Jake for clearing that up - I hope that answers the question once and
for all (because it's becoming an annual tradition!)

What would be your definition of affordable? Under $200? Under $300? How high are you willing to go?

One thing I have learned is that having MF and HF on a handheld is essentially useless, especially if you already have a good setup with your R-5000 (nice receiver!). For that reason, you can save money by just concentrating on a VHF/UHF model.

You need to define your requirements (besides cost):

- A Trunking scanner (such as the Radio Shack PRO-95) would be good if the local or state police and emergency services in your area are using trunked systems.

- Do you want FM and TV broadcast reception (Wide FM receive mode)? Some of the lower cost scanners do not include those bands.

- If you explore a lot, I recommend a model with direct frequency entry (numeric keypad).

- Do you want SSB capability? That will limit the handheld playing field considerably. If so, the Yaesu VR-500 might be for you.

- is a used model OK? If so, the Sony ICF-SC1 is a solid performer, but possibly a little hard to find. There are many other good choices as well, of course.

- do you need lots of memories? If so, you might want a model that supports a PC interface for managing them (a must in my opinion).

- does size matter? (radio size, that is 8^o)

- do you want a cell unblocked (or easily unblockable) model? If so, you might want an export or older USA model...newer USA models are often impossible to unblock.

After you think about these things, it will be easier to zero in on potential models for you. Also check out the reviews at http://www.strongsignals.net

576. Re: Is it okay to listen to a portable scanner on an airplane?

Newsgroup: rec.radio.scanner
Date: 2003-05-15 00:07:35 UTC
From: "F. Barry Mulligan" <mulligan@acm.org>
Message-ID: <bTAwa.72233$4P1.6583680@newsread2.prod.itd.earthlink.net>
Source record: 31155

The FAA established a rule (FAR 91.21) barring the use of Personal
Electronic Devices on board commercial aircraft, then specified a number
of exceptions. In particular, airlines may allow PEDs which they have
determined do not pose a hazard. Most airlines have sharply restricted
or banned scanners, but Delta was a significant exception. I haven't
checked the post-9/11 rules, but previously on Delta you could use your
scanner at cruising altitude, but not during climb or descent or on the
ground.
Rich Well's site should have a good plain language description of
FAR 91.21 and its implications.

"Paul Keenleyside" <nospambcpl8z@telus.net> asked:
> Would use of a portable affect sensitive radio gear in the cockpit,
> particularly if you were seated port or starboard aft of the wings?

The electronics are distributed through the lower compartment and
an aft seat might be directly above a receiver. As to the actual risks,
ASRS (the NASA Aviation Safety Reporting System) has received a
significant number of incident reports from pilots and controllers. The
May 1994 issue of "Callback", the monthly safety bulletin from ASRS, had
some very specific descriptions of inflight incidents with PED interference.

You could first mount the ScanTenna to either a 5' or 10' piece of TV mast which you can get at HomeDepot or any builing supply store. Then you can get chimney straps to fasten the mast to your chimney if you have a chimney. That is how I mounted a 30ï¿½ telescoping mast which has a Create Log Periodic beam mounted on.

My ScanTenna I did something different with. If you go here: http://www.milaircomms.com/antenna_mounted_amplifier.html youï¿½ll see an article I wrote about antenna amps. If you scroll down youï¿½ll see pictures of how I ï¿½mountedï¿½ a ScanTenna and ScannerBeam. If you read the last paragraph on that page youï¿½ll see a description of this ï¿½differentï¿½ type of antenna support. This might help you.

Didn't I already explain this?

The newsposting host which this StaggerLee idiot is posting from, appears to be Cotse.net. This Cotse (Church of the Swimming Elephant) is a quote, unquote internet security company that provides anounymous newsgroup access to people.

While internet security is good and all, these dopey Cotse morons allow just about every type of behavior, good or not, on Usenet and will refuse to drop a disruptive user without anything short of a court order to cease and desist.

--
Saddam has fallen. Iraq is free.

God Bless The U.S.A.!

(Re-worded entirely)
The following is a list of morons.
That's all. Just morons. Doesn't matter
what they've done or what they said,
it's all been equally moronic.

The moron list: (Now in order of highest to lowest stupidity)

The top moron in any group on Usenet is Gandalf Grey - gandalfgrey@infectedmail.com - alt.current-events.clinton.whitewater (Yes Hanson. I do post your name in every one of my posts and now you're at the top)

Bush Busta / A.K.A Jim Kennemur - BushBusta@America.com - alt.current-events.clinton.whitewater (Usually giving Gandalf the reach around)
banjocat - banjocat@bellsouth.net - alt.current-events.clinton.whitewater (Fuck you and you threats)
Gary Roselles - rosell19@enetis.net - alt.current-events.clinton.whitewater (Escapee from Rapid City Regional Hospital's psychiatric unit)
Dr. Fred Hambrecht Sr - w4jle@charter.net - rec.radio.scanner (Threatened to tell my ISP cuz I was cussin' on Usenet. Didn't work)
Al Patrick - arp@inet4u.com - rec.radio.shortwave (Thinks God kills people for listening to Rock & Roll)

Usenet User - pkeller@mil.edu - rec.radio.scanner
Jon Van Allen - kf7yn@qwest.net - rec.radio.scanner
MnMikew - MNMiikkeW@aol.com - rec.radio.scanner
Lou Scannon - scannon@lmountain.com - alt.current-events.clinton.whitewater
Steve Hiner - shiner@tampabay.rr.com - alt.current-events.clinton.whitewater
ad lib - leedesi56@yahoo.com - alt.current-events.clinton.whitewater

Good points Doug!

Alas, my trusty Pro93 doesn't do Wideband FM or TV, or SSB... and is cell blocked.

For me, these things don't really matter too much... I'm not interested in listening to people's phone calls, or listening to TV broadcasts (let alone watching the thing), or listening to commercial radio stations (a $20 walkman would probably sound better anyway for that)... For the most part, I'm really only interested in the local trunked system... but definitely make sure you've figured out what you want to use your scanner for so you can make sure you get one that is a good fit for your interests.

Good luck!
Matt

593. Re: How do you mount a scantenna?

Newsgroup: rec.radio.scanner
Date: 2003-05-15 04:31:42 UTC
From: Burr <pitzpho@earthlink.net>
Message-ID: <3EC326BC.2070505@earthlink.net>
Source record: 31172

What I did,

I took a 10' radio mass pole from the local hardware store and drove a rod in the ground beside the house. I put one end of the pipe over the rob to keep the end from moving.
I put a "U" thingy over the pipe and against the house eve and screwed it in. I put another piece of pipe in the other pipe and put a screw in it so it would not turn.
Then I put the antenna on and clamed it so it would not turn. After I had it set just like I wanted it I put a screw through the "U" clamp to keep the hold thing from turning.
Now that you have the idea I built everything but the "U" clamp on the ground then tilled it up and camped it in place against the house. The pipe in the ground serves to ground the mass and a "teleco" ground unit servers to put a ground close to the antenna leads.

Good luck and have fun. You may want to modify this a little to make it fit your house.

weeks
> ago!

You didn't read carefully. The edict applies only if the US Marines are
threatened. Your statement says that they can
go out and pot off any looters willy-nilly. They cannot do any such thing.
It was clearly and plainly said by the powers
to be within the military on the news.

The best thing would be to have the US Marines return to the United States
and essentially have the U.N. Peacekeeping
forces in there led by the Brits. The U.S. has done the job that needed to
be done, so now it's time to pack up the tents
and head home, boys.

If only the U.S. would speed up the rebuilding of Iraq and let other
international resources in on the rebuilding process.
Seems that Iraq is being set as a division of Bechtel Corporation and
another large entity that Rumsfeld was in on.

But enough of international affairs. This is a scanner newsgroup.

Well, I can't take any more of this tripe.

Problem is that you demolib anti freedom folks are finally seeing up close and personal just what is involved in defending your freedom. It ain't pretty, sometimes. It takes a lot of pain, a lot of time, and a lot of blood. You don't like to face up to what it took in the past so that you could sip your lattes and piss and moan about the way things are.

Got a surprise for you. The world is at a crossroads. If civilization is to survive, we have to take a stand, and things in the world have to change. Some people aren't going to like that. Some people will be hurt. Some people are going to rant and rave and cry about lost fredoms and leaving other countries alone. But if action is not taken, the forces of chaos will win, and if they win, it will mean a long dark age of terror, one from which humanity may not rise again.

So pick your side. Are you with the forces of civilization or the forces of chaos?

> 11,000 Feared Buried in Mass Grave in Iraq
> Wednesday, May 14, 2003
>
> MAHAWEEL, Iraq - American soldiers were helping villagers pull thousands
of
> bodies out of a mass grave (search) in central Iraq on Wednesday. About
> 3,000 corpses have been exhumed so far, and U.S. military officials say
the
> total could reach 11,000.
>
> Many of the victims are believed to have been murdered during the 1991
> Shiite revolt against Saddam Hussein's (search) regime.
>
> "About 20 percent of them were buried alive, because they had no bullet
> wounds, but their hands were tied and they were blindfolded," said Amer
> Shumri, an official from the governor's office in Hillah.
>
> Fox News learned that 719 bodies -- including women and children -- were
> identified through documents found on or near the bodies.
>
> The mass grave in this village outside Hillah, 60 miles south of Baghdad,
is
> the largest found in Iraq since U.S. forces overthrew Saddam and his Baath
> Party (search) government last month. It's believed there may be dozens
more
> sites like it in Iraq.
> Hundreds of people from nearby towns and villages watched from behind a
> barbed-wire barrier as sets of remains were pulled from the field and set
> aside wrapped in plastic bags, sheets and blankets. Some of the skulls
still
> had tufts of long hair, and officials said they probably were women.
>

> People searched desperately for anything that could help identify the
dead.
> Faded identity cards, certain dental structures, wallets, eyeglasses and
> broken bones were among the clues people looked for to try to identify
> family members who were among the 200,000 people who disappeared in Iraq
> during the past decade.
>
> Bushra Jabbar, 43, was overcome by grief when the bodies of her mother and
> two sisters were dug up. She threw the dirt from the graves over her own
> head, as if to bury herself with it, Reuters reported.
>
> "Here they are. These are the bodies of my mother and my two sisters,"
said
> Jabbar, sitting in the dirt and wailing as workers dug up her loved ones'
> remains. She said she recognized her mother from her long braided hair and
> her golden jewelry.
> Many of the onlookers were weeping, and some chanted: "There is no God but
> God, and the Baath (Party) is the enemy of God." Several women were
holding
> pictures of their missing men.
>
> One woman wailed and wept while holding up an old picture of a loved one
she
> was searching for, waving her arm toward the tattered clothes still on the
> bones of victims at her feet.

Ever watch Springer, Ricki, Jenny, Montel, Maury or any of the dating shows? It's just like that - only live, uncensored and real! I've heard all kinds of things listening to cell and cordless phones - and I'd be glad to tell you all about it - but because it's illegal to do so I can only recommend you give it a try. Perhaps the most interesting time to do so is when your local bars close on Saturday morning. You can't imagine what it's like until you listen.

The greatest scanner event I ever experienced was when a local police officer was being arrested (he and a few other officers in his department had been dating a 15 year old girl) and he barricaded himself in his house. He was just up the street from me, and I was not permitted to leave my house because the police had my neighborhood locked down. I had at least 5 scanners going at all times and 2 of them were trolling the cellular bands. I heard the most incredible information on the cellphones and cordless phones about the incident - including the police negotiator talking to the officer on his cordless phone! It was awesome and I just wish I had recorded what I heard so I could share it with folks now that it's over and done with - although I guess that would still be illegal. The incident ended after 24 hours when the police stormed the house and found the officer had shot himself about 4 hours earlier - something I already knew.

You can't get drama like that anywhere else. Believe me.

Given the time he has (So Damn Insane) had to hide stuff and the size
of the country (about the same as California) I could hide something
and you would never find it either
! Mobile labs, buried in bunkers in the desert, dumped into the
rivers and sea's, and so on. We might never find it, or if so then it
might be just bits and pieces of the stuff. But the graves, people
there had a good idea where they were so it is esier to find them.
Now I wish that you bitching liberals would shut the hell up! For
just the things that we know and have found out about, it justifies
this monster to be taken out, not including the rest of the things he
has been doing and reported to have done! So get over it all ready
you whiners, sheesh what babies you all are, take your bat and ball
and go home, the rest of us are tired of your BS. Oh and by the way
this is a warez group, not a I HAVE NO BRAIN AND WANT TO BITCH
group!!!!!!!!!

Stop into your local Radio Shack and ask, it's as simple as that, i.e. they will also have all the hardware you need to mount a mast on your roof, i.e. 5' and 10' mast , guy rings, guy wire, 12 kinds of roof, vent pipe, wall, chimney and tripod mounts. The easest is the 15-517 3' tripod mount a 15-863 10 foot mast 1 bag of 15-833 lag bolts, 62-1083 "ANTENNAS-SELECTION AND INSTALLATION BOOK :-) then stop into your local Lowe's or home center and pickup a can of roof patch tar to put over the lag blots. your total cost should be from $40.00 to $60.00 for everything, now get to work :-)

May work in the United States, but not up here in Canada. We don't elect
police chiefts and sherriffs up here
where I live are used to transfer bad guys from the Pre-Trial Centre to the
court house.

In this situation, you're pulled over for no apparent reason (the RCMP cop
says "Good afternoon, sir, do you know why I stopped you?"). He gives the
explanation, and you hand over the registration, and licence.

You sign off the blue ticket you got and say to him. "Oh, Officer, just one
more thing.."

You raise up a brown and white striped box that says "Tim Horton's Donuts"
on it and angle it out towards him.

You smile and say "Timbit?"

Timbits are donut hole centres that are very popular in Canada.

(cue "Bad Boys" ending theme for COPS)

Backing to scanning...

"One Adam-12, One Adam-12 meet One El-Twenty on Tac two.."

"Station 51, Engine 18, truck 127 structure fire..."

Last week "Q" posted a message with a subject like "How can Ben and
Jerry be wrong?"

It was a forwarded message with one set of ">". The end of the
message was a typical "You got this because you subscribe to our
stuff" paragraph. It started:

This message was sent to w4jle@charter.net ...

Someone in a rush to generate tons-o-political spam might forget to
remove their email from the body of the text.

The message was canceled.

QRZ says w4jle is Frederick G Hambrecht.

Fred has an interesting history on usenet.

>
> It's all right there in the Code of Federal Regulations, Title 14,
> Section 91.21

Er, no. What that regulation says is you may NOT use a portable electronic
device other than very specific exceptions, period, unless it is authorized
by the Airline (not the pilot, in the case of an airline). An airline
could, perhaps, delegate that authority to a Pilot In Command, but the pilot
does not, by the regulation, have authority to allow you to use a scanner
unless the airline has ok'ed that.

Sec. 91.21 Portable electronic devices.

(a) Except as provided in paragraph (b) of this section, no person
may operate, nor may any operator or pilot in command of an aircraft
allow the operation of, any portable electronic device on any of the
following U.S.-registered civil aircraft:

(1) Aircraft operated by a holder of an air carrier operating
certificate or an operating certificate; or
(2) Any other aircraft while it is operated under IFR.

(b) Paragraph (a) of this section does not apply to--
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;

(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the aircraft has determined will not cause interference with the navigation or communication system of the aircraft on which it is to be used.

(c) In the case of an aircraft operated by a holder of an air carrier operating certificate or an operating certificate, the determination required by paragraph (b)(5) of this section shall be made by that operator of the aircraft on which the particular device is to be used. In the case of other aircraft, the determination may be made by the pilot in command or other operator of the aircraft.

Since you don't know your ass from a hole in the ground maybe you'd like to
show me where 91.21 expressly prohibits RADIO SCANNERS? That's what I asked
to see, fjuckwit, and the only reply I got was 91.21

You tell me how *I* was wrong. Go ahead, I'll wait.

Mmm hmm. Didn't think so.

Next!

Don't have to:

" (b) Paragraph (a) of this section does not apply to--
(5) Any other portable electronic device that the operator of the aircraft
has determined will not cause interference with the navigation or
communication system of the aircraft on which it is to be used."

Looks like the pilots OK is all the FAA requires. No where in this document,
or any other FAA reg, are RADIO SCANNERS expressly prohibited. I asked for
the one expressly prohibiting them and voila, it doesn't exist.

So. When are YOU gonna be a man and shut your pie hole?

BZZZZZZZT! WRONG!

OPERATOR of the aircraft implies the PILOT.

OWNER of the aircraft would imply the AIRLINE.

Get it? OPERATOR flies the plane that OWNER owns.

Just like OPERATOR OF THE VEHICLE AT FAULT would describe you, not the
agency you rented the car from. If you don't believe me, rent a car, wreck
it, and tell us who gets the bill. This is not hard to understand.

Jeez, he even quoted the whole regulation as proof. Where do these people
come from?

623. Uniden 785D and weather alert, please help.

Newsgroup: rec.radio.scanner
Date: 2003-05-16 01:59:04 UTC
From: "Time for a change"@notvailid.com
Message-ID: <vc8hb57fmimfec@corp.supernews.com>
Source record: 31202

The following is a letter that I sent to Uniden Customer Support, an as of yet unanswered letter. It describes problems that I am having while attempting to use my Uniden 785D in the weather alert mode. Can those of you that have this model, or the Uniden 780 read the following and see if it squares with your experience on the equipment that you own. Any help would be greatly appreciated.

Regards.

From the 785D instructions is the following:

"You must program the FIPS code to identify the area where you are located.

1. Press Menu.
2. Select 1:Service Option 1: Weather 2: Alert by rotating the VFO and pressing E.
3. Select 1: ON by rotating the VFO or using /\ or \/ and pressing E.
4. When the unit receives a warning signal, it show a message with the alert siren defined.
5. To deactivate, just press any key......

Programming the FIPS code.

1. Press Menu
2. Select 1:Service Option 1: Weather 2: Alert by rotating the VFO and pressing E
3. Select 1: ON by rotating the VFO and pressing E.
4. Select the desired memory number (FIPS code 1~15) by rotating the VFO and pressing E. When you rotate the VFO or use \/ to move down when FIPS code 1 is displayed or the VFO or use /\ to move up when FIPS code 15 is displayed, ALL FIPS appears on the display.
5. Press E."

Herein lies the problem, first of all, the instructions say nothing about "entering" the codes, the instructions simply leave you in the cold from this point on. Secondly, when the codes have been placed into a desired memory location how does one select that location and verify that the correct code has been selected? If you follow the instructions as contained in the manual, it leads to a perpetual loop of confusion.

Under the Programming the FIPS codes, it says to select the desired FIPS memory number by the VFO or /\ or \/ Keys, then press E. All this does is enter the EDIT mode, which allows you the ability to enter the code in the first place, and the edit mode isn't even discussed in the manual.

There needs to be an absolute way to select and verify that the correct FIPS memory location is programmed into the radio.

Even though I select the code (in FIPS memory location 1 for my area, 042003) the radio Alerts for areas outside my county, but a second weather radio I have doesn't.

We went to Lake Erie this weekend and chose to take the 785D as a weather alert radio. Though the radio was successfully alarmed by the NWS about 8 times, the real difficulty comes when the radio is shut off and turned back on (or if the power fails and is restored). It starts scanning my programming frequencies and not to the Weather Frequency that it was set on when shut off. This poses the horrifying aspect, (even with the usual "Uniden cannot be held responsible for" boilerplate) that the radio will fail to perform adequately when needed. If someone has an inadequate knowledge of radios in general, and is not careful enough about examining the settings and checking on the radio, they may falsely believe that they can relatively expect to be alerted if the NWS issues a warning for their area. Also, the FIPS code was again a problem. The code for my Lake Erie location was 039007, and was in FIPS memory location 2, the code for my hometown is 042003, and is in FIPS memory location 1. I would use the instructions, as shown above, to select the FIPS memory location 2, then I would later check to see if it was set on 2. It never was, it was always on 1, save for when it was set to the ALL FIPS setting, which could reliably be returned to for checking. I left it on ALL FIPS, since I didn't want to avoid the Alerts, but I would rather have selected the one for only my Lake Erie county.

The frequency we needed to use near Lake Erie was 162.400 and my hometown frequency is 162.550 Every time I turned the radio off, then later back on, then turned on the Alert mode, the radio was always back on 162.550, and not 162.400 As there was no reception on 164.550 where I was located at Lake Erie, I would not have received any Alerts from the NWS.

Overall, I suspect that the problem does not lie with this particular Radio, but with the inherent programming of the 785D radios, and with inadequate documentation (the instruction book), especially concerning the Weather Alert feature.

Storms are wreaking havoc on the country as I speak, and many people may have come to rely on their radios for warnings. I wish you would make serious inquiries into the suitability of this radio for the Weather Alert system, especially as it is now.

"In a world of insane people, the sane man must appear insane".
"Just because you're paranoid doesn't mean that someone isn't after you".
"Beware: I masticate in public".

there is another thing to see, verify if in the recording proprieties
of windows (volume control, options, proprieties, recording
proprieties, click ok)
now look if your recording source is mic (if you use mic entry) or
line(if you use line entry)
and verify the volume level

i hope this helps you

With law enforcement folks moving onto truniking systems up on uhf and
800/900, soon 700 Mhz
a lot of skip traffic is going by the way side. Looking forward to
programming the BC 250D chain search feature with slices of the 30-50 Mhz
band for skip work! The HF bands are not very active
either. Had some out standing VHF tropo-ducting skip earlier this spring.
It was from the SC area
in the mid morning to so. NH around 151.MHZ.

Amen! I have the BC250D, the 785's little brother and I love it, but I
detest the manual.
I think the programming is okay, but again the manual falls far short.

That's dialog? Perhaps you can tell us just why it was necessary for the US to launch an unprovoked attack on another nation, an attack that killed thousands and did billions in damage that we the taxpayers will now have to pay for -- to Mr. Cheney thrugh Halliburton? Where are those weapons of mass destruction? Please be specific. But I just gues you war monger aplogists just won't give up no matter how your protestations, one by one or en mass, are torn down. No WMD, no gas, no biological agents, no nukes, no long range rockets -- not one scud -- no effective air defenmse, no long-range drones, no nothing. Followed by total incompetence.

633. Grounding Of Quest.: Re: How do you mount a scantenna?

Newsgroup: rec.radio.scanner
Date: 2003-05-16 11:56:41 UTC
From: Robert Rose <rgsrose@tiac.net>
Message-ID: <ba2jli$i3u$1@slb3.atl.mindspring.net>
Source record: 31212

Hi,

Am presently about to mount the Scantenna ST2 which I just bought.
Still a bit concerned that I am grounding the antenna correctly.

Looks like everyone here earth grounds their vertical support tube, which
also grounds the Scantenna's square
horizontal mast thru its clamp. This, I also, plan on doing.

Was wondering about this, though:

All the elements, but one, are insulated from the horiz. ST2 support mast.
No problem.

There is one, small, vertical "element" (or stub?) that comes up from the
mast.

Any problem with having this earth grounded, thru the ST2 mast, and
therefore the subsequent supports that
are grounded ?

Bob

The posts you're talking about are apparently from a guy named Fred Hambrecht. He plays with headers to impersonate people.

See the thread titled "a warning to Q - identified?" for details.

Complaining to a troll is counter productive because it tells them they're succeeding in annoying you.

636. Re: Which Scanner will Do ALL This??

Well, a radio that's a good VHF/UHF scanner receiver will generally do poorly in the HF range; and a good HF receiver will generally be a poor VHF/UHF scanner. And none of these radios will do trunk tracking. An "all in one" will be a trade off in some respects.

I heartily encourage a bit more effort than that, at a minimum,
after running the bolts in, run 'em back out, get as much tar in the hole as
you can, dip the bolts completely, and then put 'em back in.
Myself, I'd cut some aluminum flashing into small (4x4 inch or so)
squares and use 'em where the bolts go - any increase in sealed surface area
between the environment and the hole itself is a Good Thing.

Can I split my ScanTenna lead in at the scanner so I can feed two
scanners off one antenna?

That way I could put all the military stuff on one radio and maybe set
them on each side of the work area and run them off two computers.

I think that will work fine, what part do I need from RS.

> BZZZZZZZT! WRONG!
>
> OPERATOR of the aircraft implies the PILOT.

Only to you. 'Operator' is very specific legal language to the FAA, and it is the AIRLINE, not the pilot. The holder of the operating certificate.

c) In the case of an aircraft operated by a holder of an air carrier operating certificate or an operating certificate, the determination required by paragraph (b)(5) of this section shall be made by that operator of the aircraft on which the particular device is to be used. In the case of other aircraft, the determination may be made by the pilot in command or other operator of the aircraft.

Operator is the airline. Note that 'in the case of OTHER aircraft' (not operating as an air carrier), the PIC can make the determination.

If I recall correctly, the Scantenna comes with RG-59 or RG-6 for the downlead off of the matching transformer, so the end of the coax should have an F connector. I'd use a standard cable TV splitter. It's also 75 OHM, and I believe most are rated through 850MHz - so it should easily handle the frequencies used. You may want to spring for a slightly better model that is rated to split DSS signals - they should be rated to 2GHz. You should know that by splitting the signal you'll lose signal strength of about 1/2 of an S-Unit that can easily be recovered by using an amplifier should you find it necessary. The best kind would be a variable strength coaxial TV antenna model that has the amplifier unit located at the antenna and the power/control unit in your shack. Good luck!

It is RG 6 but it has a BNG plug on my end. and that is what I will need
for both scanners.

How come you don't get all over Uniden for not answering this letter NOSPAM?

Why is it an absolute unforgiveable sin for Pozilla to not answer some email yet Uniden can get away with the same behavior? How come you don't have a "just say no" page for them too?

Maybe 'cause you're a hypocrite? No wait I know, it's because they have a phone number listed on their webpage.

ROTFL!

Hmm. Imagine that.

OK, I was wrong - no biggie. Thanks Skip, now I know for next time.

Still makes sense to me to ask the pilot. If it's the OPERATOR'S decision,
it stand to reason that they would tell the pilot what that decision was.

But to the point of the legal definition of OPERATOR, I stand corrected.

Well, of course. The path to war was settled within days of 9/11 and there was no way the Bushies would be thwarted. The whole UN thing was a sham. There was absolutely nothing Iraq could do to stave it off.

It is a truly shameful time in American history. But unfortunately, not unique.

What ever happened to the gold (LOTS OF IT) that was supposedly stored
in the basement of the WTC? I haven't heard that they every "found"
that.

I know they couldn't wait to ship almost all the metal to China. You
don't suppose there might have been drill marks on the beams do you?

Are you disputing the fact that most of the metal (steel) from the
building was shipped to China -- very shortly after 9/11 or are you just
being your normal self?

If it is the former put forth some evidence or continue to show the world what you are.

As usual, you completely skipped the main idea which was: What happened to the gold? I'll add one. Who are you covering for? :-) Some suspect this was the "perfect" bank heist!

If you're not comfortable with wiring up plugs yourself I'd suggest this - http://www.grove-ent.com/SPL2.html. It's nowhere near as expensive as the MULTI-COUPLERS by STRIDSBERG ENGINEERING, and if you find you need an amplifier can buy a decent TV amplifier like George did - http://www.milaircomms.com/antenna_mounted_amplifier.html.

Try this site

<http://www.strongsignals.net/index.cgi>

AT "FAVORITE PAGES" click on New Users FAQ also
check out the message board for information on trunking!
GOT TO THE BOTTOM OF THE BOARDS!
Look at the bottom of the frequency board for lots
if data bases through out the country and world!
Look up your local and the NASCAR track's frequencies to see if they
use trunking radio and/or APCO-25 DIGITAL radios.
Check the town or city place name where the race track is located on

<http://www.cityfreq.com:81/>

To find the frequencies for the tracks owners, venders and local
police/fire/EMS the helicopter charter service and towing contractors at the
racetrack.
This is low power work, the handy talkies get out about two (2) miles, form the
track!
And some NASCAR sites:

<http://motorsports.thepaddock.com/freqs.html>

<http://w8akr.dynip.com:8080/info.htm>

some frequency information:
<http://www.speedfx.com/article.asp?artnum=8541>
<http://www.telcoweb.net/racing.html>

Another place to look is the air band for helicopters that bring VIP's and
drivers to the races.
A check of http://www.airnav.com will turn up tower, approach
and departure frequencies. LOOK FOR A HELIPAD! They will have to be around
thirty (30) to fifty (50) miles from your location to receive the aircraft side
of the communications. To receive the ground side that would
be the TOWER, DPARTURE/APPROCH control, HELIPAD or the ground
side of the ARTCC stations remote transceivers, your location/receiver has to be
within
range, that's three (3) to ten (10) miles of an air band ground station!.
Scroll down to the bottom of the" airnav" airport pages to see if any web links

have air band frequenices listed for the business at the airport.
You should be able to hear both sides of the air band VHF-AM communications from
any HELIPAD adjacent to the speedway!
They may use DISCONE antennas with there radios, which then send/receive
skyward.

Another consideration is bringing/using a radio scanner aboard airliners
.

<http://www.fordyce.org/scanning/scanning_info/scan_fly.html>

.

Two New Users FAQ sections is "What's illegal" and" CTCSS & DCS (aka PL & DPL)"

The NASCAR web sites also mention states that ban radio scanners and/or require
permits!

I really like the preprogrammed SERVICE SEARCH capabilities of the UNIDEN®
radio scanners.
They search at three hundred (300) steps a second and allow LOCK OUT of unwanted

frequencies during the search, found frequencies can be □enter□ed into
channels. It includes the civilian VHF air band!
The UNIDEN® BC 250D has racing frequencies preprogrammed into the SERVICE SEARCH
and dose S.A.M.E. weather alert! It also covers the Military UHF 220MHz-400 MHz
air band! Down load a manual at Uniden® web site and check out their radios.

The PRO-94A will do both conventional
and trunking at the same time. Look for the "A" on the manufacture date code and
on the catalog/sku No. located on the bottom of the scanner. Here are the
manuals for the RS scanners

<http://support.tandy.com/support_electronics/2849.htm>

The first production PRO-94's will only
do conventional or trunking one or the other at a time-NOT BOTH! The PRO-94□s
are not capable of being programmed by a computer! The PRO-92 has weather alert
and searches /uses PL/DPL tones .<http://www.pro-92.com/>
It□s computer programmable! Buy the aftermarket PC cable and free software at
that site.

Here's a vendor that supports racing radios

<http://www.racingelectronics.com/>

They may, rent scanners and sell and download racing frequencies at the
track possibly free for folks who purchase
(Uniden® SC200 and there own Racing Electronics RE 2000) radios, form them! The
SC 200 will search out PL/DPL tones. The RC 2000 can use PL/DPL tones BUT WILL
NOT SEARCH THEM OUT! You have to know them, another good reason to have a vendor
'load' racing frequencies, IF THAT INCLUDES PL/DPL codes, into the radio at the
track! NOTE everything in the radio will be overwritten when a down load is
done.
So make a copy of what□s in the scanner radio□s memory BEFORE you go to the
track.
Take a list that has been previously researched for the local track, police,
fire, EMTs and
air band. Then after a vendor loads up the racing frequencies, key your list of

frequencies into another bank
(if they aren't already in with the loaded ones) if something happens or when
your leaving, bring-punch up the bank of local frequencies! You can do the same
for air shows.

Another place to us an air band scanner is at air shows
If you want to listen to the military air demonstration teams a UHF AM air band
, VHF 138-144 MHz-AM capable radio and one that has independent selectable MODE
I.E. AM FM nFM is needed This can really put you into the action!
Along with sunglasses, a folding chair and sun screen. Take along Walkman
headphones
and an extra set of batteries for the radio scanner and camera, one roll of film
should do, for NASCAR or air shows.

If you have a camcorder patch the scanner into the audio input jack with a
□Y□ splitter
so you□re able to listen with the head phones while recording the air show
performance. If the Camcorder audio has s monitor jack then run the audio cable
right into the camera while
listening via the headphones on the monitor circuit
Here is a schedule for air shows
<http://www.aero-pix.com/schedule/sched2003dt.htm>

And frequencies<http://www.monitoringtimes.com/html/mtairshows.html>
SCANNERS AND FREQUENCIES ARE NOT AVAILABLE AT MOST AIR SHOWS
Check out the individual air show's web site to see if they ban radio scanners
and two-way radios! At the entrance gates a security check is made and all
allowable bags are searched. Look for FAQ on the web sites for more information.

If scanners are bared for the show then keep it in the vehicle! Go in,
walk the flight line then leave about an hour before the demonstration and
listen off base! Or just find a public parking area off base, where other folks
have set up chairs and a RV or two to
listen and watch the flying from there.
Have fun this summer and be safe!
Jim

The gold was recovered very quickly. Though there was evidence that somebody tried to break into the vaults, they were unsuccessful. All the gold was recovered.
>
>I know they couldn't wait to ship almost all the metal to China. You
>don't suppose there might have been drill marks on the beams do you?

This is paranoia at its extreme. The metal was so much scrap, like it or not, and was sold to the highest bidders. Thgere was some mob involvement at the beginning where some metal was diverted to mob-connected business but that was quicklty squelched.

I haven't read any evidence of this gold or its theft/attempted theft anywhere, reputable or otherwise, until now. Care to cite resources or references which support this contention?

>Thgere was some mob involvement at the

Again, can you cite (or lead me to) any evidence of this being the case? Alex Jones or Birch Society scribblings don't count.
Linus

677. NASA 400 MHz Digital Trunk System

Newsgroup: rec.radio.scanner
Date: 2003-05-17 19:25:15 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3EC68C9B.1090608@licensed4fun.com>
Source record: 31054

NOTICE: I apologize for making another OnTopic post regarding Scanners and/or Scanning.

I just received my Digital Card for one of my Uniden 785D scanners. As many of you know I bought two 785ï¿½s about 2 weeks ago and from my first impressions it isnï¿½t that great of a scanner for the Air or MilAir fan. It suffers greatly from FM overloading however a Stridesberg FM Notch filter did help greatly, now after adding a $50.00 filter the 785D received ï¿½almostï¿½ as good as a 780 in the Air and MilAir bands.

The main reason I purchased a 785 was to see if I could monitor NASAï¿½s 400 MHz Astro Digital system. My first test (before my digital card arrived) was good. Since the control channel is analog the 785 (or any scanner that can trunk 400 MHz) can at least display the talk-groups and follow the frequencies, however youï¿½ll only hear digital noise during transmissions. The 785 seemed to work well at this.

Friday at about 6:30PM my digital card arrived. I put it in and like magic those digital beeps and buzzing sounds turned into real human (almost human sounding anyway) voices! I live 45 miles from the SLF (Shuttle Landing Facility) so signals were weak on my ScanTenna. One thing about digital transmissions, there is no "weak scratchy audioï¿½, its either a ï¿½1ï¿½ or a ï¿½0ï¿½. Meaning that if you get a scratchy signal youï¿½re audio will not just go ï¿½weakï¿½ it will actually drop out.

Seeing that you needed excellent signal quality in order for the digital card to work I switched to my Create Log Periodic antenna. For those not familiar with this antenna it is a Beam antenna with an advertised gain of about 12 dB. This is a $300.00 antenna, which is about the best you can get for VHF/UHF (however Iï¿½m not impressed with its 800 MHz performance). To my disappointment it couldnï¿½t receive the NASA Trunk system much better than the ScanTenna as there still were periods of dropped audio as signal quality was not good enough for proper digital to analog sound conversion. Next I tired my AntennaWarehouse Scanner Beam with 20 dB preamp (see article at http://www.milaircomms.com/antenna_mounted_amplifier.html for full details of this antenna setup). WOW! On this setup the control channel was coming in FULL signal strength on the 785ï¿½s bar-graph S-meter. On the ScanTenna I was only getting 2 bars (6 is full strength), on the Log Periodic I was getting 3 bars, but on the ScannerBeam w/preamp was getting the full 6. On this setup I was getting excellent signals and very few dropouts.

Reception is not perfect. I donï¿½t know if its possibly Iï¿½ve not programmed the 785 to trunk this system correctly or not. I got my frequencies for the system from ï¿½East Central Florida Scanner Pageï¿½

(http://home.cfl.rr.com/scanner/brevard.htm). I will say that the Monitoring Times/Grove website is grossly outdated regarding the NASA trunk systems frequencies as well as base freq. However the ï¿½East Central Florida Scanner Pageï¿½ does provide freqs, base freq and correct offset to get you going. They also have a few talk groups listed for the system, as of yet (remember its less than 24 hours) Iï¿½ve only heard on of the talkgroups listed on the ï¿½ï¿½East Central Florida Scanner Pageï¿½ which was group 2576, KSC Instrumentation. Below Iï¿½ve included a list of talkgroups which I did hear but not listed on the ï¿½East Central Florida Scanner Pageï¿½ site.

10288 = Control, Security Launch Console ï¿½ simulcast of 173.6875 MHz
10320 = Medical, might be the old net 117 on 173.4375 MHz but not confirmed
11536 = ???
10304 = Net 105 Nasa Safety ï¿½ simulcast of 173.6625 MHz
12496 = Launch Support ï¿½ simulcast of 162.6125 MHz
14096 = Utilities Base Ops ï¿½ simulcast of 171.0000 MHz
672 = ?? kept talking about X-Rayï¿½s On/Off late into the evening.

Since I have NASAï¿½s analog non-trunk freqs programmed into other scanners it was easy to see which talkgroups were being simulcast on the older analog freqs. However there were some talkgroups which are not being simulcast so it will be interesting to see what new NASA things can be heard which have been removed from the analog freqs. You can find a list of the NASA freqs (analog) at http://www.milaircomms.com/uhf_ksc.html.

George, I thoroughly enjoy your posts, and I am seriously envious of your "target rich" monitoring local. I am not digital capable yet, will wait for your opinion of the upcoming release from radio shack. Excellent website also.

Regarding you voice quality observation, I thought I read somewhere that digital radios (transmitters) tweak themselves over time, so maybe you will notice an improvement.

I look forward to yours (and most others) observations...

Glad you find good info in my posts. Regarding R/S's new scanner. I
can't wait for it to come out as from what I hear it will be in the
$300-$400 range and that includes digital. The Uniden runs $330 + $280
for the digital card bring the total to over $600.00. It will be
interesting to see R/S's new scanner.

About the "tweaking" on the audio. On the Uniden 785 there is a menu
you can play with audio quality. Its hard to play with because it needs
to be done on each frequencies of the system. So you have to wait on a
freq and wait for a comm, do the tweaking before the comm stops. Its a
major pain in the butt. However according to one display the sound
quality is already considers about as good as it gets. And its not bad,
just not as good as the analog transmission.

That's hilarious true or not! Comparable to the Beatles' "Lucy in the Sky with Diamonds".

I have no idea where the steel went after it came down, but why would it go to China??? There are plenty of scrapyards that can melt it down just fine here, where did China come into it??? What is this China thing you have suddenly? I don't understand the jew thing, but China?? WTF? What about the Soviet tanks and planes, and the secret troops in the US?? Must be hell believing in all that conspiracy shit. Do you sing (to the tune of "I enjoy being a girl") "I enjoy being a kook"? Oh, one more thing, who gives a shit if the steel did go to china, scrap is scrap, or, let me guess, it's to hide the "evidence".

>
> If it is the former put forth some evidence or continue to show the
> world what you are.

You sure are showing the world what you are Al. Where does China come in, I don't get it. What "evidence" do you have, Pastor Peters tell you? The chinese invasion around here seems to result in too many lousy chinese restaurants. Ohhh, that's it, they are plotting to feed us MSG or some other "toxic" substance to TAKE OVER THE COUNTRY. Sheesh.

>

Well, let's take a guess, could it be that the OWNERS came in and took it out?? Kinda hard to steal your own loot. You got me Al, I got a 1% cover up fee for spreading lies about the gold and steel. Even you have to realize you are getting way out in the fringes of kookery here, I just wish you weren't serious, but you are, I guess.

If you ever figure out what you're trying to say here, let me know.

I called Uniden, talked with a customer service representative, and they reviewed, verbatim, the same manual that I had in my hands. The representative could supply no other suggestions, he forwarded my complaint (via e-mail) to another rep, who in turn recommended that I send my radio to them for repair (even though it was never established that there is a problem with it).

Modern life, you gotta love it.

Thanks to all that responded, I'll post the results if anything constructive comes of it.

Regards.

I've noticed over the past day or so some yahoo is posting political junk.

This is supposed to be about scanners.

If this dude is that worried about George Dubya, can he not take it to a Republican newsgroup,
or to a Democratic Party one?

BTW: Pleeez don't take the name of this newsgroup seriously in its phonetic form:

"wreck radio scanner".

There's lot of us still learning about them (I for one never leave on a drive longer than 2 miles without my
trusty BC245XLT or BC780XLT).

PK

I would have to guess you are of the younger set. A review of history shows in the last century, no country on the planet earth gave more to France than the US. France has not shown its appreciation for the effort.

Your free speech is only guarenteed thru the efforts of those who came before us. Had the US not entered WWII, things would be very different now and am certain you would not be able to say what you do. Those of us that have served know the true meaning of freedom, those that have not only have an idea of what it really is about.

Bob

Well then, can one of your super internet users trace the source and start reporting this stuff to his ISP? I know all I have to do is ignore the posts I don't want to read, but it would be nice not to even see the BS titles listed as new messages...

I think you may be right.

I played with it last night for four hours and I don't think I know any
more about now then I did when I started.
I talked with the nerd that wrote it last month and I'm still trying to
figure out what the hell he was talking about.

Some body told me about some software that I can down load that runs
well, maybe they will write back about it. WinScan 2.10 doesn't do much!!

Why on earth would anybody still be using equipment that old?

Those "portables" are huge by todays standards. They probably show
the wear of years of being in service, and even if they've been
sitting on the shelf for twenty years, the components inside were
manufactured so long ago that you're bound to be constantly replacing
dried up capacitors and other decaying parts.

Please tell me you're not using them in any situation where the safety
of human beings could be jeopardized by their failure to function.

Fuck you troll. Sharon is part of a democracy trying to
eliminate a terrorism problem. If I were him I'd cut the
throat of every Palestinian terrorist I could find. They
are a bunch of cowards full of self pity.
Actually, I can't wait until there is a Pale. state. An insignificant
piece of land where they can cry all to themselves. The first
time one of those shits tries another homicidal bombing, Israel
can officially declare war on another on them because they would
be another country. And THEN you're going to see some serious
Arab blood flow. I CAN'T WAIT!
That's a war I might volunteer to fight in.

The new Nevada Highway Patrol radio system, which has already cost more than $15 million, will probably have to be scrapped.

NHP Col. Dave Hosmer said Monday the system has been either in planning or under construction for more than 10 years. It was to be a state-of-the-art system to help troopers communicate with both their dispatch centers and local authorities statewide.

I'm glad to see they've decided to junk the system after only spending
$15 Million. I believe both Miami, FL and Delaware junked their new
systems (or at least major parts of them) after spending around $25 Million.

Have you read about the Kern County (where I live) system? It's analog and is suppose to be one of the best systems in the U.S.

I am going to setup a file for San Bernardino County (the next county and where I work) and LA County then I can load them when I go south and also use the 245 here as a trunker.

Good Enough Gay Parents

By Jeff Lutes, MS, LPC

A few years ago, I told some of my male friends that my partner and I were considering adoption. I was caught off guard when they looked at me like I had a third eye in the middle of my forehead. That experience taught me that many gay men had never seriously considered parenting as an option. But now that's changing.

Current estimates suggest that as many as 10 million children in our country live with 3 million gay or lesbian parents, and the numbers are growing. Historically, most gay men and lesbian woman have raised children conceived during a previous heterosexual marriage. Now, many of us are creating families through adoption, insemination, surrogate parenting, or by becoming foster parents.

In recent years, I've noticed that more of my clients are exploring their maternal and paternal instincts. What seems really new is the growing number of men who are starting families together, or who are actively planning to do so in the future.

In considering this prospect, most gays and lesbians have to work through the culturally conveyed belief that we are not fit to be good parents. Relax. Dozens of studies in the fields of psychology, psychiatry, sociology, anthropology, and medicine have shown that children raised by same-sex parents are just as psychologically well-adjusted as those raised by heterosexual parents. The empirical evidence is overwhelmingly strong; those who are interested can go to www.apa.org for a thorough summary of the research by the American Psychological Association.

Most adults, gay or straight, have fears about their ability to be good parents. That's normal. To not have some fears would mean you were obtuse. But luckily, most of these fears turn out to be overblown or completely unfounded. The truth is that once you are a parent, you will most likely rise to the occasion and do what needs to be done to raise your children into reasonably healthy adults. Will you make mistakes? Absolutely. A straight friend of mine recently told me that he started a college fund when his daughter was born. Now that she's entering adolescence, he's thinking about opening a therapy fund!

Gay and lesbian couples can be just as caring and nurturing with their children as heterosexual parents (or just as dysfunctional). What matters most, of course, is how well we are able to help our children feel loved

and understood. D.W. Winnicott, an influential psychoanalyst, wrote that children become happy and healthy adults when they have "good-enough" parents. His message is that we don't have to be (and can't be) perfect parents; we just need to provide a safe and reasonably stable environment in which the child feels loved, cared for, and valued. This is an important point because gay dads and lesbian moms sometimes try to be "super-parents" in order to prove themselves to those who oppose gay parenting or to compensate for the ostracism a child might face for having a different family structure. I admit, as a father and a therapist, I sometimes worry that every mistake I make will scar my son for life. Then I remind myself that I only need to be "good-enough".

We may worry that our children will be harmed by being teased and ridiculed because they have two mommies, or two daddies. While it's true that they may face some prejudice, it's also true that they will probably have the tools to deal with it. Our kids will learn a lot about society's ignorance and bias, but if we are emotionally present and listening compassionately, such trials can build strength of character and teach tolerance and sensitivity toward others. Remember that all kids get teased about something at some point. We can't protect our children from everything or prevent every negative experience. Nor should we. There is value in both diversity and adversity. No parent is capable of meeting a child's every need. But, when parents feel proud and secure, this gets relayed to the child and gives him or her the strength to handle other people's response to their nontraditional family.

We may worry about the impact children will have on the adult relationship with our partner. Well, I guarantee that your relationship will change when you become a parent. I have been asked if parenting strains or strengthens my relationship with my partner. My answer is both. Having a child has forced us to deal with some challenging issues in our relationship and the daily grind of parenting can be totally exhausting and extremely stressful. On the other hand, I frequently catch myself admiring my partner as he takes advantage of a "teaching moment" with our son. In these moments, I experience a beautiful part of my partner that I might not otherwise get to see. Watching him love our son opens up new and joyful parts of me, and I fall deeper in love with both of them.

The decision about whether or not to parent a child is perhaps the most important choice a person will make in his or her lifetime. Not all of us want to be parents and that's all right. Choosing to parent does not make a person more virtuous or noble, and choosing not to parent does not make a person self-absorbed or puerile. It's just a choice you make for a different kind of life, if you desire it, and have the personality and resources to do it. Of course, it is vital that you spend a lot of time evaluating your suitability as a parent. Talk to your partner, your friends, your family, and consult with a therapist. Take a parenting class, read books, educate yourself on-line, or join a support group. Be honest with yourself about whether or not you have the time, finances, and emotional resources to start a family. Perhaps the most important consideration is whether or not you love who you are as a person, because

you can't give a child something you don't have yourself.

Interestingly, this long process of exploration and planning is one of the strengths about gay and lesbian parenting. We rarely have an accidental "Oops, I'm pregnant!" experience. If we do all the research, soul searching, and hurdle jumping that it takes to have a child, we can be pretty sure that our little one will be cherished, loved, and adored. Good luck!

How to Fight (and how not to...)

By Sue Marriott, LMSW-ACP, CGP

"What is this By George bill showing up on our credit card?" you politely ask between bared teeth.

"Don't even start your nagging," the love of your life snaps with a sarcastic smile.

Wow, a simple question and suddenly you are off and running on a familiar refrain of conflict in your relationship. He knows his spending bothers you, yet he continues to do it! You know he hates feeling controlled but you continue to do it! What's going on here?

If this sounds familiar, you are not alone.Here, we address the urgent matter of how to avoid pissing off your partner and what to do once you are already in the dog house.

- --
- -----
Last last month the LA Times reported on a new 12-year study of gay and lesbian couples by John Gottman. According to this research, same-sex couples are less belligerent, less domineering, less whiney, and are more affectionate, humorous and express more joy than heterosexual couples.

However, no matter how great you and your lover have it, there is sure to be conflict in your relationship. After all, who knows better how to push your buttons? While the degree and frequency varies quite a bit by couple, conflict is a normal, healthy part of any intimate relationship. The more you know how to do it productively, the better off you each will be when the dreaded but often passionate circumstance arises again.

Even in full-fledged war there are such things as rules of conduct, so why not protect the one you love from your "friendly fire"? Before some suggested fair fighting guidelines, however, let's talk about ways to prevent a fight, which is a heck of a lot easier than managing things once you both have fangs bared.

The single most effective way to avoid making your partner snarl is to begin a potentially difficult discussion more gently. Guaranteed, if you start off by criticizing your partner (or worse), things are probably going to end up badly as well. Conversely, if you can slow things down and be

gentle in your approach, you are much more likely to end up in a creative, problem-solving place rather than an argument.

Going back to the above example, a better start would sound something like, "Say Hon, I've noticed that you've stopped using the Visa so much and I appreciate that. This By George bill bothers me though, because we agreed not to charge anything over $100 without talking to each other first. What happened?"

This is not intended to avoid conflict, clearly there is some, but it is more likely to decrease defensiveness and start a productive discussion about the issue at hand.

As the person on the receiving end of the start of a discussion, it is your job to listen for what sounds reasonable in your lover's request. In this case, no matter how great the thing you bought at By George looks, or what your lover just bought on the Visa, it is reasonable for your partner to hold you accountable for your agreements with each other. Focus on just that and you will do your part in continuing a productive problem-solving discussion. You can get to other issues if they are still important later.

Fair fighting guidelines:

o The over-advised but still a good idea: use I statements. (Not "I think you are stupid," more like "I feel hurt when you don't kiss me back when there are people around.")

o Stick to one issue at a time; this is not a good time to start listing her many shortcomings and failures

o Focus on specific, changeable behaviors and don't generalize to character issues ("I wish you would empty the dishwasher more often" rather than, "You never do anything - I wish you weren't so lazy.")

o Be open to your partners' efforts at making things better (the joke he cracked after he turns you down for sex really may have been an effort at reconnection)

o Take time out only after agreeing on when you will get back to each other

o Follow through on the above

o Let your partner influence you

o Work on repairing any injuries afterwards

More important than using these specific guidelines is making an agreement with your partner about what you each expect when you are in conflict and then sticking to it. I'd recommend setting as high of expectations as is realistic for you, though. Some research indicates that unions thrive when the couple won't put up with much junk from each other. And no, it's never too late to tighten up your agreements with one another.

The main idea to walk away with is to have a strong friendship with your partner, nurture it generously and often, and then when you do get angry

with one another, protect the respect that you already have for each other.

The Intimacy Two-Step

By Sue Marriott, LMSW-ACP, CGP

You haven't seen your partner Jack in way too long and you have resisted complaining. Your mind is filled with various scenarios about what he may be doing without you and none of this visual scenery is comforting. You finally just ask to talk to him when you see him next. You get the blank stare you dread and then, slowly, with obvious reluctance, he agrees to hear you talk.

Or maybe you're on the other side of this two-step. You have had a perfectly fine afternoon at work until, right as you walk in the door, you hear your least favorite phrase from your lover Roderick.

"We have to talk."

The world stands still for a split second as your mind goes blank but your body goes into super-alert, danger-on-the-horizon mode. "Why can't he just be okay? God, do we have to talk about everything?" You have already told him you love him and, dammit, you'll let him know if the status changes. What more could he possibly want from you?

"Uh, sure," you mutter, checking your watch.

In couples' relationship literature, it's called the pursuer-distancer dynamic. You may recognize it as the intimacy dance on a good day, the Coyote and Roadrunner cartoon on a bad one. In all long-term relationships there is some degree of one person initiating contact and closeness more often than the other. In the best of all worlds, these roles shift intermittently and the chaser becomes the pursued (usually when they wise up and stop chasing) and vice versa.

With whom do you identify the most: the forever longing but never quite capturing their raison d'etre Coyote, or the ever-elusive Roadrunner, whose "Beep!" only entices us not to give up the chase?

This swing from pursuer to distancer is part of life from the beginning. A relational map is laid down early in life based on a variety of factors including temperament and the ways your early efforts at connecting were responded to by your caregivers. Remember that the very first lesson in life is trust, and from there you make all kinds of assumptions about how safe the world is, how safe people are and how much closeness or distance is optimal for you. If your lover feels too far away you seek contact; too close and you pull away to regain relational equilibrium.

So let's return to Jack and Roderick. What do you suppose is really going on in this scenario? A reader with a more anxious style of attachment might identify most with Jack and guess that Roderick is having an affair

or doing something else harmful to the relationship. An avoidantly-attached reader may identify most with Roderick and guess that Jack is just insecure and needy and should just get a life. A securely attached reader might guess that it's just a bump in the road of a good relationship that will get worked out now that they are going to talk about it. We will go into the different types of attachment styles and help you identify yours in a later column, but first things first - how to get the Roadrunner to slow down and the Coyote to stop blowing himself up.
Remember that the purpose of the pursuer/distancer chase is to maintain a certain level of distance and closeness in the relationship. As noted, if the chaser stops, most often the distancer will stop; and if the chaser retreats, the distancer will turn around and pursue, thus keeping the same amount of distance between each of you at all times. But this seesaw effect can be crazy making.
So how does one calm this pendulum swing and attain a comfortable level of intimacy? The goal is to strive toward attachment security.

For the Coyote:
If you are most often the pursuer of closeness, your job is to stop chasing so your significant other can have enough room to feel their desire for you without feeling smothered. Manage the anxiety that gets stirred up when you feel your partner drifting away by keeping the focus on yourself. Hang out with your friends if you still have any, and win them back if you've let them go since you settled down with your partner. Don't wait for anyone else to fill you up; it's your right and your responsibility to take care of yourself. Get a hobby, take a class, work out on your own or with friends, get support from someone other than your boyfriend or girlfriend. In other words, take the focus off of the Roadrunner and reassure yourself that your relationship is fine. Rather than mind reading, trust that if there is a problem, your partner will talk to you about it.

For the Roadrunner:
If you tend to be the one who most often feels crowded, you can help your partner back off by giving him or her a little more of you. The more you can put into words what you need the better. Saying that you need more space to recharge and that you will return is a much better way of alleviating your lover's anxiety. This will allow him or her to stop the pursuit and is a more effective way to get what you need than taking your space by disappearing in some form or fashion.
Your partner is doing you a favor by attending to the relationship - honor that and don't take him or her for granted. The Coyote won't chase you forever. I've advised the pursuer to back off and focus more on themselves, and to you I say to focus more on them. It's okay to have space away, but it is also okay to feel your closeness and need for your partner. Even though these modes of relating can feel hard-wired in our cells, it is possible to change them. I also know it's a lot easier said than done. Believe me (beep beep).

Jealousy: Shadow of Love or Green'Eyed Monster?
How much jealousy is "normal?" As it turns out, the answer is somewhere between "none" and "a lot".
By David A. Jones, Ph.D.

"Late at night, I found myself driving by the house we had shared. When I saw that little SUV parked in his driveway, I knew it belonged to his new boyfriend. My insides just turned to fire. I sat there in my car, staring at the light coming through the upstairs window of the house for what seemed like hours. I said to myself 'I know I'm a fairly well-balanced adult. What is happening to me? Have I completely lost my mind? I should be able to start my car and drive home now.' But I continued to sit there, hypnotized by that light. The lights finally went out, and I drove home, shaking. I had never felt so crazy."

"I knew our relationship was over, but I still had very strong feelings for her. Then, one day I saw her at the vet's where we used to take our animals when we lived together. She was with this totally lipsticked-out blond, the kind who spends hours picking out the right jeans, every hair on her head in just the right place - with our dogs. I knew that I looked like an absolute mess - red nose from allergies, the extra ten pounds I had gained since the breakup, laundry-day clothes. I think I just lost it - I walked up to her, punched her, and ran outside and fell on the pavement, sobbing uncontrollably. I felt like I was going mad."

What do these two people have in common? They are both experiencing the feeling of romantic jealousy. And what do they have in common with the rest of us? More than we might like to admit! If these two examples seem extreme to you, does that mean you're somehow free from this feeling that Shakespeare called "the green-eyed monster"? Probably not. Most people experience feelings of jealousy, even intense jealousy, at some point in their lives.

If you ask a hundred people, "What is romantic jealousy?" it's likely that you'll get close to that number of different definitions. What does it mean to you? Ayala Pines, in her book Romantic Jealousy, defines it as "a complex reaction to a perceived threat to a valued relationship or to its quality." The complexity stems from the fact that a jealous reaction may involve a constellation of internal feelings including fear, anger, sadness, humiliation, and grief. It may also include thoughts of resentment, self-blame, self-pity, and fantasies of revenge. Physically, we may have a churning stomach, feel faint, and have trembling, sweaty hands with a racing heartbeat. Romantic jealousy has an external component too.

Depending on its intensity, we may deny it, talk about it, scream about it, cry it out, or use humor. At the extreme, we may retaliate and get violent with the object of our jealousy.

If we note that Pines' definition specifically mentions "perceived threat" as the trigger for a jealous response, it becomes clear that the threat may be real or imagined. If we think that our partner is interested in other people, even if the threat is just a result of our wild imaginations, we are likely to respond with jealousy. On the other hand, if we feel secure in ourselves and in our relationship, we are unlikely to feel threatened and therefore unlikely to have a jealous response. However, most of us don't live our lives in imaginations running amok or in completely secure contentment. Most of the time, we're somewhere in the middle ground.

For many people, the strongest component of jealousy is a fear of abandonment ("She'll fall for that other woman and then I'll be all alone in the world....") which has its roots in early childhood experiences. For others, the more painful component is betrayal ("How could he, my best friend and the man I trusted more than anyone else in the world, lie to me like this?") or humiliation ("How dare you embarrass me in front of our friends by flirting with that slut?"). Still others experience jealousy as a form of competitiveness ("He fell in love with that guy? He must be a better lover than I am....").

Usually, jealous feelings cause us to overestimate the actual threat present in a given situation. Thus, while we may experience our partner's "scandalous" flirting at a party as an indication that they are about to leave us, in reality all that happens may be a temporary experience of embarrassment.

So, what does it mean if you and/or your partner experience feelings of romantic jealousy from time to time? For one thing, we know that in order for a relationship to trigger a jealous response, it must be valuable. So, if you're feeling jealous, at least we know you value your relationship. The question is, how much jealousy is "normal?" As it turns out, the answer is somewhere between "none" and "a lot".

People who claim to never have a jealous feeling or thought are likely to be somehow cut-off from important parts of themselves. Imagine for a moment someone who, upon hearing from their partner that they have fallen in love with someone else, enthusiastically exclaims "How wonderful for you, Sweetie!" Most of us just wouldn't think that person was quite "normal."

At the same time, if romantic jealousy is becoming a debilitating force in your relationship, or if you find yourself acting in ways that make you feel out of control, it may be time to ask for help. Couple therapists can often help partners find a way to address the roots of their extreme jealousy and learn ways to more effectively cope with the complexities of love. However, if you and your partner only experience mild jealousy from time to time, pat yourselves on the back for having a valuable relationship that is strong enough to contain all kinds of feelings and experiences, even the complex ones!

Dinner With My Elders
By Jeff Lutes, MS, LPC

Last Saturday was one of those magical days I will not soon forget. I met my elders. I'm not talking about my grandparents... well, actually I am. Let me explain.

You see, in the past several weeks I have been producing a short video about the diversity of relationships and families within our community. The video (which will be shown at the Metropolitan Community Church of Austin during services on April 21) is a collage of images set to music that captures just about every possible kind of family; male couples, female couples, lesbian and gay families with kids, straight families, and single parent families.

Last Saturday, while on my way to film another couple, a man approached my car as I waited for the light to change at a busy intersection. Turns out the man was passing out free soft drinks and inviting people to attend his church on Easter Sunday. Attached to the can of Coke was a small card with pictures of traditional, straight, white families and the words "Find what you've been looking for this Easter". As the light changed, my eyes filled with tears. I couldn't find anything even close to my family on that card.

Which is really odd because I just have your average gay-deaf-Jewish-Baptist-Chinese family.

Anyway, I guess I just thought it was sad that most churches still seem to be so uncomfortable with diversity and inclusivity. But, I picked up speed and grinned through my tears all the way to the next light. I realized how lucky I am to have my nontraditional family, and I felt incredibly blessed to be a part of a church family that embraces all God's children.

Later that night, I found myself eating dinner with three gay couples. The "youngest" couple has been together 19 years. The second couple 39 years. And then there were my grandparents. Not my parent's parents, but my new gay granddaddies.

They are getting ready to celebrate their 53rd anniversary.

Before dinner, I visited the lovely home where they have created years of memories together. I sat in their 1970s living room and watched in awe as they treated each other with patience, gentleness, and kindness. They told wonderful stories about things that happened before I was even born. They talked about how they met in 1948 (I did some quick mental math and

realized my parents were six years old when these two men got together). As I filmed, the three couples shared that staying together has not always been easy. They said it takes hard work, dedication, and tenacity. One of the elders (the other men call him "granny") smiled at his partner fondly and said he would gladly do it all over again, because in the end, it was worth it. His partner was not comfortable being in front of the camera. He said he's only in his seventies and doesn't plan on coming out to the world until he's 90!

At the restaurant, one elder pulled out a chair for his partner, and pushed him gently to the table (while I made a mental note to be more of a gentleman toward mine). As we were leaving, one of the men stopped to admire a plant in the restaurant lobby. He touched the leaves softly to see if they were real. An elderly woman passing by said, " I thought only ladies did that!" We giggled. If only she knew.

There was a time in American history when the older generation was admired, respected, and honored. We used to go to our elders for words of wisdom. We looked up to them and understood that their life experiences served as powerful sources of knowledge and sound advice. They were our role-models; astute men and women who could guide us and show us the way.

It seems that in more modern times our culture has become obsessed with youth and physical beauty. Too often we treat our elders with disregard and disrespect. They become invisible because we don't want to see them. We would rather not be reminded that, we too, will get older.

What a shame. We are missing out on so much.

Some heroes run to save others from an imploding New York skyscraper. Some heroes just sit in their avocado green recliner and love their partner for more than half a century, despite all the societal pressures that would try to tear them apart.

I couldn't help but wonder how much better the world might be if every church had a picture of this couple on their Easter invitation. Maybe these two aging gay "grannies" could help prevent a straight couple from becoming part of our country's 50 percent divorce rate. Maybe they could help a young gay couple figure out the meaning of true commitment. If only we were more open to hearing their voices.

The next day was my fortieth birthday. I thanked God for the many blessings in my life so far, and prayed for the courage to live my next 40 years with as much grace and humility as I had witnessed on Saturday.

The Keys to Understanding and Preventing Affairs
By Sue Marriott LMSW-ACP, CGP

How vulnerable are you to having an affair? Put yourself in Mark's shoes.

Mark is incredibly attracted to Bill, who is Mark's long-term partner's friend. Mark feels noticed by Bill, and Bill is enthusiastic towards Mark's so far clumsy efforts to learn photography. Mark's partner Roderick is busy with a new job and trusts Mark and Bill to spend whatever time together they wish.

Whether or not Mark will end up in an affair with Bill is relatively predictable depending on one critical factor that only he controls: honesty.

Whatever your sexual agreement with your partner, e.g. monogamy, monogamy with agreed upon exceptions, etc., there are agreed upon limitations that take each partner into consideration. Couples that make it are those that keep the number one rule in mind - the rule of honesty. Duh, everybody says honesty is important in relationships, but if you are truly honest with yourself, you know you are not always honest. So how can this prevent an affair?

Actually, we are wired to have affairs. Human beings are one of only a few animal species that attempt to mate for life. We are designed to be attracted to people who meet our needs, and we naturally bond with people who show us attention and care. However these very human tendencies need not turn us into beasts in our closest relationships.

Contrary to popular opinion, affairs are most often borne out of simple loneliness. One-night stands are a different animal that often involve strangers and alcohol and are very short lived; they have their own dangers. Affairs, on the other hand, are generally much more toxic to a committed partnership. They usually involve a friend or co-worker or someone else already in your life. You "innocently" make a much-needed emotional connection with an available, kind person. Spark!

Most people who have had affairs say that the sex usually comes later, after the conversation and affection. And because the emotional connection can be strong, the sex is often great. The set-up to think, "Ah ha, this is true love and I've married the wrong person." Funny how you don't rush home to tell your current partner so you can correct the mistake and get on to

life with your true soul mate.

You see, it doesn't make practical sense to break up just because you are not getting the attention you think you deserve. Affairs are about peeling off an as-yet unmet need and trying to meet it (secretly, usually) outside the marriage. It is rare that you actually leave the partnership to be with the person with whom you are having the affair precisely because you know at some level that this other person is also not capable of meeting all your needs, either. The "solution" is to try to have both.

It's easy to fantasize and get delusional about this new absent lover - you are filled with the love drug again, your contact with each other is limited and secret, and danger spikes passion. You don't have to fight over who shrunk your shirt in the laundry or the piles of paper they stack up on the kitchen table. You unknowingly fill in the blanks of what you don't know about each other with your fantasy of what you hope.

Then, at home you have cut yourself off even more from your partner, and (s)he is probably aware at some level that something is amiss. If left unchecked, the drift continues and you eventually separate to "take some time apart" while usually denying and covering up the affair.

When it does eventually comes out, you then have a double betrayal to deal with - the affair itself and no less importantly, the lies and deception leading up to discovery. For many relationships, this would be a fatal blow to your long-term partnership. And if whatever caused the affair to begin with doesn't get addressed, you may well end up with the scenario again given some time for it to repeat itself with the new lover.

The good news is that most marriages do survive affairs. But the best defense against such a painful strain is a good offense - prevent any potential affairs from ever taking hold by dealing honestly with what you are feeling.

Let's go back to Mark and Roderick. Mark is aware of the danger of these feelings if kept secret, so he tells Roderick (not Bill!) about his attraction to Bill. This is painful but not nearly so as an affair, and it brings the attention right back where it needs to be - on the distance in Mark and Roderick's relationship. Mark let's Roderick know he's been missing him since he got that new job, and that he feels more distant and less alive in the relationship now than ever before. Roderick is shocked and angry, but with time and care he comes to realize that in fact he got lost in his job partially to please Mark. He wanted to take care of him financially and to appear important and powerful in their relationship. He did not realize that Mark needed his attention, not just his paycheck, and this revelation opened the door for more intimacy in their relationship.

The fantasy of what Bill had to offer is the projection of what was missing between Mark and Roderick that needed reworking. Roderick gets a chance to get closer to his partner and this process often leads to the dissolution of the attraction to Bill. If the attraction does not wane, Mark should reduce contact with Bill or it may even be necessary to even cut off his

friendship with Bill in order to protect his long-term committed partnership.

Whatever else happens Mark should never, ever, ever talk to Bill about his feelings for him, or about the problems in Mark and Roderick's relationship. Mark should turn to other safe people to discuss these matters and get support in working on the problems in his long-term relationship with Roderick.

The feeling of romantic love is so powerful it can ruin reputations, careers and families. Mark should not listen to this fickle emotion, but his long-term friends and trusted others to help him through this. Mark may eventually choose to leave Roderick, but by finishing one thing before starting the next he has given the next relationship a much better chance of actually making it. And in the meantime, chances are Mark would have actually revived passion and aliveness to the mature, enduring love he shares with Roderick.

Past the Honeymoon Stage
By Sunny Lansdale, PhD, LPC

Most of us have experienced that heady, erotic, adrenaline driven experience called falling in love. Some of us have enjoyed it once or twice, and others have been there too many times to count. Regardless of the frequency of this sweet ride, most consider it wonderful. We sing, smile a lot, fantasize endlessly about our next encounter with Mr. or Ms Right, usually lose weight because we're not getting enough sleep, and dare to dream that this could be the one. This period is called the Honeymoon Stage of the relationship and, unfortunately, as sweet as it is, it cannot last. No one can sustain the full intensity of such an experience over time. As the honeymoon is winding down or coming to a screeching halt depending upon the styles of the participants, some decide they've fallen out of love and are off to find another wild ride. For others, the change is the signal that they've entered into the second stage of relationship.

I have heard people say they could almost hear the click when they went from one stage to another. That sweet woman whom they couldn't keep their eyes off of suddenly begins to sound like Mom, or that mesmerizing hunk of burning love becomes the other side of an old familiar power struggle. There are lots of different labels for this second stage contingent upon the various struggles announcing its arrival. Some examples follow:

1) The Power Struggle Stage - Every couple has to address issues of power and control. Who is in power? Who makes the decisions? How is the power distributed in the relationship? Sometimes an abrupt change in the distribution of power proclaims the end of the honeymoon stage.

2) The Fighting Stage - All couples experience disagreements and anger. The key is how do they solve disagreements or manage anger? Often the first real fight moves a couple to the second stage of relationship. Sometimes the second stage is primarily characterized by disagreements and fighting.

3) The Disillusionment Stage - You are not who I thought you were. My dreams are not going to be realized. Did I create an illusion and fall in love with it? Every relationship has a certain degree of illusion making and subsequent disillusionment announcing the end of the honeymoon. Typically, this is known as falling off the pedestal.

4) The Transference Stage - Issues from our past relationships affect the quality of our present relationship especially if there are unaddressed

issues of trauma or abuse. The truth is we all bring our issues from the past into our relationships and the more important someone is to us the more likely we are to bring those issues to life. For example, if our new found love is having a moment of reverie gazing thoughtfully out of the window and we interpret that behavior as hostile withdrawal reminiscent of our stepmother's treatment of us when we were a child, chances are we experiencing transference. Essentially, when our past begins to distort the reality of our present relationship, we are well into the second stage.

5) The Working Stage - Whether the second stage of a relationship is characterized by one or all of the above examples, it requires some effort to manage the issues that have surfaced. It does not mean that the fun is over. It does mean that the relationship has moved to a new level; and if the fun is going to continue, these issues need to be faced.

It is tempting to treat the end of the honeymoon stage as a bad thing. Actually just the opposite is true. If the relationship is to grow and deepen, it has to move beyond the first stage, as exciting and wonderful as it is, into the growing pains of the second stage.

The bottom line is, the second stage is about our own personal growth. We have to face the ghosts of our old pathological patterns and disfunctional defenses if we are going to sustain the relationship. Now isn't that great news! We find the partner of our dreams and then discover that if we are going to ride off into the sunset with our find, we have to develop some self awareness and probably address some old unfinished business. Not surprisingly for many of us, it is just too much trouble. We would rather hop from honeymoon to honeymoon, relishing the early stage and taking our leave when the work begins.

Of course, the same process is going on with our partner. About the same time we are being triggered by some perceived irritating imperfection in our prince and/or princess, chances are they are being driven up the wall by something in ourselves which we deem to be innocent or misunderstood. Not only are our old ghosts surfacing, they are consorting with the ghosts of our partner. The ensuing dance can be both provocative and painful.

Unfortunately, the dance or pattern can also be familiar. It has not missed the attention of those who study relationships that we often ingeniously and unconsciously choose potential partners with issues that provoke our own and vice-versa. This appears to be driven by a need for psychic repair. Unfortunately, it also appears that we can repeat the pattern over and over again with partner after partner until we finally get it - or not. The optimistic perspective is that this new relationship is opportunity for growth. The spiritual perspective is that it is no accident that this very person has come into our lives.

So the second stage of relationship is about both parties attempting to learn how to live with another human being in a way that promotes their own and their partner's healing and personal growth. Sounds kind of intimidating doesn't it? Here you are thinking you are just enjoying the titillating excitement of the honeymoon stage and you might be about to

embark on a transformative experience for both parties. Attempting to navigate this second stage is challenging to say the least. Sometimes the participants discover that there is not a sufficient match to support or sustain the growth of both parties; sometimes they discover the level of commitment and hard work it requires is beyond their willingness or skill; and sometimes they discover they need the help of a professional to assist them through unknown and possibly frightening territory.

This is probably the best place to correct a possible misunderstanding. Talking about all this work gives the impression that we have no choice but to abandon the euphoria of the honeymoon stage for the salt mines of the second stage where we are doomed to slave away masochistically pursuing an illusive process that takes an indeterminate amount of time for questionable results. If true, it would make sense to bolt the second the honeymoon begins to wane. Realistically, the second stage does involve work, but if it is not balanced by growing satisfactions, a generous helping of delight, and occasional moments of bliss, it would make sense to question continued participation.

This brings us to the third stage of relationship, called the practicing stage, which involves putting to use all the things that have been learned in the second stage. It is important to point out that this process is not strictly linear. The third stage does not happen all at once; it gradually emerges as we grow through the second stage. Also, life is always is serving us new challenges and we, individually or in tandem with our partner, are routinely called upon to revisit the second working stage. However, each experience builds upon the last and gets easier as we practice.

Ideally, the third stage is the place where a new kind of love can be experienced which makes the honeymoon version pale by comparison. It is a love that is capable of revisiting the pleasure and excitement of that honeymoon experience but is not primarily defined by that excitement. This love comes from a part of us that lay dormant before we began the task of self discovery that being in a working relationship demands. It is a love born of the mutual risk of vulnerability and the creation of ever deepening more intimate connections with our partner.

Most of us, in the course of our lives, make several attempts at getting this relationship thing down and have had our false starts, agonizing disappointments, and necessary but unpleasant learning experiences. We might even see the rationale behind hopping from honeymoon to honeymoon expecting little else. Then again, maybe if we understand the process and the potential reward, we will be able to not only savor the honeymoon stage but all that lies beyond as well.

The Rules of Anger in Relationships
By Sunny Lansdale PhD, LPC

Your temperature goes up, face flushes, jaw sets, heart pounds, and muscles tense.

Instantaneously your whole body goes into attack mode with images that could make a schoolgirl cringe flashing across your brain. Communication deteriorates into a screaming match and unkind accusations. Whoa! What's happening? Could it be that a button's been punched and your adrenaline has you launched into aggressive overdrive? Then after a dramatic display of flash and fire, do you return to normal with the appropriate display of remorse and apology?

Or maybe the way you experience anger is not flash and fire but the slow burn which simmers and builds over time and then explodes like Mt Vesuvious requiring a long time to cool down with hot pockets of lava hidden underground to be reprieved when needed. What happens when two of the first type are in relationship? Or the second type? What is your individual anger profile? What is the anger motif of your relationship? Does it escalate into the tragedy of violence and its shame filled aftermath or steep in hostile silence and passive aggressive distance, which spells death to passion.

Before considering such questions, it might help to explore some thoughts about the nature of anger, and the role anger can play in your relationship.

To rationally address this issue, it is important to understand the role of anger in human experience. Out of control displays of anger justifiably get very bad press in our culture. Unfortunately, the personal experience of anger itself often falls prey to this same judgment. In reality, anger is just another human emotion like sorrow, joy, or fear. It is not good or bad, it just is. Essentially, it gives us information and provides us with energy.

Some believe that if we did not have anger, we would be very vulnerable in the world. Consider our forefather hunting in the forest for food and suddenly a hairy hungry flesh eating predator leaps into his path. Grampa had a choice - to fight, to flee, or to freeze.

All of these options required adrenaline. Essentially, we get a surge of adrenaline any time we perceive that we are about to be violated and that surge is often identified as anger.

Now, consider if that hairy beast wasn't after Grandpa but ran off with Grandpa's hard won dinner, which had been roasting over the fire. Grandpa would be frustrated because something he needed was denied him and that frustration could also be experienced as anger, at himself, at the beast, or at his misfortune.

In today's world, it is not the beast in the woods which violates us or thwarts our needs. It can be the 18-wheeler that cuts us off on the highway, or the line at the bank which prevents us from getting our check deposited, or the significant other who forgets our anniversary. Often it is not one of these adrenaline producing events but several that cluster within our daily context that present us with the challenge of containing and managing a lot of frustration. Unfortunately, our culture does not do a very good job of teaching us how to meet this challenge. We often attempt to manage our frustration by blaming ourselves and beating ourselves up which is a short steep path to depression. Or we target others, especially our most significant other, with angry outbursts costly to everyone.

Another factor which contributes heavily to our anger motif is our past.

Sometimes an apparently benign act touches off a trigger which taps into old unfinished business. Before we know it we are riding an old angry train which has ten percent to do with the present and ninety percent to do with the past. In fact, anger which is inappropriate and disproportionate is almost always about the past. Unfortunately, it does not feel that way at the time. Research on how the brain processes and integrates information indicates that when we have an experience which triggers old unfinished emotional business, access to our frontal lobes where we do our rational thinking is reduced. Great! At the very moment we most need to be able to understand, contain and process our response, we are least able to do it.

Essentially, we often do a piece of emotional time travel where it feels like we are back in the past fighting the old battle with all the intensity that battle demanded when the truth about the present is that it may bear only a slight resemblance to that original event.

So what does all of this have to do with anger in relationships? First, it is important to normalize and depathologize your experience of anger if you want to manage it. The issue is not whether or not you experience anger, that is a given. The issue is how you act upon your anger; that is where the potential destruction exists. I often think of anger as a massive Doberman pincher that you own whether you want it or not. If you respect and take care of it, understand what drives it, learn to control and manage it, you have a protector and a friend for life. If you neglect it, cage it in, pretend it isn't there, underestimate or deny its power, it can break out and go for your throat or the throat of your partner. By the way, don't forget, your partner has a massive Doberman as well.

Anger in relationships can be expressed in numerous ways. The positive way is to perceive anger as the red flag which highlights the problem to be solved and to use the energy anger generates to set about finding an appropriate solution. Much easier said than done. Because anger is an intense physiological experience and because we are not taught to use our

anger in a positive way, we can easily respond to our anger destructively. Here are two examples.

Passive Anger

This is anger that goes underground. Instead of being expressed directly so the issue can be defined and a possible solution created, passive anger resides beneath the surface. It can wait, sometimes for years, hidden beneath a cool exterior behind smiling disclaimers of "Nothing's wrong" or "I'm O. K." only to surface in passive aggressive behavior, physical symptoms, or the toxic veil of distant silence. Sometimes the underground anger reaches mammoth proportions difficult to contain and susceptible to some insignificant incident which ignites the volcanic action described above. This explosion can surprise everyone even the individual who exploded. It seldom correctly defines the issue much less creates an appropriate solution. Suppressed anger can also make us quite sick. Medical research has found a significant connection between "nice" people who never get angry and some not so nice diseases. This is the ultimate price for anger turned inward. Unfortunately, the passive approach to anger is the one sanctioned by society for many of its members. It is typically considered socially inappropriate for women to be angry thus numerous women have learned to deny or to avoid any experience approaching anger. It is not unusual for many women and men as well to get sick or depressed before they realize they are really pissed off and have been for a long time. Relating to passivity is like trying to grab smoke. You know it's there but you can't really pin it down. Imagine the numerous issues produced when two passive people attempt to have a relationship. Both people know something's wrong but no one has a clue what it is. The far more prevalent pattern is the passive person involved with the dominant, sometimes overbearing individual.

Escalation to Violence

At the opposite extreme from passivity is the angry response gone over the edge, the aggressive impulse violently acted out on some unfortunate target; often the target is a significant other. This violence can be physical, emotional or verbal. In addition to being totally unacceptable, this pattern is a tragedy for everyone. This topic deserves more attention than there is room for here but several issues need to be noted. Unlike the passive individual, the violent person has limited capacity to contain their anger or frustration and little or no impulse control. The critical question is why? Is it because that individual doesn't care about the damage they do? Is it because violent power plays are condoned by their family or their culture? Or is it because they don't yet have the skills to manage their anger or to address the issues from the past that have compromised containment and self control? Certainly, the last possibility offers the most hope; however, whatever the reason, unquestionably the primary issue when violence erupts is reestablishing safety however that has to be done - even if it means the ending of the relationship. The harsh truth is that whatever was the original issue that needed addressing is lost whenever violence occurs. It becomes superceded by the violence

itself.

For some it may seem like a victory but it begs the real question. Emotionally, both the one being violent and the one targeted are both victims.

One reason both the passive and the violent response to anger are destructive is because it is impossible to determine the real problem so that it may be addressed. The energy required to find a solution is passively withheld or discharged in acting out. The most important thing about anger is that it spotlights the issues. If we pay attention to our bodies there well be no mistake where some of our major issues are. The juice of our adrenaline ultimately tells us what needs attention, what boundaries have been violated, what old wounds still need healing, and what is our leading edge of growth. Our job is to feel and contain the emotions that emerge, learn to language our frustrations in non abusive non-targeting ways, and know that the ultimate goal is to focus on new mutually agreeable solutions. When dealing with anger, the difference from being alone and being in a relationship is to recognize that your partner is going through the same process; and from time to time, you will inevitably bump against one another. To understand the role of anger in relationship lends insight, understanding, forgiveness and even gratitude to the process.

These Things Come in Stages
By Sue Marriott, LMSW-ACP, CGP

Ah, these most coveted and dreaded of things called relationships. They are maddening no matter, and they invite the ugliest part of ourselves to emerge as well as the most precious, tender aspects of our being. Damn them. This is the first of a four-part series on the most elusive of relationships, the long-term, romantic variety.

Some of the major conflicts couples face have more to do with the stage of relationship they are in rather than something really "wrong" within the couple. So, this first column will address the stages of same-sex relationships. The following is from a combination of studies and general theories (bibliography available upon request). Read it as a fluid cycle rather than a linear list, as each couple spends more or less time at each stage depending on many factors, and they go back and rework stages as necessary to continue growing. Try to identify where you tend to get stuck in trying to develop long-term relationships or where you and your partner are, then compare notes.

The first stage is The Urge to Merge. This is that feel-great, highly idealized romantic stage that many people presume will last forever. The infatuated couple is together a great deal; they no longer feel isolated and each are consumed with the other, even when apart. Each partner is idealized and differences are de-emphasized. This is a time of high sexual activity and when you get that euphoric "love high" so often sung about by teen idols and Hollywood story lines

While it feels great when you're in it, it's partly based on the fantasy of you who you hope and need the other person to be and what you dream your new love relationship will be like. This stage is designed to arrest your attention, pheromones and dreams, but it is not designed to last. Merger and fantasy begin to give way to a love more substantial.

After this love high, it may be weeks or even a year before you enter the second stage, That Used to be Cute, but... There is still a strong felt sense of love, but anxiety can set in as the couple tries to find compatibility, set up house, and commit to one another. Differences are coming into awareness for the couple and what used to be cute might begin to be annoying.

"I thought he was the one but now he's not so hot. Maybe I made a mistake." Remember, things are cooling off now because your desire levels were artificially pumped up due to the "love high" of Stage 1, and they are returning to more normal levels now. This will happen at some point no matter who your lover is. Ambivalence is normal at this stage. The payoff for staying the course through Stage 2, of course, is that each of you gets to see and be wholly seen and appreciated for who you really are - not a two-dimensional figment of someone's imagination.

The third stage begins when the "WE" loses to "ME." Some folks say this is when love emerges as a verb. This stage is marked by the need to individuate and re-establish a separate sense of self. The tricky thing here is that it sometimes does not emerge at the same time for each partner and thus can cause conflict.

Fear of being smothered and/or abandoned often gets triggered in this stage, which can temporarily make anyone feel pretty insane. The relationship is deepened or threatened as each member begins to take risks by expressing things they dislike about the other and admitting that they need more than just each other. It is a challenging time for most couples and many need outside support to work through this stage.

On the up side, the third stage is also the time of creating more honest and open communication patterns, creating a real sense of home, resolving issues of sexuality and monogamy, and establishing rituals and traditions with one another, all increasing the felt sense of stability of the couple.

When the issues of Stage 3 are settled and dependability strongly emerges, the couple enters the fourth stage of same-sex relationships, the OK, I Can Count On You stage. The couple can now balance the WE vs. ME issues, with each partner being both an individual and an interdependent part of the couple. Intimacy is enhanced which often leads to enriched sexuality. The couple can now collaborate towards new goals and pool resources better than ever. Each may have a felt sense of rediscovering the other and falling in love all over again.

Often, couples learn to depend on each other and then move in to Stage 5, the I Accept You Completely...Yaaawn. There is deep acceptance and trust and little desire to change one another after recognizing and fully accepting each other. Close friendships and companionship are the main characteristics of this stage, as well as a higher quality of relationship. Financial resources are no longer shared as much as they are owned by both.

The couple may find life with each other too settled, however, and may begin to take each other for granted. The individuals may experience their own mid-life crises. Again, recognizing that it is simply a stage in a maturing relationship and a stage in individual development helps. So does working to rekindle the passion and romance, and reconnecting with one's fondness and admiration for the other. There was a good reason you fell in love - remember and celebrate your lover.

After resolving these issues the sixth and final stage - Mature Love - is reached. The couple indeed "falls in love" all over again but this time it

is with the actual person in front of them rather than the fantasy of who they see in Stage 1. Independence and interdependence are balanced, deep intimacy and security is reached, and sexuality is enhanced. The couple also enjoys fond memories of shared time together, while issues of health, financial security, productivity and meaning of life may become more important.

The couple at this stage often shares strong spiritual experiences, regardless of religious differences, and a new, creative energy unique to the couple may emerge along with a desire to give something back to the community. And the really rewarding, fun part is that you keep dealing with the vicissitudes of life as you need to but with the security and confidence of knowing you will be together forever.

Mr Stagger Lee,
As I had a few moments I have never minded viewing another ones positions as this is a free country thanks to folks that worked at that issue a heckuva lot more than type on a damn computer. ITS JUST WHEN YOU STATED BY QUESTION "ARE WE THE NEW NAZIS".? I PERSONALLY DID NOT GIVE THAT OR ANY OF THE REST OF YOUR BABLINGS ONE MORE MINUTE..THE TRUTH ABOUT YOUR FREE SPEECH IS THAT OF COURSE WE ALL HAVE THE ABILITY TO CHANGE THE CHANNEL OR TURN YOU OFF AND THAT IS EXACTLY WHAT I DID. I MEAN THIS. DONT YOU EVER SUGGEST ON ANYONES BEHALF THAT ""we:"" COULD POSSIBLY BE CONSTRUED AS THE NEW NAZIS. YOU HAVE THE RIGHT TO SAY WHAT YOU WANT BUT NOW I AM INVOKING MY RIGHT TO TELL YOU NOT TO INCLUDE MYSELF AND MANY OTHERS I AM QUITE SURE OF THE FACT THAT WE DONT APPRECIATE YOUR REFERENCE THAT WE ARE YOUR SO CALLED "NEW NAZIS" BECAUSE WE COMPLETELY DISAGREE WITH ANYTHING YOU HAVE TO SAY AFTER THAT POINT. WHY DONT YOU START YOUR OWN NAZI PARTY BUT LEAVE DECENT PEOPLE OUT OF IT. WE HAVE ABSOLUTELY NOTHING TO DO WITH NOR WOULD WE SUPPORT ANY ASSHOLE IN SUPPORT OF ANOTHER HOLOCAUST. AND I AM NOT JEWISH. JUST COMPASSIONATE AND IF YOUR TICKED OFF BECAUSE THIS IS IN CAPS INSTEAD OF LOWERCASE THEN BLOW THAT OUT YOUR PROVERBIAL ASS AS WELL. YOU MAY FIND SOMEONE WANTING TO HEAR THAT.
THANKS

No! It makes the U.S. Constitution the supreme law for
America and its citizens, ... not some foreign courts.

BULL! Our company (large electric utility) is still using some PEs
and MVPs that are performing well within factory specs and need little
if any maintenance. Same goes for the MT500s that you had a "comment"
about in another one of your posts.

Bottom line...if the users are happy with the radios and do not want
to foot the bill for new units, there's no reason to not keep the old
ones in service provided they are not costing too much in maintenance.

Whatever your position in the company is, you're obviously not the guy
who has to fix the radios.

Radio techs cringe at seeing equipment that old in for repair,
especially GE equipment that old.

I do not believe your claim that PE's, which have been in continuous
use in a heavily industrial environment, are still performing reliably
today.

>Bottom line...if the users are happy with the radios and do not want
>to foot the bill for new units, there's no reason to not keep the old
>ones in service provided they are not costing too much in maintenance.

Users have little say in what equipment they are issued, or when it is
replaced. Management makes that call, and users can do little other
than gripe to each other about it in the break room, or gripe to the
tech when they drop off the old crap for repair.

Not to forget 156.8 Mhz
http://www.tpub.com/inch/12.htm

This is a distress frequency that I got to hear in action near Conneaut Ohio a couple of weeks ago. The weather had been variable, nice, evil, nice, evil, throughout the day. The weather close to evening had settled, Lake Erie was calm, but the sky to the north west showed ominous clouds. The coast guard issued a call reporting a 12ft boat mile off shore and mile east of some power plant. Supposedly, there were reports of someone yelling for help from the boat. The coast guard wanted any boats on the lake to look in the area described, but the problem was that there was virtually no traffic on the lake at that time, the sun was setting, a storm was threatening, and it was evident that a fog bank was drifting into the area in question. The coast guard kept issuing the distress call about every 15 minutes, no one ever responded. After about 1 hour, I was about to give up hope on anyone rescuing the 12 foot boat, or at least verifying that no one was in the reported area when the coast guard finally issued a statement that the distressed boaters were rescued. The radio traffic continued on whether or not the female occupant of the boat needed a doctor, but I never heard the outcome.

If you go onto the lake, please take the appropriate 2 way radio with you, and a GPS wouldn't hurt.

"I" use an MT 500 and it works well. I bought it used and working for a good price.. I have a shop here so I can maintain it myself. But since I've bought it and installed the frequencies I needed, I've not had to touch it since. And that has been at least 3 years. And I DO use it for Public Safety. IF they work, there is nothing wrong with using them. Finding a junker and repairing, now THAT may be a waste of time. It all depends on one's needs, ability to buy new or used, price and any ability to maintain. Got to weigh out the choices. For my needs, a used radio that I could put the frequencies in and maintain sufficed. Some of the older equipment is preferred due to ease of repairing. Some of it finds a good home in public service or ham bands. Just because it is old in years or perhaps technology, doesn't necessarily make it obsolete. Lou/Tech@DP.NET

754. Where to buy in Calgary or Saskatoon

Newsgroup: rec.radio.scanner

Hi

I was wondering if someone could suggest a place to purchase a radio scanner in Calgary or Saskatoon in Canada. I was talking to someone today who is interested in buying a scanner and was in a Radio Shack in Calgary today. The guy working there was apparently pretty dim when it comes to scanners. I looked through some old newsgroup articles and see others have had similar experiences in Calgary since the police went digital.

They are looking for an analog trunking scanner but as they are new to scanning would like a place where someone knows a little bit about what they are talking about.

They will be travelling through Calgary later this week and in Saskatoon after that.

Does anyone have any suggestions on where they can go to buy a scanner.

Thanks,
dja

Former firehouse now home to lesbian, cats and Paraguayan memories
by Will Doig
Published on 05/08/2003

The D.C.F.D.'s Firehouse #9 was built in 1865. Following its condo conversion in the mid twentieth century, it was bought by the U.S. military and, rumor has it, used as a way station for money laundering during the Iran-Contra scandal of the 1980s. Jane Troxell, a manager at Lambda Rising, now lives there with her two cats.

JANE [in living room]: I went to Paraguay for two years with the Peace Corps. I sold everything -- the Saab, the house, the motorcycle, the business. I used to own Lammas [Women's Books & More] and now the Log Cabin Republicans are in that space. You have to roll with the ironies, I guess. So my decorating style now could be called "traditional regrouping." I'm regrouping in life.

The Peace Corps is not a high paying job. I had almost nothing left and had to start from scratch, basically relying on the generosity of acquaintances, friends, nature, the universe. In the beginning, I had all this furniture in a circle, and all of the Peace Corps Paraguay parties were here. We could all just bounce off of each other. But now, well, the room is linear. Parallel, actually. Before, social life had been coming in a circle, and then suddenly it was just parallel lives, crossing but never meeting. Now this entertainment center has become the focal point of the room. I don't watch much TV, so I use it to display my collection of Peruvian religious artifacts and Paraguayan erotic statues. This one is a lovely virgin from Paraguay. And these two figures were done by the indigenous people there. Here's the man and here's the woman. He's got a drum, a sword, a little bow and arrow, a bowl of water and all of these feathers. What does she have. A bundle of twigs on her head. She's carrying the firewood while he gets all the accessories. That pretty much crystallizes the experience down there in Paraguay.

[On deck] I had a bad relationship with food while I was there, and my kitchen is so uninspiring. It's small, there's no natural light. It's not a good kitchen if you want to get enthusiastic about food preparation. What I'd actually like to do is prepare food out here. There's no water, but there's a grill that I use when it's warm out.

I became vegetarian when Reagan was elected because I just felt like I had to do something. I was vegetarian for fifteen years before Paraguay. The food there was all white and bland. White rice, white pasta. Everything

white. I gained twenty pounds, then got sick and lost it all. Eventually I got so hungry that I just had to eat something, so I developed this addiction to rotisserie chicken. I was living in the capital at the time, so I had access to it. It really changed my life, and I've been eating meat ever since.

[In bedroom] Last year that deck was gorgeous, just full of plants. This is the only room in the house where I can have plants inside, because of the light. People give me plants that they can't keep anymore. My friend's mother died and so I took her corn plant. It was three inches then. Now it's a foot. Her legacy grows on in vibrant green. I like having unruly plants. I appreciate unruly behavior in all beings, floral and otherwise

Gay couple withdraws surrogacy bid
18 May 2003
By DONNA CHISHOLM

Two gay men who sought ethics approval to become surrogate parents have withdrawn their application, saying they are outraged at the prejudice against them and the way word of the proposal was made public.

They told the Sunday Star-Times the system which required them to seek approval was fundamentally discriminatory. Their application was to be considered next month.

"A single woman can get pregnant with the assistance of a fertility clinic and use the donor of her choice. Even a lesbian couple is not subject to such scrutiny."

The men live overseas but hoped to have a child through artificial insemination of the sister of one of them.

The Catholic church has publicly opposed the plan saying it would be wrong to deprive the child of its mother. But the men said they always intended the surrogate mother to play a significant role in the child's life.

They rejected the view that having two loving parents bringing up a child was undesirable just because both parents were men.

"Family units are more varied in their nature and structure today than ever before, and a modern society needs to adjust its thinking and perception accordingly."

Their lawyer Antonia Fisher said she had met both men and the sister. They were well-adjusted individuals with integrity and honesty and she was struck by their genuine desire to become parents. That desire remained, she said.

The men said there were deep-seated flaws in the ethnics committee structure and there were not appropriate guidelines or protections in place to cope with applications like theirs.

Many gay couples have children with men or women friends without seeking ethical approval, but Fisher said her clients wanted to do everything by the book.

Their attempts to work through the correct channels and within the system had worked against them, they said, and the committee had not approached

the application in the way they expected.

"We have been hindered by delays, costs and prejudice which we didn't expect to find in New Zealand."

Fisher has complained to ethics committee chair Professor Sylvia Rumball asking how potentially identifying details about the case were leaked. The details were not listed in the minutes.

"Our privacy has been invaded," the couple said.

Fisher said the men were mortified that such a personal matter had become public.

Rumball was out of New Zealand and unavailable to comment and her deputy Ken Daniels could not be contacted.

-----BEGIN PGP SIGNED MESSAGE-----

Ahmar Mustikhan, Gay.com / PlanetOut.com Network
Friday, May 16, 2003 / 05:26 PM

Fifteen cities and counties -- up from just eight a year earlier -- prohibited workplace discrimination in 2002 on the basis of sexual orientation, according to a report released on Friday by the Human Rights Campaign (HRC) Foundation's WorkNet project.

The annual report, fourth of its kind, also said 16 jurisdictions added protection on the basis of gender identity last year, up from five in 2001.

Altogether, 119 cities and 23 counties across the United States have so far outlawed workplace discrimination, according to the "The State of the Workplace for Lesbian, Gay, Bisexual and Transgender Americans."

"City ordinance is the only form of protection in states where discrimination at the workplace is allowed," Daryl Herrschaft, associate director for HRC WorkNet and chief author of the report, told the Gay.com/PlanetOut Network.

He said though the progress was tremendous and the majority of Americans support equal treatment, "vast majority of states, cities and counties still do not protect GLBT workers."

Herrschaft said, "Ignorant and uninformed religio-political activists who erroneously believe sexual orientation is something chosen have invested significant wealth and time into stymieing progress."

His senior colleague, HRC Education Director Kim I. Mills, who oversees WorkNet, said, "While federal law continues to lag, local and state legislators are stepping up and fixing some of the inequities."

Overall the improvements were significant. The number of employers offering domestic partner health insurance benefits grew by 16 percent in 2002, compared to 24 percent the year before; the number of employers with sexual orientation nondiscrimination policies rose by 7 percent, compared to 17 percent in 2001.

Said Herrschaft, "The fact that both indicators grew as much as they did is perhaps the clearest indication that these policies are good for business and that they have become a fact of American commerce."

The report also noted that 15 Fortune 500 companies had nondiscrimination policies covering gender identity at year end -- a three-fold increase over 2001; and 61 percent of the Fortune 500 included sexual orientation, up

from 51 percent in 1999.

It said 20 Fortune 500 companies implemented domestic partner health insurance benefits in 2002, accounting for a total of 169 by the end of 2002. The new ones on the list include Pfizer, Procter & Gamble, Sears, Roebuck and Raytheon.

The number of large corporations that publicly endorsed the Employment Non-Discrimination Act (ENDA), a federal bill to ban anti-gay job bias, jumped from 60 to 90 -- an increase of 50 percent from 2001. These included Agilent Technologies, Apple Computer, BP, Capital One Financial, Cisco Systems, Coors Brewing, IBM, John Hancock Financial Services, J.P. Morgan Chase, Levi Strauss, Nationwide, Nike, Shell Oil, Verizon Communications and Worldspan.

In 2002, New York became the 13th state to prohibit sexual orientation discrimination in the workplace, while Alaska became the ninth to prohibit such discrimination against state employees.

Thirty-seven U.S. states allow discrimination on the basis of sexual orientation and 44 on gender identity, according to the HRC.

MSP sets record straight on gay jibe

Pensioners' party MSP John Swinburne has offered to apologise for any offence caused by anti-gay comments allegedly made at a hustings meeting before the Holyrood elections.

Mr Swinburne, the only MSP of the Scottish Senior Citizens Unity Party (SSCUP), is alleged to have described homosexuals as "sick" at a hustings in Wishaw, attended by First Minister Jack McConnell.

Witnesses claim that Mr Swinburne admitted that he was homophobic and that he "did not understand this gay business" after he was asked his views on same sex marriage.

However, the 72-year-old MSP now says that he does not have a "homophobic bone in his body".

Same sex marriage

And he has signed up to Green MSP Patrick Harvie's Bill on Civil Partnership agreements, which would give gay couples similar rights to married couples, in a bid to set the record straight.

A spokesman for the first minister said that Mr McConnell had been "shocked" by Mr Swinburne's comments.

However, Mr Swinburne told BBC Scotland's Politics Show that he did recall being asked a question about same sex marriage but could not remember making homophobic comments.

"My response was as follows: 'I have been married for 50 years, I can't get my head round this problem. I do not understand it and as such I am not competent to give a direct answer'," he said.

If, however, other comments which are alleged to have been said by me have caused any upset to anyone in society, I will humbly apologise to them

John Swinburne
"That is all I can remember saying.

"If, however, other comments which are alleged to have been said by me have caused any upset to anyone in society, I will humbly apologise to them."

Mr Swinburne said his attitude to homosexuality was "live and let live".

"As long as they are living within the law I have no problems with anyone," he said.

The revelations comes just days after Liberal Democrat MSP Margaret Smith announced that she was a lesbian.

The married mother-of-two revealed that she was having a relationship with the wife of a civil servant.

By REBECCA CARROLL, Associated Press

WASHINGTON (May 16, 2003 5:28 p.m. EDT) - The number of U.S. employers offering health insurance benefits to same-sex domestic partners rose by 16 percent last year, according to a study released Friday by the nation's largest gay and lesbian organization.

The annual report also found a sharp increase in the number of local governments that passed laws in 2002 barring workplace discrimination based on sexual orientation employees.

At least 806 employers of all sizes expanded their health benefits in 2002 to include same-sex partners. A total of 5,698 employers offered health benefits to same-sex partners by the end of last year, according to the study by the Human Rights Campaign Foundation.

The number of Fortune 500 companies offering domestic partner benefits to same-sex couples grew by 13 percent for a total of 169 at year's end. ChevronTexaco Corp.; Sears, Roebuck and Co.; and Procter & Gamble were among the companies that introduced the benefits.

Married couples still get more work benefits than gays and lesbians. But Kim I. Mills, the foundation's education director and editor of the report, said progress is being made.

"As employers offer domestic partners benefits, that's a step toward a level playing field," she said.

Fifteen cities and counties enacted laws in 2002 banning discrimination based on sexual orientation, compared with eight in 2001. By the end of last year, 119 cities and 23 counties had such laws in place.

Policies that prohibit discrimination on the basis of sexual orientation were in place at 61 percent of Fortune 500 companies by the end of 2002.

New Census Data Gives Landmark Insight Into Gay and Lesbian Households
05.14.03

NEWLY RELEASED CENSUS DATA SHOWS AVERAGE CALIF. HOUSEHOLD HEADED BY
SAME-SEX COUPLE VERY SIMILAR TO OTHER STATE HOUSEHOLDS

Despite Numerous Similarities with Other Families, Gay and Lesbian
California Families Lack Equal Rights, Protections Under the Law

WASHINGTON - The average California family headed by a same-sex couple shares many similar characteristics with other state families -- including the number of children being raised, home ownership and home value - according to an Urban Institute analysis of newly released Census 2000 data commissioned by the Human Rights Campaign Foundation.

"This study should serve as a wake-up call to both state and federal leaders. Families headed by same-sex couples are much more similar to most other families than they are different -- yet all too often they don't enjoy the same rights and protections," said HRC Communications Director and Senior Strategist David M. Smith.

"The newly released Census 2000 data provides a detailed portrait of gay and lesbian families that can inform and frame public dialogue about issues that affect all American families," said Gary Gates, Ph.D., of the Urban Institute's Population Studies Center. "It reveals that laws on adoption, marriage, immigration, tax and military service clearly impact all Americans, regardless of sexual orientation."

The study showed that the average same-sex couple with children in California is raising 2.01 children, while other average couples are raising 2.08 children. While the size of families raised by same-sex couples is roughly the same as families headed by heterosexual couples, the number of rights and protections they are granted is not. Without any form of legal relationship recognition for same-sex couples, laws that most American families enjoy are not always available to children and families of same-sex couples.

"Given these findings, it is all the more mind-boggling that the California Supreme Court was asked just this week to nullify thousands of legal relationships between gay and lesbian parents and the children they are raising," said Lisa Bennett, who runs the HRC Foundation's FamilyNet project (www.hrc.org/familynet), the most comprehensive resource on gay,

lesbian, bisexual and transgender families. "What kind of society grants some children full rights and ties to both parents, but denies the same security to other children, simply because of who their parents are?"

In California, 60.6 percent of same-sex couples own their homes, and 67 percent of other couples own their homes, which, according to the census, have the same median value of $225,000. Same-sex couples, however, will often be forced to pay higher taxes on their homes as they do not have access to the tax, inheritance and shared property benefits that are associated with marriage.

"There are more than 1,000 federal rights, responsibilities and obligations associated with marriage that same-sex couples have no access to. Home ownership is just one example of how gay and lesbian couples are often forced to pay higher taxes for fewer rights than other Americans," said Smith.

The Domestic Partner Rights and Responsibilities Act, A.B. 205, is a bill before the California Legislature that would grant registered domestic partners and their families nearly all the rights and responsibilities currently available to married couples under state law. HRC is part of a coalition of groups in California, lead by the California Alliance for Pride and Equality (CAPE), working to support A.B. 205.

"From child custody and child support obligations, to community property and mutual responsibility for debt - gay and lesbian couples and their families need and deserve the same laws and protections that any other couple does," said HRC National Field Director Seth Kilbourn.

The frequency of same-sex couples and other couples in California in binational relationships is also similar, with 10.6 percent of same-sex couples and 11.3 percent of other couples in binational relationships. The Permanent Partners Immigration Act (PPIA, H.R. 832) would grant the same-sex partners of U.S. citizens and same-sex partners of lawful permanent residents the same immigration rights that legal spouses of U.S. residents enjoy.

"Immigration is yet another way that we see one set of Americans enjoying rights that other Americans have no access to. Supporting PPIA is one way that lawmakers can help to alleviate the inequity that gay and lesbian Americans face each day," said Smith.

Finally, the study also showed that California's gay men and women are an undeniable part of the country's military. In fact, 6.7 percent of coupled lesbians in California have served in the military, compared with only 1.3 percent of married women; 15.5 percent of gay coupled men have served in the military compared with 26.8 percent of married men.

"Clearly, there are significant numbers of gay men and lesbians serving in the military -- it is unconscionable that they should have to serve under a gag order while risking their lives for their country," said Smith. "In fact, these numbers show a substantially higher rate of lesbian women serving in the armed forces than other women, and yet their contribution is

marginalized by the deeply insensitive and cruel 'don't ask, don't tell' policy."

The new analyses were drawn from the recently released Census 2000 1% Public Use Microdata Samples (PUMS), a sampling of individual census records from one in 100 U.S. households. The census does not ask questions about sexual orientation. Rather, gay and lesbian families are understood to be households where the respondent identifies another same-sex adult in the house as his or her "husband/wife" or "unmarried partner." Data about the nation's single gay and lesbian population is not available from the census.

Information on individual states is being released incrementally, with California among the first 15 states to have data published. A full report will be completed once statistics on all states are available.

The Urban Institute is a nonprofit nonpartisan policy research and educational organization established to examine the social, economic, and governance problems facing the nation. More information is available at www.urban.org.

The Human Rights Campaign is the largest national lesbian and gay political organization with members throughout the country. It effectively lobbies Congress, provides campaign support and educates the public to ensure that lesbian, gay, bisexual and transgender Americans can be open, honest and safe at home, at work and in the community. The Human Rights Campaign Foundation provides public education on issues important to gay, lesbian, bisexual and transgender Americans.

Tomorrow Iï¿½m heading to Tampa to do some fishing Tuesday & Wednesday. While there I plan on having a few scanners with me. I have a detailed list of MilAir freqs for MacDill as well as FM Analog freqs. What Iï¿½m looking for is info on their 400 MHz trunk system.

I have a list of freqs however that list came from a list which is usually outdated. Plus that list didnï¿½t provide the Base freq or offset, two items needed to trunk a 400 MHz system. Iï¿½m looking for some updated info on the MacDill system.

Any help would be appreciated.

Thanks
George

Oh you got me there, "obviously". I have been a technician for 30
years now.....I don't cringe when I see an old-timer come in to be
repaired.

Each department's management has to pick up the tab for their own
equipment. If they have units that are working fine and not causing
them any problems, they keep them in service to hold down costs. Yes,
we have been buying new radios. Yes, we retire the old ones when they
come in and need a lot to repair them.

I stand by my claim that we have PEs and MVPs that are still working
up to factory specs. Not a lot left to the original fleet, but some
are still hanging on.

Skip, I completely agree with you. Yes, I should have said that by
default, permission must be sought. However, most airlines have
established policies which give permission to use such devices at
certain stages of flight. At that point, the PIC has the authority AT
ANY TIME to request that PEDs be powered down. In a practical, every
day sense, what I say is correct.

Other than that, we're arguing semantics.

Meanwhile, I'll happily listen to my walkman in my airplane unless it
interferes with the VOR receivers. This can happen if the VOR
receiver is tuned to 10.7 MHz above the Walkman's station frequency.
I'll leave the math and the reasoning as an exercise for the reader.

-----BEGIN PGP SIGNED MESSAGE-----

WASHINGTON, May 14 (AFP) - Hoping to counter their image as the party of straight, white Americans, the Republican party is reaching out to blacks, Latinos, gays and other minorities in the hunt for votes.

With campaigning for next year's presidential and Congress elections already under way, it is demographics that weighs heavily on the minds of President George W. Bush and his advisors.

Population growth among blacks and Hispanics -- who tend to vote overwhelmingly Democratic -- is outpacing that of whites, and political observers say the Republican party must broaden its base to maintain control of the White House and US Congress.

"With demographic realities being what they are, you can sit still for a decade and the Democrats will begin to take over again," said political analyst Ron Walters of the University of Maryland.

The efforts have become evident in recent days. White House officials and Congressional Republicans held meetings with members of the Log Cabin Republicans, a national conservative gay and lesbian organization, at the weekend.

The attention to the homosexual vote comes after years of marginalization by the party, said the group's spokesman Mark Mead, who said that under the Bush administration, being a gay Republican no longer feels like an oxymoron.

"The president has said he has wanted to take the heartburn out of the party over this issue," said Mead, calling the White House courtship of gays "an incredible breakthrough."

There appears to be no such breakthrough as yet with racial minorities, however, although Republican lawmakers insist it's not for lack of trying. Republican leaders have begun a recruitment drive for more minority staff, for example, but so far there have been few applicants.

"The progress that has been made is collecting the names and resumes of those that want to work here," House Majority Leader Tom DeLay told a recent press briefing.

"We are an open and inclusive party to anyone that believes in the same things that we believe in," DeLay said.

Republicans are also taking part in more photo-ops like one last week, when Pennsylvania Senator Rick Santorum joined other party leaders for a ceremony at the Frederick Douglass National Historic Site, the boyhood home of a former slave who became a noted author and newspaper publisher.

"Fulfilling Americas promise for all Americans has been and will

continue to be a priority for all Republicans," Santorum declared at the event, at which Republican leaders promised nearly one million dollars in federal funds for the landmark's restoration.
But Santorum was at the center of a controversy which called into question the party's commitment to inclusiveness, creating a furore when he made remarks last month equating gay lifestyle with polygamy, incest and adultery.
Such comments cost the party some support among gays.
"The damage done by Rick Santorum's comments -- and the rallying around him by Republican luminaries, including the president -- undermines any progress that might have been made on outreach," said political analyst Thomas Mann of the Brookings Institution.
Meanwhile, Mann said, Republican outreach efforts have "been utterly ineffective with African Americans."
Walter agreed. While the Bush White House can point to prominent black figures like Secretary of State Colin Powell and national security advisor Condoleezza Rice in the administration, he said most black voters pay more attention to policy issues like aid to cities, housing or affirmative action.
"They are trying to do things at the edges while maintaining the central thrust of their message. That won't work," with blacks, Walter said.
And however earnest their efforts to broaden their base, pundits point to an unfortunate penchant among party elders to make statements perceived to be anti-minority.
In December, Senate Republicans were forced to ditch their leader, Trent Lott, after he made remarks that seemed to wax nostalgic for racial segregation.
And just last month, Republican Barbara Cubin offended many black colleagues in the House of Representatives during a floor debate on gun legislation.
"One amendment today said we could not sell guns to anybody under drug treatment," said Cubin, of Wyoming.
"So, does that mean if you go into a black community, you cannot sell a gun to any black person?" she said, in comments that her black colleagues called "insulting."
Black voters, said Walters, perceive a "strong racial subtext" in such comments that will like keep them in the Democratic fold.

Scott Long Announces Resignation from IGLHRC
For Immediate Release: May 16, 2003

For additional information, contact:
Nicky McIntyre, (415) 202-7640, nicky@globalfundforwomen.org

SAN FRANCISCO - Scott Long, Program Director for the International Gay & Lesbian Human Rights Commission (IGLHRC), has announced his resignation. Long has been employed with IGLHRC since 1997 and has been affiliated with IGLHRC since the early 1990s.

"Scott has made many important contributions to IGLHRC which have directly impacted the lives of many people around the world," said Nicky McIntyre, Chair of IGLHRC's Board of Directors. "For more than a decade, Scott has advocated for human rights, and has worked to make those rights a usable and accessible instrument in struggles for social justice."

During Long's tenure IGLHRC saw unprecedented successes at the United Nations where human rights violations against LGBT people are squarely on the agenda of world leaders. This past year alone, Long's work with the United Nations resulted in the Working Group on Arbitrary Detention issuing an Opinion condemning detentions based on sexual orientation, the first time this has occurred. Long is also credited for his advocacy on behalf of the Cairo 52 in which 52 Egyptian men were arrested in May 2001 and were tortured in detention, and jailed continuously until their trial. In addition, under Long's leadership as Program Director, IGLHRC expanded its work with LGBT grassroots activists in Asia, Latin America, and Africa.

Long has been a longtime human rights activist. Beginning in the early 1990s, while living in the former Soviet bloc, he gathered detailed information on Romania's mistreatment of gays and lesbians, and led over forty missions to Romanian penitentiaries, reporting extensively on conditions there. He has worked closely with many LGBT groups in Eastern Europe and elsewhere, as well as with human rights groups including the Romanian Helsinki Committee. In 1993, he conducted the first fact-finding mission on the situation of gays and lesbians in Albania. He is the author, among other articles and reports, of Public Scandals: Sexual Orientation and Criminal Law in Romania, co-published by IGLHRC and Human Rights Watch, and has edited and contributed to recent reports on gay and lesbian parenting, and on the use of sexuality to target women's and feminist organizing worldwide. He holds a Ph.D. from Harvard University; he has taught as a visiting professor at the University of Budapest, and for two

years was a Senior Fulbright Professor of American Literature at the University of Cluj-Napoca, Romania.

More Than One Third of Gay College Students Experienced Harassment in Past Year
05.13.03

Half conceal sexual orientation to avoid intimidation, 43% call their campus homophobic

"...'coming out' to my adviser would destroy my academic career."

"...people in passing cars have screamed 'faggot' at me."

"I think the administration can do more to enforce safety & policies that will help GLBT students..."

- - Responses to the Campus Climate Assessment Survey

New York, NY - With students and professors finishing up final exams and incoming college freshman finalizing their college plans, today the National Gay and Lesbian Task Force (NGLTF) Policy Institute released the largest-ever study of the climate on U.S. college campuses toward gay, lesbian, bisexual and transgender (GLBT) students, faculty and staff.

"Campus Climate for Gay, Lesbian, Bisexual, and Transgender People: A National Perspective," authored by Dr. Susan R. Rankin, found that more than one in three GLBT undergraduate students have experienced anti-gay harassment within the past year. Almost 1700 students, faculty, administrators and staff in 14 colleges and universities throughout the country were surveyed for the report.

"It is extremely alarming that, in 2003, people on college campuses continue to experience anti-GLBT harassment," said National Gay and Lesbian Task Force Executive Director Lorri L. Jean. "Higher learning institutions should be at the forefront of educating people about the damage of homophobic and transphobic acts. Because most of the fourteen universities surveyed provide visible support through pro-GLBT policies and resources, we can only imagine the extent of homophobia on college campuses across the country."

"Campus Climate" reveals that almost a fifth of respondents had feared for their physical safety in the last year because of their sexual orientation or gender identity, and 43 percent considered the climate of their campus to be homophobic.

Other findings include:

41 percent of the respondents stated that their college/university was not addressing issues related to sexual orientation or gender identity;
51 percent of the respondents concealed their sexual orientation or gender identity to avoid intimidation
71 percent felt that transgender people were likely to suffer harassment, and 61 percent felt that gay men and lesbians were likely to be harassed.

"While there have been significant improvements over the past decade, clearly harassment and bias are still major concerns for GLBT students, faculty and staff," said Dr. Sean Cahill, NGLTF Policy Institute Director. "Almost all of the universities that agreed to participate in the survey have sexual orientation nondiscrimination policies and/or GLBT campus centers. However, most of the United States' more than 5,500 colleges and universities don't have such policies or programs in effect."

While most universities and colleges publicly commit to creating a welcoming and inclusive environment, their actions and policies often do not support these goals. In March 2003, Virginia Tech's governing board voted to eliminate its affirmative action policy and to remove sexual orientation from its nondiscrimination policy. When Virginia Tech students and staff protested, the university reinstated both policies.

An April 24, 2003 story in the California "San Diego Union-Tribune" reported that frustrated by a resurgence of racially and sexually motivated incidents, dozens of University of San Diego students and faculty walked out of classes and urged the administration to address anti-gay, racist and anti-Semitic sentiments on campus. Recent incidents cited by the paper included anti-gay graffiti scratched on a student's apartment door. The University of Southern California's Pridefest has been marred by anti-gay vandalism in recent years. And activists at universities across the country complain that signs for GLBT student activities are regularly ripped down and covered with anti-GLBT graffiti.

"Many GLBT campus members find that they must hide significant parts of their identity, thereby isolating themselves socially or emotionally," said Dr. Susan R. Rankin, "Campus Climate" author and lead researcher. "Those who do not hide their sexual orientation or gender identity have a range of experiences including discrimination, verbal or physical harassment, and subtle or outright silencing. While higher education provides a variety of opportunities for students and others, these are greatly limited for those who fear for their safety, feel they must censor themselves, or are denied opportunities because of their sexual orientation or gender identity," said Rankin, a Senior Diversity Planning Analyst at the Pennsylvania State University. "We hope this report will assist educators, activists, student leaders and elected officials in making universities safer and more accepting of GLBT people."

"Campus Climate" makes policy recommendations to universities and colleges that are seeking to create a truly inclusive environment that supports and values all, including:

Extending employee spousal benefits to domestic partners;
Including sexual orientation and gender identity or expression in the
institution's nondiscrimination clause;
Integrating GLBT concerns into university documents/publications;
Providing a clear, safe, visible means of reporting acts of intolerance and
responding expeditiously to such acts;
Including sexual orientation and gender identity issues in orientation
programs and employee trainings.
The "Campus Climate Assessment Survey," which serves as the basis for this
report, was a collaborative project involving NGLTF, the National
Association of Student Personnel Administrators, and the National
Consortium of Directors of LGBT Resources in Higher Education.

Deep Inside Hollywood
by Romeo San Vicente
May 14, 2003

Fangs very much, Elton

Elton John is heading back to the Great White Way, but instead of scoring an Egyptian queen, he's going for a sexy vampire. With his longtime collaborator, Bernie Taupin, John is writing the music and lyrics for a musical based on Anne Rice's "Vampire Chronicles" fiction series. Joining in the production is Warner Brothers Theatre Ventures, which made two of Rice's novels -- "Interview With the Vampire" and "Queen of the Damned" -- into feature films. The musical will focus on Lestat, Rice's charismatic, tortured and sexually ambiguous antihero (who was, of course, played by Tom Cruise in "Interview"). Taupin and John have said they don't want to make a rock opera and will avoid the classic gothic "I vant to suck your blood" shtick in favor of a more realistic portrayal of the character. The show should hit Broadway in 2005.

Shankman tries to "Topper" himself

White-hot, openly gay director Adam Shankman, who has made it into the Hollywood big leagues with the success of "Bringing Down the House," is making another movie with silver-haired star Steve Martin. Shankman will direct "Topper," a remake of the 1937 comedy classic that paired suave icon Cary Grant with Constance Bennett as a wealthy young couple who die in a car accident. As ghosts, they haunt a stodgy banker, Cosmo Topper, and encourage him to lighten up and live a little. In the new version, Martin is set to play Topper. Shankman and Martin have also committed to the sequel of "Bringing Down the House," along with the fabulous Queen Latifah and screenwriter Jason Filardi.

Being J. Edgar

Will the fascination with closeted G-man J. Edgar Hoover never end? There have already been a few bad movies made about the infamous witch-hunter, my favorite being 1977's laughable "The Private Files of J. Edgar Hoover." Now another is in the works -- investigative journalist Richard Hack has just sold the film rights for "The Puppet Master: The Secret Life of J. Edgar Hoover" to Stone Village Productions. Adapted from Hack's forthcoming book of the same name and executive produced by Michael Viner and Deborah Raffin ("Wilde"), the film at least promises to provide more concrete information than the previous ones about the contents of J. Edgar's closet. Maybe even

the pumps.

Easing on down ... again

Musical theater fans needing a "Wizard of Oz" fix will have their wish granted during the 2003-2004 theater season when "The Wiz" returns to Broadway. The 1975 Tony-winning musical has seen other revivals, but this one promises to be special. Producer-slash-director Des McAnuff, who helmed the snappy '90s revival of "How to Succeed in Business Without Really Trying," will direct the journey back down the yellow brick road with a multiethnic cast, and word is that it will be an "environmental" production, with the entire theater transformed into Oz. (Think the "Cats" junkyard -- if you dare.) No word on who'll fill Dorothy's ruby slippers, but Romeo is thinking Margaret Cho as Glinda, the Good Witch of the North. With maybe Lil' Kim as the lead Munchkin?

Volvo Cars of North America Continues Diversity Initiatives with Campaign Targeting the Gay Community
05.06.03

Volvo Cars North America, LLC (VNCA) today announced an integrated marketing and advertising campaign to specifically reach gay, lesbian, bisexual and transgender (GLBT) consumers, as part of its comprehensive diversity marketing strategy.

"At Volvo, Diversity is a big part of who we are and all that we do," said Thomas Andersson, Executive Vice President of Marketing for Volvo Cars North America."

"All consumers appreciate marketing efforts that speak to them personally and directly. These ads focus on Volvo quality, attractive styling and safety -- attributes of universal appeal."

The campaign, which recognizes that GLBT households are as diverse as the family of vehicles offered by Volvo, is intended to build a stronger connection between GLBT consumers and the Volvo brand.

With buying power estimated at $450 billion, the 14 million GLBT consumers represent one of the more significant customer blocks in the United States. The campaign is targeted nationwide, with a specific emphasis on the metropolitan areas of Atlanta and San Francisco.

Concurrent with the marketing initiatives, Volvo will also sponsor Human Rights Campaign (HRC) fund-raiser events in Atlanta and San Francisco (Black-Tie Dinners are scheduled for May 10 and July 26 respectively).

The Volvo campaign was coordinated with Ford Global Marketing. Diversity Inc. Magazine recently ranked the Ford Motor Company (FMC) as the number one company for its diversity initiatives. "This marketing program is another example of how FMC strives to be a leader in diversity marketing, which includes gay, lesbian, and bisexual consumers," said Jan Valentic, Vice President of Global Marketing at Ford Motor Company."

Ford's Global Marketing organization and Witeck-Combs Communications, a strategic marketing and public relations firm specializing in the GLBT market, developed the comprehensive campaign strategy. The campaign features print advertising and marketing programs tailored to this consumer.

The print ads were created by Prime Access Inc. of New York and will run primarily in national GLBT publications, beginning in May and continuing through August 2003.

In addition, Volvo will run a promotional on-line campaign concurrently.

CANNES, France, May 16 (AFP) - Are we about to see the ultra-butch
Crocodile Dundee go gay? According to a film industry magazine, it seems
that's exactly what Australian actor Paul Hogan is aiming for in his next
project.
But the transformation of "Hoges", as he is known Down Under, is to be
fictional in more ways than one in the movie, titled "Strange Bedfellows",
Moving Pictures International reported in its Cannes film festival issue
Friday.
In the story, to be made by Australian director/writer Dean Murphy, "two
Aussie blokes in a small outback town pretend to be gay for tax reasons --
and
then have to prove it to the tax inspectors, without the neighbours (who
know
better) giving away their secret," the magazine said.
"It's the funniest script I've had sent to me," it quoted Hogan as
saying.

Gaywatch: Cybill Shepherd becomes Martha Stewart
Christine Champagne

Cybill Shepherd met Martha Stewart about seven years ago at a television industry convention in New Orleans. "At the time, I thought, 'I'd be perfect to play her,'" Shepherd recalls. Nearly a decade later, Shepherd was cast as the domestic diva in "Martha Inc.: The Story of Martha Stewart," a TV movie airing on NBC Monday, May 19 at 9 p.m. EDT.

Shepherd -- whose credits include the TV series "Cybill" and "Moonlighting" and the films "The Last Picture Show" and "Taxi Driver" -- physically resembles Stewart. But the connection runs deeper than that, the actress explained during a recent conference call with reporters. According to Shepherd, she and Stewart are kindred spirits in many ways: They both started their careers as models, they were both desperate to overcome their humble upbringings and they both had to cope with the ramifications of fame.

"She's a complicated character, and I have a lot of sympathy for her," Shepherd says of Stewart. "I think she is a great woman -- a genius with frailties and problems and demons to dance with."

Among those "frailties" is a nasty temper. "There's no question that Martha' s a screamer, and she is difficult to work with," Shepherd acknowledges. But the actress -- who shared her own life story in the candid memoir "Cybill Disobedience" -- points out that she herself hasn't always had the best reputation. "During the shooting of 'Moonlighting,' I had a few moments of rage I'm not particularly proud of," Shepherd says. "But I went to therapy for 10 years, and really learned to deal with the rage."

Shepherd maintains that there is more to Stewart than the negative image the media has presented. She believes "Martha Inc." presents a more well-rounded portrait, including an in-depth look at Stewart's difficult childhood and relationship with her demanding father. "I hope I did her justice in terms of her vulnerability," Shepherd says. "Martha doesn't show that. You don't see that in her public persona, but I know it is there."

Based on the best-selling unauthorized biography by Christopher Byron, the biopic is comprehensive -- exploring everything from Stewart's working-class upbringing in Nutley, New Jersey, to her rise as one of America's wealthiest businesswomen to the current insider trading scandal that could ultimately destroy her empire.

"I think it is horrific, the way she has been treated in the press," Shepherd says, referring to the coverage of the ImClone scandal. "That's one of the things that drew me to the role. Also, I've had my savage press as well -- and often unfairly. I've had great press, too. I mean, I love the press, but they can't love you all of the time, and I do have to say that I've had a lot of lies printed about me?"

So what will Stewart think of this movie? "I think there will be moments when she goes, 'Oh my God, it didn't happen like that at all!' Or, 'I didn't do this,' or 'I didn't do that!'" But Shepherd stands by the accuracy of the film, noting that Byron's book, on which the film is based, started off as an authorized biography. "Then she withdrew her support for it... [but] she didn't sue the writer," Shepherd says.

Whether or not Stewart likes the movie, there is no denying that Shepherd is convincing in the role. "I'm not doing a caricature, and I didn't want to imitate her," Shepherd says. "I wanted to have the audience ultimately connect with the emotion [of the story]."

In addition to playing a wide range of emotions, Shepherd wields kitchen utensils and crafts tools in the movie like a professional. She denies having any skills as a homemaker, however. "It's called acting," Shepherd says. "I'm a real slob around the house. Martha Stewart would be horrified at my house."

The Crossdresser vs LaQuinta Inn Corp.
by Jeffrey Linamen
www.GayWebSource.com

Denver, CO - As a local cross dresser of the Denver area, Louis Smith enjoys performing in non-profit benefit drag shows. As most performing cross dressers, Louis takes his role seriously. To maintain his costume he regularly plucks his eye browse. Unfortunately this brought notice to the 41 year old, also know as Dixie Darlin. A female co-worker commented he must be a cross dresser, if he plucked the hair above his eyes. She also made a request for him to do hers.

Mr. Smith started working for LaQuinta Inn Corp. in July of 2002. He states just days after starting with the company he was getting feed back from other co-workers about being gay. Co-worker would ask him if he had Aids or knew anyone who was HIV+. Mr. Smith states he prefers not to discuss his sexuality and cross dressing preference in the work place, but coworkers continually and openly speculated about whether he was gay and from that if he cross-dressed. He reluctantly told several coworkers some fact about himself, believing this curiosity was honest rather than prurient.

Thus, curiosity was not tamed, this information only created a desire to know more. He started receiving phone calls at home asking questions about his shows. At one point he reported to work to find a large rainbow triangle on the wake up call logs at his computer monitor.

Mr. Smith states the snickering spread beyond his location and into other Laquinta locations. One week before his termination, he was contacted by a night auditor of the Westminster LaQuinta, asking for photographs and if he had a web site. He complied with the request and faxed photographs of his cross-dressing and supplied his web site URL. The general manager of that LaQuinta took the photos from the auditor's box, confronted him and demanded to know whom it was. The general manager was told that the performer was a night auditor form another location, Mr. Smith was terminated a week later on November 11, 2002

Mr. Smith has retained the Denver law office of James L. Abrams. Mr. Smith is seeking $25,000 for loss wages, pain and suffering. He is also seeking agreement from LaQuinta that the company will give him a positive reference and will not block his ability to seek unemployment compensation.

GayWebSource.com sent LaQuinta Inn Corp an e-mail requesting their policies on harassment and discrimination. We also asked them their views on dealing with the gay community and there comments on this situation.

Jeffrey M. Schagren, Assistant General Counsel of LaQuinta Corp. contacted GayWebSource.com by e-mail and advised he cannot comment directly on Mr. Smith's case due to the possibility of pending litigation. However, it is important to note that it is the policy of La Quinta Corporation to afford equal opportunity to all individuals in recruitment, hiring, treatment during employment, compensation and promotional opportunity regardless of race, color, national origin, ancestry, gender, religion, age, disability, veteran status or sexual orientation. Moreover, our organization's Policy Against Harassment specifically states that harassment by a co-worker, supervisor, manager or third party based on any of the preceding is strictly prohibited. As such, we take all complaints of discrimination and/or harassment seriously.

Letter Sent
to LaQuinta Inn Corp.

*GENARO C. ARMAS

WASHINGTON (AP) -- Gay and lesbian couples are slightly
better educated than married people and earn similar paychecks but
aren't as likely to own their homes, according to a study of Census
Bureau data released Tuesday.
More than 35 percent of people living with same-sex partners
had a college degree in 2000 compared with 28 percent of married
people and 19 percent of opposite-sex unmarried partners, said the
analysis commissioned and released Tuesday by Human Rights Campaign,
a gay rights advocacy group.
Median wages earned by gay and lesbian couples were equal to
married people -- about $32,000, $8,000 more than for opposite-sex
unmarried partners. About 64 percent of homosexual couples owned
their homes, compared with 78 percent of married partners and 41
percent of heterosexual unmarried couples.
The data were culled from detailed 2000 census data released
for 15 states so far. The Human Rights Campaign study includes data
from California, New York and Texas -- the states with the greatest
number of same-sex unmarried partner homes. Also covered was
Vermont, which three years ago passed the nation's first civil union
law recognizing gay and lesbian "domestic partnerships."
Human Rights Campaign strategist David Smith said the study
shows homosexual couples are "a mirror image of the majority of
families in the country" who should have the same benefits and
protections.
The 2000 census was the first in which the bureau
extensively analyzed data for unmarried partners, regardless of
sexual orientation.
A question on the census asked "How is this person related?"
For people living together who were unrelated, options included
"Roomer, boarder," "Housemate, roommate," "unmarried partner" and
"foster child."
Gay rights groups considered a person living with someone of
the same sex who checked off unmarried partner to be homosexual.
The Census Bureau does not ask about a person's sexuality
and is required by law to keep answers confidential.
Data released two years ago revealed there were 594,000
households headed by same-sex partners -- about 1 percent of the
nearly 60 million households in the United States led by couples.
The vast majority of those homes -- over 54 million -- are led by
married people.

Differences in homeownership may arise because same-sex couples, especially gays, tend to cluster more in cities, where home prices are more expensive and rental units are more plentiful, said Gary Gates, a demographer from the Urban Institute who did the analysis.
For instance, the median property value for a gay couple that owned a home was over $162,000, $25,000 more than the median for lesbian and married couples, and $50,000 more than for opposite sex partners.
Lesbian couples are more likely to have children than gays and are concentrated more in suburbs, where housing is cheaper, Gates said.
About 8 percent of lesbian partners said they had prior military service, compared with 1 percent of women who are married or who are in unmarried partnerships. About 14 percent of gay men had served in the military, about the same as for men in unmarried partnerships but half the rate of married men.
Other states covered in the report were Alabama, Florida, Illinois, Kansas, Maryland, Nebraska, New Jersey, Ohio, Oklahoma, Rhode Island and Wyoming.

ASHLAND, Ore. (AP) -- Students at Southern Oregon University say they will cancel their blood drive this term because many gay men are ineligible.
Guidelines established by the U.S. Food and Drug Administration ban males who have had a homosexual encounter since 1977. Some students say that goes against the university's anti-discrimination policy and falsely labels AIDS and HIV as a gay men's disease.
"I know I've been yelling about it for years," said Daniel Conner, a senior. "I'm a gay man and I don't like being forced to lie to help people."
Amanda Guidero, a student government official, decided not to hold the planned blood drive after hearing complaints.
"It took me four days to decide and I can walk away knowing I made the right decision," Guidero said. "I do believe those students had a legitimate concern."
According to the federal Centers for Disease Control and Prevention, men who have sex with men represent the largest proportion of new HIV infections at 42 percent. Next come heterosexual couples, then intravenous drug users.
Dr. Leslie Holness, medical officer for the division of blood applications for the FDA, said that although the screening process is not ideal, it is continuously reviewed.
Officials are "reluctant to change present guidelines if they seem to be protective," Holness said. "You have to balance how much good you're doing with a safe blood supply with the bad feelings you're stirring in groups of people."

Poll: 6 in 10 Americans OK gay unions

by Christopher Lisotta
Gay.com / PlanetOut.com Network

A May 2003 Gallup poll shows that a majority of adult Americans accept the idea that same-sex relations between consenting adults should be legal and that homosexuality is an acceptable way of life.

Results of the poll show that the concept of legal acceptance for gay relationships has reached the 60 percent level, up from 52 percent last year and 43 percent when Gallup first began asking about homosexuality in 1977. But when it comes to the concept of comparable rights for gay couples as compared to straight married couples, opinion is evenly divided.

Although a majority of Americans have consistently opposed the total concept of "gay marriage," when asked if they favored a law that would "allow homosexual couples to legally form civil unions, giving them some of the legal rights of married couples," the breakdown was 49 percent in favor, 49 percent opposed. In May 2002, when asked the same question, 46 percent were in favor, while 51 percent said they were opposed.

The Human Rights Campaign (HRC), that nation's biggest gay rights group, applauded the results of the survey, and pointed out that many local and state laws do not reflect changing public attitudes.

"In spite of the overwhelming support for equal opportunity in the workplace, it is still legal to fire someone based on their sexuality in 36 states. The time is long overdue for meaningful workplace protections for this country's gay, lesbian, bisexual and transgender community," said HRC Political Director Winnie Stachelberg.

The survey's most dramatic result came from people's attitudes about treatment in hiring. The survey found that almost 9 out of 10 Americans agree that gays and lesbians should have equal rights in terms of job opportunities. In 1977, 56 percent of the people polled felt gay people should have those rights, while in 2003, the number hit 88 percent, up two percentage points from the May 2002 results. When asked if they felt homosexuality was an acceptable lifestyle, a small majority, 54 percent, approved while 43 percent disapproved. This is up from a 34 percent approval rating in 1977.

"What we see here is a steady groundswell of support for gay and lesbian Americans. As more and more gay men and lesbians come out and live their

lives openly, and more Americans realize that gay people are their family, friends, co-workers and community members -- they are better able to understand the issues facing the gay community," said HRC Communications Director and Senior Strategist David M. Smith.

Results of the poll are based on telephone interviews conducted May 5-7 with a national sample of 1,005 adults, with an error of plus or minus three percentage points.

Well, "WE" are invading multiple countries, just like the Nazis
did.

I'm not saying Bush is just like Hilter, but if you have to shove
"Democracy" down people's throats, is it really democracy and
"Freedom"???

Is it really "Freedom" when you bomb the sh** out of an oil-rich
country so you can control it's resources while installing a puppet
government? What about the other dictatorships in countries that
don't have natural oil, how come we don't invade all of them??
$$$$$$$$$$$$$

Is it really "Freedom of Speech" if you are too afraid to
question your government for fear of appearing "Unpatriotic"?

Is Freedom really just about who is the strongest militarily?

Slick

Hi guys,

Got the Scantenna up! It's on a 10 foot mast on top of my tall 2 story house. Probably around 40' off the ground.

My only complaint so far is that I'm getting some fairly loud 'hiss' in the background, especially when listening to the local trunked radio system (800 MHz). I don't have the mast grounded yet, which I'm doing soon (bought an 8' ground rod today). Will the grounding of the mast take care of the hiss?

Also, when I listen to my county's public safety frequencies (traditional, not trunked), the signal is so strong that i have to attenuate the signal to be able to receive it... Otherwise, the background static overpowers the signal.

Any suggestions?

Thanks,

-sam

They have a TRS now?

Last time I was there they were still using the 460 band analog. Sounded like the dispatcher was in a barrel and dead spots everywhere. A real pesky one exists right in downtown Rosamond where the old substation used to be.

I used to DX LAPD from Rosamond, with better results than the local KCSO/FD system. Have they finally ditched the old UHF in favor of a TRS? God I hope so...

Also, can you pull Edwards from where you are? I'd be interested (and I'm sure others would also) in seeing the latest freq's for their TRS. I visit there usually once or twice a year.

<Time for a change@notvailid.com (Hamlet's Soliloquy)> wrote in message news:vcdh1d1fotp4bf@corp.supernews.com...
> If you ever figure out what you're trying to say here, let me know.

Sure. It wasn't directed at you. There's a character who calls himself "That other George" in here who this post was aimed at. He's an odd little duck who applies a rather simple yet biased standard to all scanner products:

Made by Pozilla Software: Bad
Not made by Pozilla Software: Good

Regardless of their track record, he approves or disapproves of a product based on this single condition. He's claimed all sorts of wild things in here, ranging from being a retired "gunship driver" to a "scanner testing" something (not sure what but refers to himself as "we" regularly, which is also quite telling) to "working in government" to "being actively involved in writing consumer legislation".

His latest claim to fame is authoring FEDERAL (whoo hoo) legislation which would require all home based businesses to post their personal addresses and phone numbers if they do business on the internet or face a $10000 a day fine. A look at his website tells all; he's as nutty as a fruitcake - a certified grape nuts flake. I call him NOSPAM, which is what he first called himself in here and on a.b.r.s when I caught him with his pants down begging for a serial # to ARC780. He of course, denies this truth, which makes it so much more fun - for me.

He's an all around idiot and liar. Thankfully for us all, once again, it seems I've sent him scurrying back into his little hole.

Unfortunately, I'm sure he'll return for another spanking. Sigh. You try to raise 'em right, give them all the right books, send them to school, and what do they do? They eat the teacher. Oh well. :-)

Hope that clears it up, sounds like you got your problem resolved? If so, glad to hear it. If not, gee maybe "That other George" will write a law for you. Oh but you'll have to say the magic word for him first: POZILLA.

Why do you want to change the firmware?

In very old PCR-1000s you could remove the US cell phone block with a firmware change, but not on anything built/sold in US in the past 4 or 5 years- they require a hardware change (which is moving some surface mount resistors around.)

Actually, the voice settings for the 250/785 are BAND specific. This sucks because different systems have different settings even though they share the same band. They should have made it BANK specific I think. What's more interesting to note is that my 785 seems to like a DIFFERENT voice setting than my 250 does for the SAME SYSTEM! ARGH!

And yes it's a major pain in the patoot to set because you can't set them in trunked mode either. You gotta lock on to an active freq, pop out of trunk, hold down the 9 key, wait for the stupid screen, and then turn the VFO to adjust. Yuck. Hopefully, you get it there and adjusted before the channel goes dead or you get to start all over again fer chrissakes... WTF Uniden?!

> However according to one display the sound
> quality is already considers about as good as it gets. And its not bad,
> just not as good as the analog transmission.

Keep playing with it. When you get it dialed in just right the sound quality is awesome - no background hiss, and it's like the dispatcher is right there in the room with you. I get the occasional bleeping blooping noises but whenever I do I usually hear "10-9? You went digital on me."
Eeeeeeeexcellent.......

I should add that I spent DAYS of playing with that confounded voice setting...but the results were well worth it.

Now I see, I must say I was thoroughly perplexed. I am still awaiting a return e-mail from Uniden, I suspect that I am waiting in vain.

When I finally get some kind of positive response and explanation of the problem, I'll post the results.

Regards.

IGBO Milwaukee 2005

Milwaukee is bidding to host the International Gay Bowling Organization's 25th Anniversary tournament to be held May 25th - 30th, 2005. The committee is trying to bring 800 to 1,000 bowlers from around the world to the city of Milwaukee for this milestone event. There has been an enormous amount of effort already completed to become a bidding city for this tournament. The committee has already submitted the preliminary and second bid packages to the IGBO Bid Standards committee and will be mailing out the final bid proposal's April 15th. The final decision will be reached in Phoenix this Memorial Day weekend when that city will host the 23rd annual IGBO Tournament. IGBO Representatives and Board Members will be casting their votes at the general membership meeting for either Milwaukee or New Orleans, which has also submitted a bid proposal as well.

Co-directors David Burney, Bill Conklin and Mark Klemme have organized a very talented group of people to assist in the planning and organization of hosting such a tournament. The committee is still looking for volunteers to join us in providing a quality tournament that bowlers have come to expect here in Milwaukee. One does not need to be a bowler to assist the committee; we are looking for varied talents and fields of expertise in order to provide the bowlers and spectators a week of activities outside of the bowling lanes as well.

This event is also going to require a tremendous amount of fund raising and sponsorship from the entire community. With the economy and world situation, the committee realizes that this is going to be an uphill battle, but is confident that the goals can be reached. In order to meet the projected budget, IGBO Milwaukee 2005 is trying to raise over $45,000 before March of 2005. This may sound like an unattainably amount of money, but the impact of 1,000 bowlers to the Milwaukee community will greatly will greatly outweigh the cost of sponsorship and fundraising efforts.

The committee has already begun a bowling pin campaign as a current fundraiser. You my purchase a cut out bowling pin and write your name on it and become a supporter of IGBO Milwaukee 2005. All of the pins sold will be displayed in Phoenix showing the support of the Milwaukee community. Bars will have the opportunity to buy larger pins, which will be displayed in the hospitality suite in Phoenix prior to the voting to show their support to bring the tournament here as well.

If anyone is interested in joining the committee or would like more information, please feel free to send an email to IGBOMILW2005@aol.com or by calling Mark or David at (414) 453-1868. We hope to have great news for the Milwaukee community upon our return from Phoenix, Memorial Day weekend.

-----BEGIN PGP SIGNED MESSAGE-----

RESEARCHERS SEE NO PROBLEMS WHEN U.S. TROOPS FIGHT WITH GAY-FRIENDLY BRITISH

Zero Impact Seen on Combat Capabilities

SANTA BARBARA, CA, May 14, 2003 - Top military analysts this week evaluated the impact of coalition fighting in Iraq among military forces with conflicting policies on gay troops. In interviews conducted by the Center for the Study of Sexual Minorities in the Military (CSSMM), a think tank at the University of California, Santa Barbara, combat experts described the nature of joint operations by coalition forces. Their comments suggested that when U.S. units-which ban openly gay soldiers for fear of undermining unit cohesion-fight with British units which allow gay soldiers, there is no adverse impact on military effectiveness.

Lt. Gen. Gregory S. Newbold, a vice president at the Potomac Institute, said there were instances in the war in Iraq when U.S. and British forces exchanged personnel. In coalition fighting, he explained, the two different armies might provide fire support, air defense, tanks or logistics for one other, as well as translator capabilities and other non-combatant support.

For coalition fighting, the two forces must train together before going into combat. "If you're going to provide combat forces [for each other,]" he explained, "you would absolutely want to train together, and generally we do that." He added that American and British forces "have trained together a great deal, so that relationship is a very easy one to carry into combat."

One of the first American casualties of the Iraqi war was an "exchange officer" who was flying in a Royal Navy Sea King helicopter when it collided with another Sea King over the Persian Gulf. The officer, Thomas Mullen Adams, 27, was part of an exchange program in which American and British forces send soldiers to fly with one another as a way of sharing tactical information. Glenn Truitt, a classmate of Adams' from the Naval Academy and a former submarine officer, said such exchange programs have been in place since World War II. He explained that their purpose is "to make sure we all have the best information" about air tactics, which are constantly being refined and developed.

Mr. Truitt said it was no surprise to him that American soldiers could work effectively with the gay-friendly British military. As a submarine officer, he knew of gay soldiers on his command, and he said their professionalism

rose to even higher levels than that of straight soldiers. "The homosexual men I knew in the military were much more professional about their sexuality than the heterosexuals," he said, "if only because they had to be" to gain full acceptance.

Maj. Gen. Bill Nash (Ret.), a senior fellow at the Council on Foreign Relations, stressed that concerns about the presence of female and openly gay soldiers in fighting units arose less during actual combat than in training. "Most of the issues about women and gays take place when the bullets aren't flying," he said. "When you're fighting, you've got other things on your mind."

His comments seemed to imply that the integration of female and openly gay soldiers into fighting units did not relate to combat performance, but reflected more generalized social concerns: "There are a lot of disciplinary issues that, unless they are directly related to combat performance, are not addressed on the battlefield."

In Congress, U.S. Rep. Martin Meehan, a Massachusetts Democrat, viewed the success of coalition fighting as further proof that allowing known gays to serve in the military does not compromise combat performance. "The adherents to the ban have never been able to produce any evidence that allowing gay men and lesbians to serve openly and honorably would harm the effectiveness of our military," said Meehan, a senior member of the House Armed Services Committee and a leading critic of the military's gay ban. "The Iraq war demonstrates that the morale and cohesion of our forces is simply not affected by the presence of openly gay soldiers."

According to Aaron Belkin, CSSMM's director, twenty-three other nations besides Britain allow gays to serve openly. CSSMM has published extensive studies on four of them: Britain, Israel, Australia and Canada. Researchers concluded that lifting the gay ban had no significant impact on combat capabilities. "The fact that U.S. troops fought successfully right next to British service members who are openly gay and lesbian shows that lifting a gay ban does not undermine military performance," he said.

Safety in numbers
Phoenix Lambda Center gives GLBT people in drug, alcohol recovery a safe space
By Matthew Heil

- ---
- -----

PHOENIX
- From the name, it's not easy to tell what the Phoenix Lambda Center is, or does. The beneficiary of funds raised by Echo's 11th annual swimsuit contest sounds like a gay community center, or office complex.
Basically, it's both. The Phoenix Lambda Center provides a centralized meeting space for 12-step recovery programs serving the gay community. The building's three meeting rooms and kitchen provide a safe, welcoming environment to more than 130 recovery meetings each week, as well as special events associated with those programs.
For those involved with Lambda, the center is more than a place to park themselves during meetings, however. Chuck Helterbrand, who serves on Lambda's board of directors, stresses that finding a place where GLBT individuals with substance abuse problems are welcome isn't just difficult, it is almost impossible. Either the stigma of addiction, or homosexuality, kept Lambda's members on the move before the center opened. Groups met in school cafeterias in the '80s, but when the threat of AIDS hit, they were asked to leave. Later, Lambda's groups met at an abandoned Popsicle factory, but again they had to move.
"We got tired of being kicked out of other places," Helterbrand said.
Finally, in 1991, the Phoenix Lambda Center found a permanent location.
Making a place for all GLBT folks with recovery needs isn't easy, even if it is necessary. As a home for 12-step programs, the Phoenix Lambda Center's main source of funding comes from member donations. These contributions provide about 80 percent of the center's operating needs.
The other 20 percent, barring unexpected expenses, come from outside sources. For that reason, the Echo swimsuit competition will be a real boon to Lambda. Helterbrand said the money will aid in paying rent, utilities, and all the maintenance that is required at the center's location.
Helterbrand recalls how the group ended up in a real fix four years ago, when the air conditioner broke, costing the group thousands of dollars.
Enough donations would make such dilemmas less stressful, and let Lambda provide preventative maintenance. The center could even stay open longer hours.
The Lambda Center has managed wonderfully on volunteer support, too.

The safe space allows 12-step programs to blossom, so that now more than 30,000 participants attend throughout the year. The groups, aligned to GLBT people, make working on recovery easier than it would be otherwise. Helterbrand notes that members don't have to change pronouns in the stories they tell, or worry that coming out will leave them without support. Just as homophobia can drive men and women to drug use to avoid dealing with their sexuality, fear of homophobia can keep them from recovery.
"Being gay doesn't cause addiction, but it does affect it, because you have to hide," Helterbrand adds.
For more information about the Phoenix Lambda Center, visit http://members.cox.net/phxlambda.

Point taken. I had not read the Article VI that way before. But
it raises a very important, and unanswered question: What happens if
a Treaty contradicts the U.S. Constitution? One would think the
Constitution would ultimately win out since it is the body which
gives any substance to treaties anyway.

The US Government has a long history of basing it's following of any treaty it is a signitory to only on the basis of expediency. Ask any Native American... and the latest example of this phenomenon is the recent scrapping of the nuclear arms limitation treaty. At least they were forthright enough not to sign on to the Kyoto accords, since we would have broken them anyway.

Not sure what the hiss might be unless you're scanner is getting
overloaded? What type of scanner are you using?

> time one of those shits tries another homicidal bombing, Israel
> can officially declare war on another on them because they would
> be another country.

ya.......of course since Sharon doesn't want peace and will never hive the
Palistinians a just independance - your point is irrelivant.

of course if they had their nation - there would be no "homicidal"
bombings anyway dipshit.

Gay journalists' association regroups
By Brent Dorian Carpenter

DETROIT - Matthew Helms, a 31-year old openly gay writer at the Oakland County Free Press office, has re-launched the Detroit chapter of the National Lesbian and Gay Journalists Association. At its height in the mid-1990s, the group boasted 50 members across the state. The Detroit newspaper strike caused the group to fall into disarray.

Responsible for covering roads, construction issues and suburban governments in Oakland County, Helms spoke to Between The Lines about challenges faced by gay journalists at mainstream media outlets and of his hopes for a revitalized local NLGJA chapter.

BTL: What is the National Lesbian and Gay Journalists Association?

MH: It's a group of lgbt people who work in the media. It was formed [in 1990] to encourage a number of improvements in industry, including professional growth and respect for lgbt workers in the industry, fair and accurate coverage of lgbt issues and mentorship to future journalists.

BTL: What are the benefits of membership with the national organization?

MH: The group offers professional development and mentoring, networking opportunities, access to email listservs, online resources, job fairs, a members-only job board on the NLGJA Web site, a quarterly newsletter called NLGJA Outlook and discounted rates to attend national NLGJA conventions. Plus we have a snazzy sports cap that says: "We're here, we're queer, we're on deadline."

BTL: What can you tell me about the original Michigan chapter?

MH: A number of people who worked in newspapers, TV, radio and related organizations had a strong Michigan chapter in the mid-1990s. One of the most successful events it hosted was a public "Meet the Media" night in which editors and others from major newspapers, radio and TV networks answered questions from roughly 300 members of the lgbt community.

BTL: What do you hope to accomplish with this new iteration of the group?

MH: We hope to revitalize the group and provide a supportive environment for lgbt people who work in Michigan media. Some of us may be the sole lgbt person in our workplaces. Eventually, we also hope to host activities that will encourage interaction between news organizations and the lgbt public to make sure our community is represented fairly and accurately in the

news.

BTL: Why is there a need for an organization like this one?

MH: While there have been great gains made in the way mainstream media cover gay issues, there are still instances where news outlets let false or misleading perceptions slip out unchallenged. We are a diverse community racially, economically and politically, and we are regular folks, too. Too often this is left out of the news in favor of sensational or controversial topics.

BTL: How much influence and/or opportunity do you have in incorporating gay topics into the mainstream stories you write?

MH: The topics and areas I cover don't always lend themselves to coverage of lgbt issues, per se. But working in our Oakland County newsroom in Royal Oak, I fairly regularly suggest story ideas to colleagues and help coworkers who have questions about gay issues.

BTL: Whom do you hope to attract to the revived group?

MH: Though we are primarily working journalists, anyone may join. There are membership levels for people who work in related fields such as advertising and public relations and for others, "friends of the NLGJA," who may simply care that the media represents us fairly. So far, all sorts of people have shown up, reporters, editors and others from daily newspapers and TV and radio stations in Detroit, Ann Arbor and elsewhere.

813. Houston-Hunks Pounding the Pepperoni--The Ins and Outs of Gay Sex

Newsgroup: rec.radio.scanner
Date: 2003-05-20 02:09:17 UTC

After reading your section on the Web site, I do thank you for your advice. It seems that I might as well not have sex at all when considering the risks. I am a 29-year-old male, and in 14 years I have had sex only twice. On one occasion about two years ago I performed oral sex on a friend. Since then, I have tested negative for HIV. I have not had sex since. Currently I take Lamisil to treat some fungus infection concerning my nails. I read the side effects on the box, but the sensation of a ☐tight throat☐ is not mentioned. Could this be a symptom for some STD? I have no trouble when eating, and it is not the typical sore throat. It is just a tight feeling.
☐Raul
It does not sound like your tight throat is related to a STD or the medication you take. It comes through loud and clear in your letter that you are very frightened of having or catching a STD from sex. I write my column both on this site and at www.gayhealth.com not to scare people from having sex but to empower them with knowledge so they understand risks and treatments. If you get a STD, it should be treated. Don☐t use fear of STDs as an excuse to keep from having sex.

Some men see HIV as a punishment for being gay. I don☐t know if this is how you feel, but this is a terrible and very wrong way to feel. Some men also believe that if they have sex with other men, they will definitely catch HIV. This is also not true: Many HIV-negative men have loving and sexually satisfying relationships with other men and don☐t catch the virus. Yes, they must be careful and have protected sex, but it is definitely possible.

I urge you to see a good doctor or STD clinic and ask for a gonorrhea, chlamydia, and herpes throat culture. You should also get a syphilis test and HIV test. While you don☐t have to mention that you have had oral sex with a man (some men catch STDs or HIV from oral sex with women), I believe honesty with your doctor is best. If the cultures are negative, then you know you don☐t have an STD. I know you might be too frightened to go for the tests, but this is obviously on your mind. It is better to know for sure than to continue worrying. And remember that STDs are treatable, and most are curable.

In addition to getting tested for STDs, I hope you will talk to a therapist about the fears that keep you from having sex. At 29 you should have sex☐you don☐t have to be promiscuous, but sexual fulfillment is a vital part of life. You are too young to toss that part of you away. STDs are not a ☐gay thing☐: Many heterosexuals catch these infections as well. In fact, I believe that in this day and age it may be impossible to have a healthy sex life, gay or straight, and avoid all risk of an STD. You can certainly avoid HIV if you have protected sex, but other STDs (like HPV, a.k.a.

genital warts) may be unavoidable. The key is to not let fear keep you from sex. Know the risks and symptoms, and get treated if you have a problem.

I am 18, male, a nonsmoker and nondrinker, but I have lost all ability to gain an erection. The most I can achieve is about half the size, and it□s still mostly limp. It□s been two weeks since my last erection, which leads to my question: I used a dildo on myself anally for the first time on that last masturbation with a full erection. Since then, I have masturbated and ejaculated unintentionally in the flaccid state while trying to gain an erection. I know this is bad, and I want to know if there was any possible damage done to me through using the dildo and if this has been heard of before. □ Brian

Let me put your mind at ease immediately: You did not injure yourself with the dildo, and this problem of not being able to have an erection does happen. Now that you feel better, I hope, let□s delve into your problem and examine causes and a solution. Men can injure themselves with a dildo, but it usually occurs in the anus or rectum. They can notice pain or bleeding as well as signs that the delicate lining of the anus and rectum is torn or the muscle has gone into spasm. As long as the dildo is comfortable and you insert it with constant gentle pressure, you should not harm yourself. Clearly, if you feel pain or notice blood, stop. A dildo, even if forcibly inserted, will not damage the nerves that control erection.

Your letter points out a very interesting phenomenon: that orgasm, erection, and even ejaculation are three very separate functions. While usually they go together, you can have an orgasm without an erection□or even without ejaculation. Medically speaking, the three events may occur separately or in any combination. When someone experiences sexual dysfunction, it is important to determine whether it is physiological or psychological. When a young man suddenly develops inability to achieve an erection, it is most likely related to psychological stress. Clearly, medical conditions such as diabetes, blocked arteries, and other diseases can produce this problem, but onset is usually gradual and seen in older men. You might have some sort of uneasiness over the fact that you used a dildo. Some men find that using a dildo makes them really confront their sexuality, as anal stimulation is often incorrectly associated as a □gay-only□ kind of pleasure. (Believe me when I tell you: Straight men can be into it too.)

I think your problem will correct itself with time. Try and stimulate yourself visually (a movie or magazine). If you get an erection when you wake up in the morning, try and masturbate then. Some men find that Viagra will help them achieve an erection and get them beyond their difficulties. Once you see you can have an erection, the anxiety lessens and you won□t need Viagra anymore. If the problem isn□t getting better and, especially, if you don□t have a morning erection, see an urologist. Simple tests can be done to be sure that the problem is not physiological. An urologist can also give you a prescription for Viagra.

I was diagnosed over a decade ago with a mild case of ulcerative colitis. It is under control with medication. A few years ago during sex my partner entered my rectum with a little too much force and I reflexively clinched. When he withdrew there was lots of blood from my rectal area. Since then I have never been the same; I haven□t been a bottom since. Even when I have a formed bowel movement, it hurts and often causes bleeding. I have asked my gastrointestinal doctor about this recently, and he told me I have a fissure. He said that with time it will heal. It□s been three years, and it still hurts and bleeds. I wonder if it is directly related to the colitis and if there□s anything I can do about it. I would like to be a bottom again, but it□s just too painful. Even when my partner enters me with his fingers, it sometimes causes bleeding. What can I do to get my bottom to heal and become a bottom again? □Alan K.

Ulcerative colitis can be a debilitating inflammation of the colon, and you are fortunate in that you have a mild case. As you are well aware, I am sure, some people with ulcerative colitis need to have surgery to remove the diseased portion of the colon. There is also an increased risk of colon cancer in people who have ulcerative colitis for more than 10 years. It sounds like you do have a fissure that may have occurred during anal sex. I assure you, however, that fissures in men with colitis can occur even without sex: They can be related to the colitis or bowel movements. The colitis can make the lining of your colon so irritated that it just tears. You might feel the tear and think that it is because your partner entered you too forcefully, when in fact, it simply happened. I urge you to talk about this with your partner so neither of you feel guilty or blamed for your problem.

Getting your colitis under control is the most important step in promoting the fissure to heal. Diarrhea can be just as damaging as hard bowel movements to the torn tissue of the anus. Your doctor must also look inside to be sure that you do have a fissure and not some other problem that may or may not be related to the colitis. A biopsy is very important to check for precancerous changes in your colon.

If you do have a fissure, then it should have healed within three years. Your doctor might need to prescribe a cortisone suppository or an enema like Rowasa to help promote healing. Stool softeners and fiber agents are very important to make your bowel movements less traumatic. Nitroglycerin ointment also might help the fissure heal. If your doctor is unfamiliar with these medications or if you want another opinion, you could see a colon and rectal surgeon. However, just because they have the name surgeon doesn□t mean they will want to operate□you can look for a list of gay or gay-friendly physicians on www.gayhealth.com or www.glama.org. If your problem does not heal with medical treatment and if your colitis is quiet, then surgery might be the best option. Sometimes, surgically removing the torn, inflamed tissue can be enough to promote healing. A specialist will advise you.

Last but not least, I am sorry to say that you may not be able to have receptive anal sex again. Some people with ulcerative colitis have too much inflammation and will always tear. If you do heal, then be very careful

when you attempt anal sex. Go slow, and stop if you feel pain or bleeding. A small dildo should always be tried first to test for comfort before you move on to the real thing.

I hope this helps, and I don☐t mean to discourage you. Please don☐t let the doctor tell you month after month that it will heal, because sometimes it doesn☐t. While surgery is not a pleasant thought, it could get rid of your fissure.

I am perhaps six to eight months into a case of Peyronie☐s disease [which is characterized by a plaque, or hard lump, that forms on the penis]. My urologist has prescribed Verapamil ointment twice a day, and I can☐t tell whether there is any effect or if it would be much worse had I not begun this regimen. It☐s not improving: The inflammation forms about a 30- or 40-degree asymmetrical bend along the length of the penis and to the left, and it has three or four plaques and three or four visible dents. The only change I think I see since starting the ointment is a minimal reduction in tenderness. It☐s basically repulsive, yet my urologist believes my case is in the less-severe category. As a pathologist I have access to lots of literature, and I realize there are no reliable remedies. I☐ve read that Verapamil injections have had some limited success, and that when one☐s case is stabilized, curvature can be lessened by a plication procedure described by Tom Lue at University of California, San Francisco. My question to you is: Do you know of any gay urologists with a good reputation in the Bay Area (or elsewhere) who may be experienced with Peyronie☐s disease? ☐E.C.
I discussed your problem with Franklin Lowe, MD, a very gay-friendly urologist in New York City who has been of invaluable help to me over the years. Dr. Lowe agrees that the Verapamil will probably not work. He advised Vitamin E (400 milligrams daily) and Potaba. Potaba requires taking 12 grams a day, which amounts to 24 tablets. He also told me that Tom Lue, MD, in San Francisco is one of the foremost experts on Peyronie☐s disease I urge you to see him.

In reference to ☐Bill,☐ the man with two daughters, I just want to lend a helpful hand by saying that sending them back to their mother just because he finds a male friend is not the right thing to do. That will just make them think that he doesn☐t love them or have enough love to share with them and another man. They will never recover from that. If he finds that they are having a rough time with it, then therapy should be considered. Never, never, never let your children think that you do not love them or that you cannot love them and someone else too. That will only hurt them and you and your ex-wife. They will think that if she finds someone else also, they will not be welcome to see her either. That is not the image that you want to show them.

There is a section in the public library in my hometown that has age-appropriate books on gay parenting. This is a great idea for all parents, not just gay ones. I found that these books were very helpful when I got divorced and retained the custody of my daughter. She was a little

bit older than Bill☐s girls, but she was still going through a lot of new things. The divorce in itself was a pretty big change compounded by living in a new home without the mom. The school was very helpful to me also.

Regardless of the issues at hand, I was completely open and honest with my daughter, and I always reassured her of my love for her. You might also be surprised at how tolerant many of the neighbors and parents of friends may be: I only received a very few negative reactions, and my daughter came to realize that those of her friends whose parents had problems with the situation were not really good friends to her anyway. I wish Bill the best of luck with everything, including finding a soul mate and living with that love and his children☐s. He just might be surprised to find out that his new love interest may also have children of his own. ☐Jake

In a recent response to a gay man who has two young daughters, you wrote, ☐If [your wife] reinforces the fact that homosexuality is not a choice but a legitimate lifestyle, then your children will have a much easier time adjusting.☐ I would ask that you reconsider the use of the term lifestyle to describe homosexuality. While it is a common term today, it has come to be associated with choice, including ones with negative implications such as drug use, promiscuity, bar-going, etc. It is all too often the term of choice for our fundamentalist religious foes. I expect to hear it from them but am dismayed when I hear other gays and lesbians repeat it. Thank you for your time and for the opportunity to express my opinion. ☐Justin

Local news briefs
Ford's Allan Gilmour receives national business award

PHILADELPHIA - Allan Gilmour, the openly gay Vice Chair and CFO of Ford Motor Company, has received the Distinguished Business Leadership Award from the National Gay & Lesbian Chamber of Commerce (NGLCC).

"We applaud Allan for his remarkable achievements and dedication to the lgbt community," said Chance Mitchell, an NGLCC co-founder.

The NGLCC co-hosted the International Business Colloquium Panel at the 2003 Equality Forum this past weekend in Philadelphia, Pa.

Dancin' in a church
SOUTHFIELD - Northwest Unitarian Universalist Church will hold a welcoming congregation dance for lgbt folks and friends on Saturday, May 17 from 8 p.m. to midnight.

The event will be alcohol and smoke free, with soft drinks and snacks provided.

Admission is $10 per person at the door. The church is located at 23925 Northwestern Highway in Southfield.

For more info email derp98@yahoo.com

U of M scholarship opportunities
ANN ARBOR - Two scholarship opportunities are open to advocates, activists, women and hell-raisers through the University of Michigan.

The James Neubacher award is given to someone raises awareness, access, acceptance and full participation and is making significant contributions in society for people with disabilities.

The award includes a stipend provided by the Office of the President, and the nominating process is open to faculty, staff, students, or alumna/alumnus of the University.

The Neubacher nomination deadline is Saturday, May 31. For more information, visit www.umich.edu/~hraa/neubacher.

The second opportunity is in scholarships for women returning to school. Offered by the U of M Center for the Education of Women, these are given at the graduate, professional and undergraduate levels to women whose education has been interrupted. There are various scholarships available, ranging from $1,500 to $6,500.

The interruption in education must be for at least a) 48 consecutive months or b) a total of 55 months, not counting interruptions of less than 12 months.

As the first step in applying, you should submit an explanation of your circumstances in writing for an evaluation by the eligibility committee PRIOR to submitting an application.

For more information, visit www.umich.edu/~cew or call CEW at (734) 998-7699.

Volunteers needed for Womyn Everywhere Megapicnic
BRIGHTON - Once again the Womyn Everywhere Collective is looking for volunteers to help out at the July 12 picnic. There are two jobs we need volunteers to fill: (1) Greeters, who are responsible for greeting all women arriving at the picnic, giving out free WE raffle tickets and picnic information pamphlets, managing the parking lot, etc.; and (2) Welcome Table workers, who are responsible for overseeing all activities at the welcome table (i.e., collecting WE raffle tickets, selling WE stuff, collecting $1 donation from all picnic participants, registering volunteers, giving out name badges, etc).

Shift times start at 10:30 a.m. and go until 6 p.m.

If you are interested in helping out please contact one of the WE Volunteer Coordinators: Carole (hootiepd@aol.com) or Nicole (nicpittman@yahoo.com). Please indicate if you would prefer to work before or after 1:30 p.m. and if you have a preference for working as a greeter or at the welcome table.

For information on the WE Picnic go to
http://www.geocities.com/womyneverywhere

New group looks for more members
CLAWSON - After founding the Suburban Lesbians of Michigan online group in September 2002, Kelly Leszczynski said that more than 180 members have already signed up.

She manages a website at http://hometown.aol.com/suburbanlesbian/org.html, geared towards creating a social avenue for Michigan lesbians to meet each other.

The group holds monthly social events and is in the process of planning charity events.

"One of our main goals is to give back to the community in as many ways as we can," said Leszczynski.

SLOM is meant to be a place where women of all ages can gather, talk, and share, she said.

"A place where we can be ourselves and be respected for doing so," she added. The group works to set up events like going to bars/clubs, having dinner, and just gathering in a neutral atmosphere.

Ferndale honors gay-friendly FANS
By Sharon Gittleman

FERNDALE - A Ferndale husband and wife active in lgbt rights campaigns have been named "Citizens of the Year" by a city civic group.

Joann and Dick Willcock were nominated for the award by Ferndale City Council member Craig Covey and Ferndale Mayor Robert Porter.

A plaque and proclamation was presented to the couple by Lodge 1588 of the Elks Club on April 26.

"Those two have a long history of volunteerism in Ferndale, in a wide variety of causes," Covey said. "They work on the Blues Festival which raises money for charity. They've worked on the Dream Cruise for five years."

But the couple have also devoted their time to a number of causes dear to the lgbt community, including the 1999 campaign to pass a human rights ordinance in the city and the Michigan AIDS Prevention Project.

Joann Willcock serves on the board of Friends and Neighbors of Ferndale, a gay and lesbian community organization.

"I am so pleased they won," said Ann Heler, FANS' president. "They are Ferndalian cheerleaders. They support the city and have lived here all their lives. If you need them, they are there wholeheartedly. They are humble, helpful and kind. You'd want them to be your neighbors."

Joann Willcock was the co-chair of Ferndale's failed campaign to pass a human rights ordinance in the city in 1999. "I also worked on the ad hoc committee that that studied the ordinance. My husband worked on the campaign as well," she said.

Willcock said she was initially undecided about the proposed ordinance, but that testimony she heard convinced her the ordinance was needed.

"One young man I spoke to was trying to get a job in a restaurant in Ferndale and he was told he was too gay to work there. There was another incident we knew of. Someone was denied seating in a restaurant because he had children of color," she said.

"I have a friend who has a store that was egged because they were gay. It angered me that someone could be treated that way. It opened my eyes."

Willcock said volunteering to help gay people and others in her neighborhood was "the right thing to do."

"I hate to say somebody has to do it, but that's the way it is," she said. "Everybody should be treated with respect and dignity, and I have seen very often the gay population has not been treated with that respect and dignity."

Willcock said she was speechless when she learned about the award.

"We were quite surprised and honored to be nominated," she said.

"It's something I never expected," agreed Dick Willcock. "We were just trying to make our community a better place to live."

Willcock has lived 37 years in Ferndale, a community he describes as a "a small town inside a large metropolitan area where everybody knows everybody and everybody pitches in."

While neither he nor his wife is gay, Willcock felt compelled to help his lgbt friends and neighbors.

"I think it's somewhat better for gay people, but we still have a long way to go," he said. "We had a neighbor - somebody scratched 'fag' in the hood of his car last year. We tried to give him as much support as possible and directed him how to file reports."

Willcock said he thought there would have been more tolerance in his "diversified neighborhood."

"We've been very fortunate this year that there were no hate crimes reported," he said. "Hopefully, we can go through the whole year like that."

Joann Willcock said she's seen a tenfold improvement in community acceptance over the past five years. And her husband holds even higher hopes for the future.

"I'd like to see everyone treated equally," he said.

816. Houston-Hunks Pounding the Pepperoni--Graduates walk out on Santorum after Anti Gay Remarks

Graduates walk out on Santorum
Approximately one eighth of the graduating seniors at Philadelphia's Saint Joseph's University walked out of commencement ceremonies on Sunday as U.S. senator Rick Santorum (R-Pa.), who recently infuriated gay rights groups and others with derogatory remarks about homosexuality, prepared to deliver the keynote address. About 100 graduates got up and walked out--amid competing boos and applause--when students were given an opportunity to leave "nondisruptively" before Santorum was introduced to receive an honorary degree and make his speech. Santorum didn't make any reference to the walkout or the controversy directly. "We are all called to love one another, even people we disagree with, even people who hate us for what we believe," he said.

Some students had urged the Jesuit university to rescind Santorum's invitation after he likened gay behavior to bigamy, polygamy, incest, and adultery in an April 7 interview with the Associated Press. "Senator Santorum and I are at completely opposite ends of the spectrum," said Saint Joseph graduate Sara Foglesong, who was among those who walked out. "I am not incestuous. I am not a bigamist. I just happen to be bisexual. It offended me."

The commencement also drew about two dozen protesters to a nearby street corner. "He represents homophobia, [which] I don't believe is a value based on Christian love," said demonstrator Malcolm Lazin, executive director of Equality Forum, a Philadelphia-based gay and lesbian group. "Homophobia encourages hate crimes, and Senator Santorum needs to be held responsible for that."

Patrick Hamilton, a 1996 graduate of Saint Joseph's, said he was "disappointed" that the university had invited Santorum: "Saint Joseph's has always been known as a conservative university, but they've made a lot of strides in being more tolerant and accepting of gays and lesbians."

Motor City Pride set to ride
By Brent Dorian Carpenter

DETROIT - Despite recent concern surrounding outstanding debts to the City of Ferndale, organizers of Motor City Pride are giving assurances that the event is caught up on its delinquent bills and that all the plans are in place for this year's celebration.

Jeffery Montgomery, Executive Director of Triangle Foundation, which took over the hosting reins of Motor City Pride two years ago, explained that - although the problem has now been resolved - the delinquent bills problem was really a debate over whether MCP should have been charged for certain city services.

"It's an extremely expensive event to produce," Montgomery said. "Obviously, we're trying to save as much money as possible. There were things that were negotiable about what we should have to pay for."

Montgomery said this year's deposit was paid early, a clear sign that the organization's ties to city management in Ferndale are in good standing.

Tom Barwyn, Ferndale's City Manager, stated his unequivocal support for Pride. He said that, but for one or two vocal protesters, he has seen strong community backing for the event. He said Pride permits should sail easily through the City Council hearing process.

"It's been well run, well attended," he said. "I don't anticipate any problems. We've had a great relationship and I hope it stays."

Openly gay Ferndale Councilman Craig Covey echoed the sentiment, saying, "We're glad Motor City Pride is here and the city and the council has a good relationship with Triangle."

2003 marks the third year the annual Pride celebration will be located in downtown Ferndale. According to Montgomery, last year's event attracted more than 15,000 people. He said they are anticipating as many as 20,000 this year.

"We want to expand, and the city has worked well with us," he said. "I think Kevin [McAlpine] and Jay [Lippy] have done a really great job holding down costs and attracting sponsorship."

McAlpine, Triangle's Director of Development, recently released a $50,000 operating budget for Motor City Pride. Roughly 40 percent of that, or $20,000, comes from corporate sponsors; another $15,000 from vendor fees; $5,000 from donors; and the remaining $10,000 is listed as donated by

"other."

"The first year we lost a small amount of money," McAlpine said. "Not a significant amount. The second year we broke even. This year we look like we may clear a small profit."

Michael Larry, the past producer of Pridefest (when it was located in Royal Oak and before its name changed), says he is disturbed by the direction the event has taken. He criticizes the late payment of the debt, and questions if Triangle is spreading itself too thin with its various ventures unrelated to victim advocacy.

"Before, the bills were paid in advance or at least 30 days after the event," he said. "This has nothing to do with a gay issue. It's a matter of trust, especially since they are trying to come back. It reflects badly on the entire community. They should not be focused on entertainment. With the Comedy Fest, the Film Festival and Pride, they risk collapse."

Montgomery admits that, like any organization dependent upon donations and fundraising, Triangle's fortunes ebb and flow.

"We don't have an elaborate system for accounting here," he said. "We have money and then we don't have money (laugh)."

Gay TV
by Gay Boy Ric (5/14/2003)

DAWSON☐S CREEK SERIES FINALE

Wed., May 14 WB, 7-9 p.m.

Set five years in the future, Dawson, Joey, Pacey and Jen return to Capeside to attend a wedding. Dawson has been living in L.A., producing his autobiographical TV series The Creek, but has never forgotten the love of his life. Joey is a successful book editor living in New York with her boyfriend (Jeremy Sisto). Pacey is the owner of the new Ice House and still carries a torch for Joey. Jen is a single mom living with Grams and managing an art gallery in Soho. While Jack ... Jack has become a teacher at Capeside High and has fallen in love with a secretly gay man! Promos hint that one of the four main characters dies in the episode ☐ (since Jack is considered Character No. 5, he☐s safe). The series finale was co-scripted by out show creator Kevin Williamson ... no wonder Jack lives!

WEDNESDAY, MAY 14

ALL MY CHILDREN (ABC, noon) The cat☐s out of the bag ... Bianca now knows that Lena was secretly working for Enchantment☐s competition☐and was ordered to befriend Bianca in order to steal Enchantment☐s anti-aging formula. But Lena tells her that her love for Bianca is real ... and Bianca forgives her.

ELLEN ON PRIMETIME GLICK (COM, 9:30 p.m.)

SEAN HAYES ON LETTERMAN (CBS, 10:35 p.m.)

THURSDAY, MAY 15

WILL AND GRACE (NBC, 8:15 p.m) Season Finale: The gang sets sail on Stanley☐s yacht to scatter his ashes at sea. But as Jack and Will frolic, Grace frets because hubby, Leo (Harry Connick Jr.), is keeping company with a very seductive M.D. (Nicollette Sheridan) while on a medical assignment in Guatemala. Minnie Driver and Deborah Harry guest star.

E. R. (NBC, 9 p.m.) Season Finale: Carter joins Kovac on a relief mission in war-torn Africa. With Laura Innes as lesbian Dr. Kerry Weaver.

SEX 2K: GAY CRUISES (MTV, 9 p.m.)

FRIDAY, MAY 16

MARIO CANTONE: COMEDY CENTRAL PRESENTS (COM, 10:30 p.m.) Also Saturday at 7 p.m.

BETTE MIDLER ON CAROLINE RHEA (Ch. 6, 4 a.m.)

SATURDAY, MAY 17

SEX 2K: GAY CRUISES (MTV, 5 p.m.) 100 PERCENT NYC: TRIBECA FILM FESTIVAL CONCERT (MTV and VH1, 7 p.m.) Mario Cantone and Whoopi Goldberg are among the performers.

SUNDAY, MAY 18

SIX FEET UNDER (HBO, 8 p.m.) David and Keith navigate troubled waters in their relationship.

HITLER: THE RISE OF EVIL (CBS, 7 p.m.) Part 1: Robert Carlyle (THE FULL MONTY) plays Hitler in this new dramatization of how the young Hitler rose to power in pre-WW II Germany. Peter Stormare plays the Ernst Roehm, one of Hitler□s closest early allies and the thuggish leader of the ultra-violent S.A. (Storm Troopers), also known as the Brown Shirts. Although Roehm is now known to have been gay, his sexuality is not portrayed until Tuesday□s Part 2, when a disaffected Hitler□ having decided to order Roehm killed□walks in on Roehm and a young blonde lover in bed.

THE MATTHEW SHEPARD STORY (Bravo, 8 p.m., 1a.m.) Repeat: As Matthew Shepard□s parents (Sam Waterston and Stockard Channing) deliberate whether to recommend the death penalty for their son□s killer, flashbacks recall Matthew□s life and tragic. Matthew: Shane Meier. Originally an NBC TV Movie.

QUEER AS FOLK (SHO, 9 p.m.) Melanie has trouble adjusting to Michael□s need to be an involved father-to-be.

TUESDAY, MAY 20

HITLER: THE RISE OF EVIL (CBS, 7 p.m.) Part 2: As he prepares to order Ernst Rohm (Peter Stormare) killed, Hitler walks in on Rohm and a young blonde lover in bed.

BUFFY THE VAMPIRE SLAYER (UPN, 7 p.m) Series Finale: Buffy meets her destiny when she leads the Scoobies, the Potentials and Angel into the Hellmouth for a final showdown with the First. With Alyson Hannigan as teen lesbian witch Willow.

NYPD BLUE (ABC, 9 p.m.) Season Finale. With Bill Brochtrup as the precinct□s gay receptionist John Irvin.

Final confrontation forces couple out of state
Taylor couple looks forward to moments of peace
By Kelly Peters

TAYLOR - Since October 2002, Amy Larcom and her partner, Karen Vauris, have put up with constant verbal harassment and torment from their neighbor, Derek McDonagh.

Their next and hopefully last trial is scheduled for 1 p.m. on May 13 in the Wayne County 23rd Judicial Court. Then, Larcom and Vauris are moving south to Missouri, to live with Larcom's mother until they reestablish themselves and find some peace of mind.

"I can't believe this whole mess," Larcom said. "All I know is that we intend to go to court against Derek for everything he has done to us. I am a wreck and we just want to pursue a new life somewhere else. It's terrible when you are pushed out of your own home. Is this America or is this a terrorist state?"

The couple's troubles started last October after Larcom's sister, who was visiting from out of town, reprimanded two kids for playing ball so close to her car. The two kids were linked with McDonagh. After that, McDonagh set out on a seven-month tirade of fence dismantling and verbal harassment, sending the two women to seek help from whomever they could.

After contacting the Triangle Foundation, the City of Taylor Police Department and an attorney, the couple had their day in court on Jan. 21, 2003.

At the pre-trial conference, McDonagh pleaded "no contest" to charges of harassment and the imposition of 12 months of unsupervised probation.

But, according to Wayne County prosecutor Peter Schwartz, a judge subsequently refused to accept McDonagh's plea or the condition of unsupervised probation, and rescheduled another hearing on Feb. 4.

McDonagh's punishment went from 12 months to six months of unsupervised probation; he was given 21 days to resurrect the fence between the properties.

"McDonagh obtained an attorney, and I had met with him and said I would consider dismissal of the charges, if after six months there had been no problems between the two neighbors," Schwartz said.

He said he then found out that McDonagh was still harassing the couple, and he forgot about the dismissal charges.

On April 27, according Larcom, McDonagh took down the fence he had just replaced in February.

"I guess these women can't get any peace without putting him on trial," said Schwartz. "I thought the threat of a trial would calm this guy down, but it doesn't appear to have worked out that way. We are going to go ahead with the trial."

On May 2, the couple hired a fence company to come in and replace the fence themselves. The task proved impossible because McDonagh had sawed down the fence posts into the ground.

Even though they now have plans to move away from McDonagh, and has sold their house, the couple has fears about the time remaining in Taylor.

"We know that we will be having problems with him again because we will be moving and it will be his last chance to do something to us," Larcom said.

The couple will go back to court, and their supporters are hoping that McDonagh will finally get a formal charge and some jail time for violating his probation.

"This guy has no respect for the law," said Crystal Witt, victim advocate for the Triangle Foundation. "Hopefully, his violation of his probation will get him incarcerated."

The City of Taylor has a harassment clause in its city charter that states: "It shall be unlawful for any person with intent to harass, annoy or alarm another person to: (1) Follow a person in or about a public place; or (2) Engage in a course of conduct or repeatedly commit acts that alarm or seriously annoy another person and that serve no legitimate purpose."

As of press time, Detective Jim Martin of the City of Taylor Police Department did not return phone calls.

A fence dispute 11 years ago led to the deaths of two former board members of the Affirmations Lesbian-Gay Community Center: Susan Pittman and Christine Puckett. The two lived in a rural Huron Township home and were shot to death in their front yard in May 1992 by their neighbor, Jim Brooks, as Puckett tried to resurrect a fence between the properties.

820. Houston-Hunks Pounding the Pepperoni--Gays go to prom

I learned the truth at 17
Our high school senior correspondent reaches a crossroads: If he takes another guy to the prom, is he doing it for himself, or just to fulfill an image of ☐gay teen☐ that☐s taking over his life?
By Paul Chandler
An Advocate.com exclusive posted April 9, 2003

A few weeks ago I was contemplating taking out an ad that read, ☐Emergency! Need gay male prom date. Respond immediately.☐

Every time spring rolls in, prom fever hits. Who am I going to go with? Where do we go to eat? What about afterward? Do we really want to go to ☐after-prom☐? What group should we travel with? Is it really that important? Do we really have to go to that downtown French restaurant? Finally, the last one: Do I really have to go with a guy?

About six months ago I went to homecoming with my friend John. It was the first time in the school☐s history that a male couple went to a school dance. While I had a lot of fun, it wasn☐t as fun as it could have been.

The music wasn☐t too bad (though at school dances one can only expect so much). Even the personal drama I had with one of my best friends wasn☐t the reason for the damper. Now that I look back on it, I think it was because I felt pressure to be something that I wasn☐t. Maybe it☐s been that way all along.

I felt like I had to make a statement. One of the T-shirts I wear says, ☐W.E. We☐re EVERYWHERE,☐ and that☐s what I wanted to show everyone. I wasn☐t going to sit down and take it. I wanted to show them that we are right there, listening to the ☐Oh, that☐s so gay☐ and the ☐God, that guy☐s a fag☐ every day, every single hour. We are their best friends, their siblings, their parents. We aren☐t going to be faceless anymore.

When John told me he might dress in drag, I figured that if one face was that of a drag queen, all the better. This is one extreme: Learn it. Accept this and you☐ll accept everything. I was going to shove it down their throats and make them feel what society continues to do to us. ☐I did a cheerleader in the bathroom.☐ Yeah? Well, my friend participates in an open relationship. There☐s a park downtown where some people go for anonymous sex. We☐re not all like this, but for every one of your extremes, we☐ve got one too. We☐re right down in the dirt with you, no better, no worse, same exact proportion, same exact problems.

It was like all the times in the closet when I had been pressured to say, ☐Oh, yeah, that girl☐s so fine☐ were coming back and working backward Now

I felt I had to offer a loud ☐That boy is hella hot!☐ I had to be a rooftop yeller. I had to be the Gay Guy. I☐ve heard that this is overcompensation And now I can say yep, that was me.

My justification was that a demonstrated fact can destroy an existing stereotype when the two cannot coexist. A woman cannot be inferior and intelligent☐we know intelligent women, so women are not inferior. A fag cannot be an athlete☐I am an athlete, so fags can indeed be athletic. Once someone proves an assumption wrong, I figured, the whole belief system crumbles. The weak were the ones who succumbed to compromise; the brave prevailed.

But as the year progresses, I see I☐ve made a fatal error. The positive truths about a person do not necessarily obliterate the negative assumptions. One person told it to me this way: ☐If you see a basketball player who is amazing, you cheer for him. If you find out he☐s gay, you might still cheer for him, but only for that nonexistent part of him which is straight.☐ In other words, if you hate fags, you grant that this one person is an exception who☐s more like straight people, and you can still believe that all other fags can☐t be athletes. Simple as that.

And if you put yourself out there as only gay? Is that good enough to erase other people☐s negative attitudes?

I know now, it☐s not.

I thought I lived and worked for the day when high schoolers wouldn☐t care when someone comes out. I longed for when telling your friends that you☐re going out to the movies with Paul is as easy as telling them you☐re going with Jenny. I think in that sense, I☐ve done a little good and a whole lot of bad.

I☐ve asked people constantly what I could have done better. They answer simply and directly and tell me that I should be doing what I think is the hardest thing of all to do: Be myself. One of the people who told me that was the best friend in my homecoming article, who didn☐t approve of the idea that I might take a drag queen to the dance. (In the end, I didn☐t.) We☐ve grown apart since that article came out, and now there are times when we don☐t even say hi in the halls. I look back on what happened and I can understand why he was upset. I was wrong. It wasn☐t about him not liking drag queens; it was about respecting other people☐s tolerance levels. It was about nudging people in the right direction instead of jerking them.

Sometimes when I try to talk to him, I can see how much he hurts when he looks at me. I feel like I☐m ripping apart his insides. I don☐t think I ever felt so stupid in my entire life.

I☐m not going to lie. I☐m still a flamer. But maybe there is a difference between nelly flaming and proper flaming. Maybe being nelly is throwing it in people☐s faces because you don☐t want them to see who you really are Maybe it☐s too hard to face the whole world naked, so you take refuge in stereotypes. That way, when people say they hate your guts and you☐re going

to hell, it□s not you, it□s that persona you wear. Then maybe it becomes so hard to take off that mask that you squeeze everything in your world into that niche and accuse your best friends of the greatest atrocities for the smallest crimes.

Maybe.

I don□t know where I□m going from here. I□m still learning. I guess I should start with square one□I experience □romantic feelings□ toward guys□and work from there. It□s time to stop living for the spotlight and start living for myself.

It□s funny, you think you know everything when you□re 17. You start walking forward in long, easy strides until suddenly that rake slams into your face and you think you have a splinter in your nose.

I think I□m bringing a lesbian to prom this year, not because she□s a lesbian but because she□s a good friend of mine whose school is too small to have one. She□s also a great dancer. I□ll show up at her door in my beat-up car, pin on her boutonniere, and hold out a wrist for my corsage. We□ll eat at that fancy French restaurant, maybe get a limo, meet up with some friends before and after the prom, and fill in the rest with laughter.

We□ll just all be ourselves, enjoying the last major event before graduation

My mother, survivor
She may be barely 5 feet tall, but she□s the strongest person I know, from weathering her husband□s desertion after 25 years of marriage to embracing her newly out gay son.
By Michael K. Feds
An Advocate.com exclusive posted May 7, 2003

While putting diesel fuel in our tractor this evening at our home in rural Clermont County, Ohio, as my recently divorced middle-age mother was preparing to mow six acres for the upcoming open house, we talked back and forth about the men we are dating. Among the verities of chirps from spring birds and the bark of the neighbor□s coon hound Shasta-Mae running around in the field, the value of life was again made clear to me.

I saved my mother from suicide last year, ripping the knife from her hands and holding her weeping soul, tight in my arms on the kitchen floor. It was the day my father ended a quarter-century of marriage and left her with a home, bills, land, and a broken heart. But that was a passing moment of weakness, because my mother is the strongest person I know. She stands barely 5 feet tall: I look at her and in my mind still see her standing by her Firebird hot rod in the 1970s photograph she doesn□t know I have pressed in my Bible. She still has her blond hair (although I think she might be getting □assistance□ for that now), and she still turns heads when she puts on her church dresses (forgive me for the combination) and drives off to her Baptist church with the top down on her Mustang GT.

Well, she used to. He got the cars in the divorce, along with a slap on the wrist.

When I was a boy in this rural town, on these six rural acres of paradise, my mother was the flower that was always in bloom, even on our worst days. She was the only one who came into my room and dried my tears after awful days at school, particularly the day when Spanish class was halted for the students to vote on whether or not I was a fag; the teacher was with the majority. My mother was the one who said, on the day I graduated from high school□which I barely made it to□that she was proud of me, even though I was forth from last in the survivor lineup.

She was the one who hugged me when she found out I was gay just months later and listened to my story; so many other mothers would have done just the opposite.

When I was a young man in this rural town, on these six rural acres of paradise, my mother encountered a change in her life. As have so many gay, lesbian, bisexual, and transgendered people, she found out what it is like to come out of her pain and find happiness. After seven years of suffering mental and emotional abuse from my father□during those same years that I was a boy in this rural town□she no longer accepted his victim-of-infidelity treatment. We cleaned out the closet and sent him packing and began to not rebuild, but to build our much-deserved human right of happiness.

Happy Mother□s Day, Mom.

I have a Bearcat BC250D. The city I live in, Cambridge, MA, has a hybird trunk. After programing the frequencies, ID's, and the proper Fleet map, the scanner will on "search" the trunk frequencies. It won't scan the ID's - when I press the scan button, it gives and error message and just searches. Does anyone know if this is normal or if I am doing something wrong.

What does this have to do with scanners?

"Stagger Lee" <SLee@houston-hunks.com> wrote in message
news:0HA5LGKW37761.172974537@Gilgamesh-frog.org...
My mother, survivor
She may be barely 5 feet tall, but she's the strongest person I know, from weathering her husband's desertion after 25 years of marriage to embracing her newly out gay son.
By Michael K. Feds
An Advocate.com exclusive posted May 7, 2003

While putting diesel fuel in our tractor this evening at our home in rural Clermont County, Ohio, as my recently divorced middle-age mother was preparing to mow six acres for the upcoming open house, we talked back and forth about the men we are dating. Among the verities of chirps from spring birds and the bark of the neighbor's coon hound Shasta-Mae running around in the field, the value of life was again made clear to me.

I saved my mother from suicide last year, ripping the knife from her hands and holding her weeping soul, tight in my arms on the kitchen floor. It was the day my father ended a quarter-century of marriage and left her with a home, bills, land, and a broken heart. But that was a passing moment of weakness, because my mother is the strongest person I know. She stands barely 5 feet tall: I look at her and in my mind still see her standing by her Firebird hot rod in the 1970s photograph she doesn't know I have pressed in my Bible. She still has her blond hair (although I think she might be getting "assistance" for that now), and she still turns heads when she puts on her church dresses (forgive me for the combination) and drives off to her Baptist church with the top down on her Mustang GT.

Well, she used to. He got the cars in the divorce, along with a slap on the wrist.

When I was a boy in this rural town, on these six rural acres of paradise, my mother was the flower that was always in bloom, even on our worst days. She was the only one who came into my room and dried my tears after awful days at school, particularly the day when Spanish class was halted for the students to vote on whether or not I was a fag; the teacher was with the majority. My mother was the one who said, on the day I graduated from high school-which I barely made it to-that she was proud of me, even though I was forth from last in the survivor lineup.

She was the one who hugged me when she found out I was gay just months later and listened to my story; so many other mothers would have done just

the opposite.

When I was a young man in this rural town, on these six rural acres of paradise, my mother encountered a change in her life. As have so many gay, lesbian, bisexual, and transgendered people, she found out what it is like to come out of her pain and find happiness. After seven years of suffering mental and emotional abuse from my father-during those same years that I was a boy in this rural town-she no longer accepted his victim-of-infidelity treatment. We cleaned out the closet and sent him packing and began.to not rebuild, but to build our much-deserved human right of happiness.

Happy Mother's Day, Mom.

Is there any way to get the scanner to display the CTCSS tone when using the tone mode? My 780 does, and I like the feature; the 785 apparently does not. I am not finding the manual on this unit to be particularly helpful.

Thanks.

Tis you, bucko, that needs to learn what is going on. I've got nothing against the existance of either Israel or Palestine, and see no logical reason both cannot peacefully co-exist.

Historical fact: The present State of Israel is a product of conquest, of hostile takeover.

If someone came into your home, and said "we are claiming this home for ourselves and we don't care if you don't like it", what would you do? You would fight them tooth and nail, would you not? Denied an army, Palestine, or at least some citizens thereof, are using the only means at their disposal to attepmt to take back what was theirs. I DO NOT CONDONE THE MEANS, but I can understand them. We were not exactly playing by the rules in either our own Revolutionary War or our Civil War. And people without standing armies don't play by rules, as there is no possible way for them to win.

All that being said, the leaders involved on either side are not interested in co-existance. For them, it's whole hog or none, so to speak. Thing is, genocide is not right, no matter who is doing it, or for what stated reason. I refuse to actually take sides in the Middle East situation, because I feel both sides are wrong. Israel, like the United States, is here by right of conquest. That's fine, a right taken my mankind since it's appearance on Earth.. but conquerors have no inherent expectation that the conquered are going to lay down and lick their whatevers.

Then when I lived through the time of the 1967 wars, it was all lies printed
in the papers?

I align myself with no one. I stated plainly that I think BOTH SIDES are
wrong. I stand by my statement about conquest, as it is exactly what was
reported in the news at the time. And 1948 was no picnic for the arabs,
either. What is going on with suicide bombings is morally wrong by any
standard of morality. I understand the ends, I even to some extent
understand the means to the ends.. but do not condone them. What is so
difficult to understand about that? And what Sharon is doing on the West
Bank is equally wrong, and intrinsically evil. You do not punish entire
families for the actions of one of their members.. this sounds like
something out of the dark ages and the Inquisition.

Furthermore, I am not a spammer. I am answering someone else's post, and at
least > I < use my real name and a real addy, unlike the person that I was
answering.

Take care, and stay well.

Taking down a tall mast by yourself is easy, Robert.

1. Disconnect any guy wires or other mount.

2. Stand back.

3. Run if it starts falling towards you.

See how easy that is? ;)

You asked what SPNAKED means. I'll use it in a sentence for you because by now you have gotten some reality email from abuse@alt.net. You are probably sitting in front of your computer licking your wounds afraid to type another troll like sentence or post someones real life Name and Address or post a binary to a non binary group.

You have just been SPNAKED by Chris Caputo for acting like a troll and will no longer cause trouble in this newsgroup.

Here's another new word for you to learn. "TOSSED"

Should you attempt to troll again in this newsgroup you will get "TOSSED" by Chris Caputo.

LMFAO

Here's to ya, 666, Aunt Bea, Barabbas, Juan Garcia Garcia Farrakhan, Voila, Ray!

Gays and lesbians need not apply
Bill Berkowitz - WorkingForChange

05.16.03 - "Reducing wasteful duplication," "eliminating unnecessary bureaucracy," and "encouraging cooperation" were among the buzz phrases used
by House Republicans to sell the Workforce Reinvestment and Adult Education Act, H.R. 1261. The $4 billion bill passed the full House by a party-line 220-204 vote last week, after coming out of the Education & the Workforce Committee by a 26-21 vote, "strengthen[s] and streamline[s] job training and
adult education programs, providing job seekers with valuable tools and resources as they seek to rejoin the workforce or retrain for better jobs," according to the bill's GOP backers. But that's not all the legislation does: Tucked inside the bill is a provision that allows faith-based organizations to receive government grants and sidestep civil rights laws.

"Committee members are carving out an exemption for discrimination," Joe Conn, a spokesperson for Americans United for Separation of Church and State, told me in a late-April telephone interview (before the House vote). "This is part of an overall agenda that allows religious groups to get public funds and discriminate in hiring while using those funds. It codifies
discrimination & rolls back civil rights protections that apply to publicly-funded programs."

In a press release after the bill had emerged from the Education & the Workforce Committee, Chairman John Boehner (R-OH) said: "Strengthening and improving programs that help Americans get back to work is essential in this
time of war and economic recovery. This important legislation would help improve results for Americans striving to get back to work by streamlining unnecessary bureaucracy, increasing effective cooperation among workforce development partners, and placing increased emphasis on basic skills in adult education programs."

The Workforce Reinvestment and Adult Education Act "reforms and reauthorizes" the Workforce Investment Act (WIA), legislation passed in 1998
"which made significant reforms and improvements to the nation's formerly fragmented and inefficient workforce development and adult education

programs," the press release reads.

State and local governments, trade associations, and workforce groups support the legislation, according to the press release. The Labor Policy Association (LPA), described as "an organization of the senior human resources officers of more than 200 of the nation's largest private sector employers, collectively employing nearly 13 million Americans," is also on board.

On May 11, U.S. Secretary of Labor Elaine L. Chao issued a statement in support of the bill. Making no mention of the religious exemption, Secretary
Chao urged the Senate to work quickly to pass the legislation.

What's not to like about legislation that appears to be aimed at providing a
one-stop delivery system for job-seekers to give them "access to labor market information, job counseling, and job training to help them get back on their feet?"

Workplace discrimination

The problem with the Workforce Investment Act is that it "jeopardizes civil rights and religious freedom because it would roll back protection against discrimination or misuse of government funds by religious organizations," the American Civil Liberties Union (ACLU) said in an early April Action Alert titled "Stop Congress from Rolling Back Key Civil Rights Protections."
For the first time there is legislation "allow[ing] religious organizations involved in federal job training programs to discriminate according to religion when hiring staff for these taxpayer-funded services."

The ACLU: "The Act must not allow taxpayer-funded discrimination. Unless Congress explicitly prohibits discrimination, the Bush Administration has made it clear that it will allow religious organizations that take federal funds to discriminate against applicants for jobs on the basis of religion, marital status, sexual orientation, gender, HIV status or any other characteristic that a religious organization finds objectionable. All federally funded employers must protect, not gut, the civil rights of all Americans."

Interestingly enough, neither of the two House Education & the Workforce Committee-issued Fact Sheets dated April 9th mentioned civil rights issues or religious organizations. One section of the Fact Sheet titled "Eligible Training Provider Provisions" referred to "training provider requirements [that] are overly burdensome," and giving States "the authority to determine
what standards, information, and data will be required for eligible training
providers." And another section, titled "Increased Opportunities for Training," said that "the bill provides for greater flexibility in the delivery of core, intensive and training services."

What the Fact Sheet called "overly burdensome" requirements may be existing civil rights laws prohibiting organizations from discriminatory practices if
they receive government grants. Exemptions are outlined in Section 124 of the bill. Titled NONDISCRIMINATION [bill's caps], it says: "Section 188(a)(2) is amended -- (1) by striking `No' and inserting (A) IN GENERAL- Except as provided in subparagraph (B), no'; and (2) by adding the following
subparagraph: (B) EXEMPTION FOR RELIGIOUS ORGANIZATIONS- Subparagraph (A) shall not apply to recipients of financial assistance under this title that is a religious corporation, association, educational institution, or society, with respect to the employment of individuals of a particular religion to perform work connected with the carrying on by such corporation,
association, educational institution, or society of its activities. Such recipients shall comply with the other requirements contained in subparagraph (A)."

Faith-based finagling

The attempt to sidestep anti-discrimination measures is particularly attention-grabbing in light of the two-plus-year controversy surrounding the
president's faith based initiative -- the centerpiece of his "compassionate conservative" domestic agenda. Recently, the Senate finally passed of The Charity, Aid, Recovery and Empowerment (CARE) Act, a stripped-down version of the administration's faith-based package that had been mired in legislative gridlock because right-wing legislators insisted that provisions
allowing religious-based organizations to disregard state and local ordinances against discriminatory hiring practices be included in any final bill.

This issue of exempting religious organizations has surfaced before: A few months after the president announced his faith-based initiative the Washington Post revealed that top administration officials were trying to solicit support from the Salvation Army by assuring the charity that any White House-supported legislation would allow religious organizations to circumvent state and local laws barring discriminatory hiring practices on the basis of religion and sexual orientation. The Post's revelations were met with denials from both the Salvation Army and the administration, but they didn't go unnoticed by Democratic leaders in the Senate. They effectively back-benched the initiative until the anti-discrimination exemption was removed.

At a May 7 Press Conference, Rabbi David Saperstein pointed out that "Religious beliefs do not change the way that a staff member teaches résumé writing or helps file claims for unemployment insurance. Christians, Jews, Muslims, and Buddhists use the same criteria to determine eligibility for Welfare-to-Work programs."

These days, GOP congressional leaders are "pushing to add discriminatory language to every social-program-legislation that comes up," Joe Conn of

Americans United said. "Americans United is monitoring these faith-based grants to see if they are being used in a discriminatory way. If anyone feels they are being denied a job on religious grounds they should contact our legal department," Conn added.

The Workplace Reinvestment and Adult Education Act is not a done deal. It now heads to the Senate where, like the president's faith-based initiative, it should be revised and the discrimination exemption removed.

The ACLU is calling on the Senate to "preserve current civil rights protections in federal job-training programs".

Equal-protection provisions cited

By Matt Krasnowski
COPLEY NEWS SERVICE

May 2, 2003

LOS ANGELES ☐ Knowing they might face discrimination, San Diego resident Jane Brooks said she and her partner Shannon Rose warily pursued becoming foster or adoptive parents last year with Olive Crest Family Care and Adoption Agency.

"We let them know we are a lesbian couple," said Brooks, a 42-year-old law student who lives east of downtown. "We were up front on that. We said, 'If there's a problem, let us know now.' "

For about two months it was all good news. Brooks said they were reassured they'd be treated fairly. Their case manager with the agency was supportive. Brooks and Rose, a physician certified in pediatrics, were deemed "pre-certified as an Olive Crest foster/adoptive family."

Then things changed quickly, Brooks said.

In September, the couple were told that Olive Crest adopted a new policy that specified the agency "prefers to place children with nuclear families" and that other applicants would be considered on a case-by-case basis. Their case manager quit in protest.

"It was like getting slapped in the face," Brooks said. "It was like being told, 'You're never going to get a kid.' . . . After so many reassurances, it was very shocking ☐ very, very, very upsetting."

Yesterday, Brooks and Rose took their frustration to court.

They filed a lawsuit in federal court in Santa Ana, accusing Olive Crest of discrimination in violation of their constitutional rights and state law.

Lawyers with the American Civil Liberties Union filed the complaint against the Orange County-based not-for-profit agency.

The suit contends that because Olive Crest receives federal, state and county funds to recruit, train and certify foster and adoptive families, it must give prospective adoptive parents equal consideration. The agency also is bound by state anti-discrimination laws.

The suit asks a judge to find that Olive Crest violated the U.S. Constitution's equal protection provisions and to order Olive Crest to stop

engaging in "unfair, unlawful and fraudulent business practices" and to develop policies to prevent such discrimination.

The suit also seeks compensatory and punitive damages as well as attorneys' fees.

"The law that's in place needs to be respected," said Brooks, who grew up in a family of five adopted children near Los Angeles. "Children need homes."

A written statement issued by Olive Crest stated the agency was "disappointed" that Brooks and Rose filed the suit.

"We have not seen any official documentation regarding a lawsuit and the press release from the American Civil Liberties Union contains significant factual errors," the statement says.

"We look forward to having an opportunity to set the record straight. Our single most important goal is to place each child in an environment that is in the best interest of the child."

The state's Community Care Licensing Division has taken action against Olive Crest, ordering the group to develop a recruitment policy that doesn't discriminate against applicants based on sexual orientation. Olive Crest appealed a notice of recruitment violations and was rejected, said ACLU lawyer Jordan Budd.

In the aftermath of the Olive Crest experience, Brooks and Rose are working with a different adoption agency.

"We have thousand and thousands of children that need a home. . . . It shouldn't matter who the parents are if they are providing the children what they need," Brooks said.

839. Houston-Hunks slappin the salami--Boy Scouts Lose Funding for Lack of Gay sensitivity

Miami-Dade United Way Cuts Scouts' Grant
Wed May 14,10:30 AM ET Add U.S. National - AP to My Yahoo!

MIAMI - The United Way of Miami-Dade will no longer give nearly a half-million dollars a year to the local chapter of the Boy Scouts of America, citing the chapter's failure to provide gay sensitivity training for its leaders.

At a private meeting Tuesday, the United Way's board of directors voted unanimously to discontinue the annual $480,000 grant after the agency's current fund-raising campaign ends June 30.

The funds represent about 20 percent of the Scouts' South Florida Council's operating budget. Most of the money goes to programs in the area's poorer communities.

"It's a serious blow to the council's ability to deliver Scouting programs," council spokesman Jeff Herrmann said.

At least 50 other United Way offices nationwide, including Seattle and San Francisco, have pulled their contributions since a 2000 U.S. Supreme Court (news - web sites) ruling upholding the Scouts' right to ban gay leaders.

Miami-Dade's United Way based its decision to suspend funding on its belief that the Boy Scouts agreed in 2001 to implement training to help Scout leaders be sensitive in dealing with children who have trouble coping with sexuality issues.

Herrmann said the Boy Scouts never agreed to such a deal.

"Sex education and sexual orientation are not part of our program and we're unwilling to make them part of our program," he said.

840. Houston-Hunks slappin the salami--Block-long Philly mural celebrates gay life

Block-long Philly mural celebrates gay life

A 7,500-square-foot mural that pays tribute to Philadelphia's GLBT community will be dedicated on Saturday.

The mural is the latest commissioned by the city for various neighborhoods. Titled "Pride and Progress," it is one of the largest, stretching almost a block long along one side of the city's gay community center.

"I wanted to create something beautiful and atmospheric," said Ann Northrup, 54, the artist whose design was chosen for the mural.

Northrup, 10 assistants and 10 volunteers began work on the mural last August, using more than 50 gallons of latex paint to create the panoramic scenes.

"Pride and Progress" depicts a composite of 1960s gay civil rights marches in Philadelphia and New York, a festival on cobblestone streets with a multicultural throng and segments of Independence Mall, all under a moody sky with the hint of a rainbow.

Jane Golden, who founded the city's mural arts program in 1984, said the idea of a mural for the gay community was first raised three years ago.

She praised Northrup's design because of its historical, political, multicultural, multiracial and multigenerational feel.

Golden said that in researching the project, no one was able to find another public mural in the country paying tribute to the gay community.

Rainbow banners to fly in Ferndale

Gay-friendly pennants symbolize city's tolerance
May 16, 2003

BY BILL LAITNER
FREE PRESS STAFF WRITER

Two decades ago, Ferndale was, well, just another suburb of Detroit.

This week, lampposts in the city's downtown display rainbow pennants, crowning Ferndale's unlikely transformation to what many are calling the gay-friendliest city in Michigan.

On June 1, the city will host Michigan's largest gay-pride gathering, marking the nationwide start of Gay and Lesbian Pride Month. Organizers hope Motor City Pride, in its third year in Ferndale, grows to 20,000 patrons from last year's 15,000.

Compared to the downtown's other promotional banners, the new rainbow flags, signaling gay solidarity, are small and unobtrusive. Some gays say they're signs of accelerating acceptance across society. Others call them tokens of a minority still embattled but at least claiming a beachhead against intolerance in this suburb of 22,000 residents just north of Detroit.

Either way, Ferndale is on the map as the first Detroit suburb where gays say they're truly secure -- as residents, civic activists, business leaders and -- after helping to elect an openly gay councilman in -- as voters.

The flags, to be up through the end of June, will be bigger next year, vows Michael Lary, a resident and store owner who paid for the colorful swatches. Keeping them small this year "was tasteful, and not shoving it down anyone's throat," said Lary, 41.

It also keeps them out of reach of those who might tear them down, he said, smiling after putting up the first several flags. Most of the three dozen flags are going up next week on West 9 Mile Road. Lary is active in downtown promotions and co-owner of Just 4 Us, a shop that caters to gays.

Merely seeing the colors go up without controversy -- without the outbursts of critics who once frequented city meetings and vilified the annual festival -- shows gays have made strides in Ferndale at gaining acceptance, said Mayor Robert Porter.

But resident Latrice Jackson, 41, called them "so fake" because "we are so segregated in this society." A health care worker, Jackson will host the Pride festival's Ladies Lounge, "to meet and greet. We're going to be drumming!" she said.

Jackson feels strength only in numbers. Her Ferndale block is chock-full of gays, with one neighbor getting a sex change.

"It's like, 'Hey, look! He's wearing a dress today,' " she quipped.

Elsewhere, the city is far less gay and gay-friendly. Two precincts east of Woodward and north of the State Fairgrounds are a bastion of fundamentalist churches, firmly antigay. For years, residents bitterly complained at City Hall against gays and the Pride festival. Not anymore.

"It's true that a lot of us aren't comfortable with what's going on," said Robert Paczkowski, 77, mayor from 1974 to 1980. But complaining does no good, he said, because City Hall is pro-gay.

One reason? For the last two decades, when leaders yearned for new residents, more shoppers and fresh businesses, gays and lesbians arrived to invest. Monday's City Council vote was a quick 5-0 to approve the Pride festival permit. Last week, the Downtown Development Authority OK'd the rainbow flags.

The flags may alienate some residents, many of them retirees, who tolerate gays and lesbians "as long as they're not too visible," said Richard Elling, a resident and chairman of the political science department at Wayne State University.

But Ferndale's gays seem past the point of worrying about that, said Elling, who is not gay.

"It's like the black pride movement of the '60s. You're saying, 'I'm glorying in this. I'm not ashamed of anymore,' " he said.

Demographers say the nation's gays and lesbians increasingly resemble other minority groups, who first set up enclaves in big cities and clung to their subcultures, then fought discrimination as they moved to suburbia.

For thousands of Detroit's gays -- Ferndale officials hesitate to give an estimate -- the move has been north to this blue-collar town, whose stock of conservative Christians is mixed with a heritage of liberal Democrats and unionists, said the Rev. Robert Wurm, pastor of St. James Catholic Church in Ferndale and a student of the city's history.

Now, fluttering downtown is the rainbow symbol, designed by a California artist in 1978, and marking streets of gay enclaves across the country -- from New York and San Francisco to Ferndale.

From Closet to Ramp: Nepal Gays Demand Rights
Wed May 7, 7:52 AM ET Add World - OneWorld.net to My Yahoo!

Sanjaya Dhakal,OneWorld South Asia

KATHMANDU, May 7 (OneWorld) - While the UN recently put off a resolution seeking protection for homosexuals, in sharp contrast, the orthodox Himalayan nation of Nepal paved the way for their acceptance last week, by holding the first ever beauty pageant for the persecuted minority.
When a bevy of impressively dressed gays, lesbians and bisexuals sashayed down the aisle at the National Theater in the capital, Kathmandu, it took the Himalayan nation's conservative and predominantly Hindu society by surprise.

Organized by the Blue Diamond Society (BDS), a nongovernmental organization (NGO) working to promote homosexual rights, the beauty pageant-cum-fashion show was an event that finally brought Kathmandu valley's 10,000 homosexuals out of the closet.

"Our society has denied the existence of homosexuals for too long. This event was to show their existence and work towards building acceptance," says BDS executive director Sunil Babu Pant.

The first sign of an organized body of homosexuals was observed after BDS held a conference in Kathmandu in January, advocating the need to respect the human rights and health rights of homosexuals.

Set up in September 2001, BDS also provides counseling to Nepal's homosexuals.

But for most Nepalese, there is no such thing as the gay way. "Homosexuals simply do not exist in society's scheme of things. They do not have legal or social recognition," says an advocate with the Forum for Women, Law and Development (FWLD), Basanta Basnet.

Nepalese regard homosexuals as some kind of Western detritus. Adds Basnet, "They are thought to be a disgusting bunch of people; a product of Western anomalies."

FWLD provides legal services to gays in coordination with BDS.

Even as they face massive homophobia, police atrocities and the looming threat of AIDS (news - web sites) also haunt this community living on the fringes of society.

There have been news reports of police harassment of homosexuals especially those in drag. On April 22, The Himalayan Times daily carried a report of

police torture of a group of gays.

"We had stepped out of a restaurant when some policemen beat us for no reason at all. Then they took us to the police station and again tortured us," one of the gays, Ramesh Rai (name changed), was quoted as saying.

"We behave differently than straight people but we have the same feelings like the others. We should be allowed to live with dignity," said Rai.

Immediately afterwards, Pant was notified and he with the help of FWLD got them released. "There have been many incidents of police beating, torture and even sexual exploitation of transvestites as they are the most vulnerable among homosexuals," says Pant.

But attitudes have slowly begun to change. According to Pant, a recent meeting BDS and FWLD had with the police brass was fruitful. "The police assured us of help and said they would instruct their juniors not to harass homosexuals," says Pant.

Basnet alleges it is junior policemen who torment the transvestites, call them names and even physically and sexually exploit them.

A top cop says the police - like society - are unprepared to deal with the issue. "That's because the issue of homosexuality is a new one. But with better coordination, we hope the situation will improve," he adds.

AIDS is another nagging problem. "Earlier, homosexuals had no idea that sexual relations could transmit the disease. But now awareness campaigns have made them aware," says a social worker.

In fact, BDS distributes free condoms and other materials to raise AIDS awareness in the community. It is supported by these agencies in its efforts. The recent fashion show was also sponsored by an NGO which promotes the "Number One" condom in Nepal.

AIDS awareness is sorely required, given the fact that prostitution is not uncommon. "BDS has been distributing condoms to MSMs (men who have sex with men) to prevent the spread of AIDS," says Pant.

"Issues like educational and health rights should be accorded top priority to help these people," asserts leading actor Madan Krishna Shrestha, who was one of the chief guests at the beauty show.

Shrestha's subsequent remark reveals Nepal's blind spot regarding homosexuality. "I was really surprised that there are so many homosexuals here," he says.

BDS estimates there are at least 10,000 homosexuals in the Kathmandu valley alone.

Homosexuals in Kathmandu consist of gays, lesbians, transvestites, eunuchs and bisexuals. "Although eunuchs and transvestites consist of only one to two percent of the total number of homosexuals, society considers all homosexuals eunuchs," points out Pant.

The majority of Nepal's homosexuals are behaviorally bisexuals who lead a double life. Says a social worker, "There are many who lead a normal life in their family but are bisexuals in reality. They undergo acute stress and depression and we give them counseling," he says.

843. Houston-Hunks slappin the salami--Does Gay Pride Matter?

Does Pride matter?

As the Pride season approaches, we wondered what you thought about it: Is it a beautiful community experience or an embarrassing bad example? Does it help or hurt our cause? Does it mean anything any more?

As usual, you're not shy with your opinions. We were deluged with e-mails: angry, loving, inspiring, melancholy and well-reasoned. Those against Pride were a little louder than those for -- but perhaps that's because you sent us so many level-headed e-mails full of constructive criticism on how Pride can be improved, rather than blindly accepting it for what it is.

These opinions are worth reading, even if you don't share them. They might just spark you to make a few changes in the way you approach Pride this year -- whether it's making sure to go out and show your support or deciding to boycott; toning it down or camping it up; lending a hand or organizing an alternative.

844. Houston-Hunks slappin the salami--African leaders 'scapegoat gays'

Newsgroup: rec.radio.scanner

African leaders 'scapegoat gays'

President Sam Nujoma says homosexuality is unAfrican
Southern African leaders have been accused of blaming homosexuals for their countries' problems.

A joint report released in Cape Town by two human rights organisations said that verbal attacks by African leaders had led to a culture of intolerance in their countries.

Human Rights Watch and the International Gay and Lesbian Human Rights Commission (IGLHRC) have documented harassment and violence against lesbians, gays and bisexuals in Botswana, Namibia, South Africa, Zambia, and Zimbabwe.

Their report says that victims have been assaulted, jailed, sacked from jobs, denied access to healthcare, expelled from schools, evicted from their homes and driven into exile, or even to suicide.

"When Southern African political leaders like President Robert Mugabe of Zimbabwe make speeches saying that gays and lesbians are 'worse than dogs and pigs', it should be no surprise that violent attacks follow," said Scott Long of Human Rights Watch, co-author of the report.

"These attacks are just the first step in creating a climate in which all rights are at risk," said Paula Ettelbrick, executive director of IGLHRC.

Beatings

The report was compiled from eyewitness testimonies. One 16 year-old Zimbabwean gay man, tells how four plain clothes policemen confronted him and a friend in November 2001 at a shopping centre in Harare.

"They showed us their IDs, they were CIO [presidential security police]. They handcuffed me and threw me in a car. They called my friend over, and they said to us, 'You gay people, you should be killed'."

He said they beat them both and drove him about until night before he was thrown into a prison cell.

The two organisations are calling on the five governments to stop promoting intolerance and inciting discrimination and abuse. They also urge:

repeal of laws banning sodomy;

enacting protection against discrimination;

promoting awareness of people's rights.

In South Africa, the constitution outlaws discrimination on the basis of sexual orientation and in March the nation's highest court ruled that gay couples should receive the same financial benefits as heterosexuals.

However, the report concludes that any equality is fragile, and even endangered by "the silence and foot-dragging of political leaders in South Africa".

Democratic Candidates Seek Gay Vote
Mon May 12,10:46 AM ET Add Politics - AP to My Yahoo!

ATLANTA - During his keynote address at a black-tie dinner here Saturday, Sen. John Edwards (news, bio, voting record) voiced his support for adoptions by gay parents.

The North Carolina senator, one of nine Democrats seeking the party's presidential nomination, isn't the only one courting gay voters. Former Vermont Gov. Howard Dean has touted a law he signed allowing civil unions for gays and lesbians. U.S. Sen. John Kerry (news, bio, voting record) of Massachusetts, a decorated Vietnam veteran, makes has said gays should be allowed to serve in the military.

Bill Clinton (news - web sites) made history in 1992 by openly courting gay voters en route to the White House. Eleven years later, the courting of gay voters is under way like never before.

"In a crowded race or a close race, an energized and mobilized constituency can make a real difference," said Dave Noble, executive director of the National Stonewall Democrats, a group that promotes the agenda of gays within the party.

"Right now, we've got so many different candidates going after the community, and there's not one candidate the community has settled upon."

Exit polls from the 2000 presidential election showed that 4 percent of voters were gay and that close to three-quarters of them voted for Democrat Al Gore (news - web sites). In the 2004 Democratic primaries, their influence could prove pivotal, activists argue.

Several candidates for next year's race, including Edwards, have hired staff members to advise them on gay issues. U.S. Rep. Richard Gephardt (news, bio, voting record) of Missouri has said his daughter, Chrissy, will be an ambassador to gay groups. She is a lesbian.

"The gay community has become one of the constituencies you have to meet to be a viable Democrat," said Steve Elmendorf, a top adviser to Gephardt's campaign.

That was clear during this month's Democratic debate in South Carolina. The nine candidates each touted their gay-rights credentials and universally condemned anti-sodomy laws as an invasion of privacy.

Six of the nine candidates have endorsed the idea of civil unions, though most won't go as far to say they support gay marriage.

Edwards spoke Saturday night in Atlanta at an event held by the Human Rights Campaign, the nation's largest gay-rights group. His speech also included calls for greater workplace protections and stepped-up efforts to find an AIDS (news - web sites) vaccine.

"I was raised to believe in an America that embraces everybody," Edwards said.

When speaking of adoptions by gay parents, Edwards said, "In a world where far too many children are neglected or unwanted, we need to encourage responsible, loving adults to raise children, which is why I support the rights of gays and lesbians to adopt children."

Edwards did not explicitly address civil unions, though he apparently was referring to the subject when he said "not everyone of us will agree on every single issue."

During his 1998 Senate race, Edwards said he was opposed to gay marriage. Although he does not object to states' recognizing civil unions, he continues to have reservations about both gay marriage and civil unions, said Jennifer Palmieri, Edwards' campaign spokeswoman.

"It's an issue he thinks the country ☐ and North Carolina ☐ is not ready for," Palmieri said.

But his efforts to court the gay community could work against him in North Carolina, particularly if he ends up seeking re-election to the Senate in 2004.

If Edwards runs for the Senate, "you can sure this will be brought up," said Thad Beyle, a political science professor at the University of North Carolina at Chapel Hill.

"It gives some ammunition to people. I think it's probably less of a big deal that it used to be, but there are still people here who are uncomfortable with this. They see homosexuality as a sin."

In a similar vein, the Democratic presidential nominee risks losing some support among swing voters in the South, analysts say. But campaign strategists downplay that potential.

"It's overrated as a general election liability," said Elmendorf, the Gephardt adviser. "In 1992, Clinton got people past the notion that if you're pro-gay rights, it will kill you in the South."

Savage Love 2.0
More

by Dan Savage
For the past decade, Dan Savage has steered GLBT, straight, curious and confused people down the path of healthy hedonism in his internationally syndicated sex advice column, "Savage Love." Now, we have him all to ourselves: Introducing "Savage Love 2.0," an all-gay, all-the-time column just for readers of PlanetOut and Gay.com. Steel yourself for some sharp-tongued answers to your gayest questions and read on. (Note: Reader discretion is advised.) E-mail Dan your questions at mail@savagelove.net.

I'm openly gay, and I have often thought that my roommate was also gay. One day while he was out, I decided to snoop around on his computer -- there isn't a better way to really find out about someone than by looking through his Internet history. Sure enough, his computer was full of gay porn. Now I don't know what to do. He tells everyone he is straight, but it's so obvious that he isn't. I understand that he is probably too insecure to come out, but I want to be able to help him. I definitely don't want to put pressure on him to come out, but I would like to be able to talk to him and to help him with his struggle. How can I approach him so he knows he can talk to me, that I am there to help him?
-- What Would Jesus Do?

Let your roommate be. He'll come out when the pressure gets to him -- and if he's checking out tons of Internet porn, I can assure you that the pressure to come out and start getting laid is definitely building. In the meantime, WWJD, just because someone tells you he's straight doesn't mean that you or anyone else has to believe him -- or pretend to believe him, even to his face. When he says he's straight, say, "I don't think so, Nathan Lane. You're gayer than American musical theater." Don't tell him why you don't believe him (and no more snooping, you dog), just tell him you've got a hunch about him.

I'm a 24-year-old gay man who has been living with the same man for almost four years. He is incredibly nice, giving and supportive. I have been faithful to him, and I believe he has been faithful to me. The only problem with the relationship is that he has some major issues with sex. He was raped at age six, and I don't think he has ever truly dealt with it. For four years, I have been trying to help him through this, but now I've realized I will never be able to rid him of his demons; he must do it on his own. My major problem is that we don't have sex -- maybe once a month, if I'm lucky. When that once-a-month fling actually happens, it lasts three to five minutes and lacks any intimacy. I do love this man, but my balls

are blue, man! I see myself being with him for the rest of my life, but I know I really enjoy sex. I never saw myself as a cheater, but as I get more and more frustrated, I think more and more about having an affair. Is it wrong for me to think that maybe this man can't give me everything, and I should just have a fling every now and again to satisfy my needs?
-- NYC

Break up with him, NYC. For his own sake, your boyfriend needs to deal with his shit -- and being dumped because he refuses to deal with his shit just might prompt him to go off and deal with his shit. Once you've dumped him, you can run off and have flings and, with any luck, find yourself a guy who is ready for a big-time, all-grown-up, love-and-sex-and-everything relationship. Tell your boyfriend that once he's dealt with his shit and is ready, willing and able to have a love-and-sex-and-everything relationship, you're totally open to being with him again -- provided, of course, that you're still single if and when that time finally comes.

My question is not sex-related; it's more a question of confidence. I am 23 years old and a fairly handsome guy. I don't have a problem finding sex or talking to people -- plus, I'm a huge drunken flirt. But I started losing my hair when I was about 20, and it sucks. It sucks a lot. It's truly what I dislike most about myself. Every day, when I look in a mirror, I see less and less hair. I mean, I'm not bald yet, but I will be -- and I hate the inevitability of that. It drives me nuts. I'm wondering how I can deal with this. I've tried Rogaine and that crap, to no avail. I don't want to go bald, and I can't accept the fact that it's happening to me. What can I do?
-- Hates All Inferior Rogaine

What can you do? Get used to the idea of being bald, HAIR, and try to have a sense of humor about it. Some gay men don't find bald men attractive, it's true, but some do -- and others don't really give a shit one way or another. But nobody finds bitter bald guys attractive, HAIR, nobody. So it's time to accept your fate. Enjoy your hair for as long as you've got it, and when it's reached the point when there's more scalp showing than hair, SHAVE YOUR HEAD. Come over to the dark side, HAIR, and embrace baldness. It's not what you would have chosen for yourself, it's true -- but the graceful, confident, attractive thing to do in that situation is to make it look like you chose it.

You got it wrong in advising Weddingboy. I should know, since I was best man at a friend's wedding two months ago. It's not about whether or not he wants to bring someone: It's the couple's wedding day, not his. Everything about the day should be how they want it. In my case -- and without my asking -- the groom and bride invited my partner of four years and even asked him to be a groomsman, and we were the only gay couple there. So Weddingboy should ask the couple what they want, then go along with what they say -- either going alone, with a male date, with a female date or whatever.
-- Supporting Castmember to the Real Stars

If the couple getting married doesn't want any gay people at their wedding, SCTTRS, then perhaps they shouldn't invite any gay people to their wedding.

Yes, the couple getting married gets to make all sorts of demands on the folks attending -- some reasonable, some idiotic. But demanding that their gay guests jump back into the closet isn't something that the "real stars" should do -- and if they make that demand on their gay guests, it's not a request that their gay guests should honor. If someone invited me to a wedding but asked me to leave my boyfriend at home, I wouldn't attend their wedding at all. I'm sorry, SCTTRS, but the days when gay people were expected to accommodate the prejudices and delicate sensibilities of folks who can't deal with us are long since past.

That's the problem with gay people: It's always about what is best for them -- screw everyone else and what they think. What about how other people at the wedding feel? There are religions that oppose homosexuality. Get over it, Dan, it's a fact of life. Weddingboy's cousin's wedding is not the place to make a point. Not every member of a family is liberal and accepting, and it is wrong to create a problem on someone else's big day. His family may need time to take it all in, and may require a more gentle approach. Not every human on this earth understands what being gay means and how to react to a situation, and a wedding is not the place to bring this forward. Why should Weddingboy spoil everyone else's day for his own selfish benefit? Your advice is closed-minded, and a typical gay man's advice.
-- Tony P.

I'm glad you think the advice I gave Weddingboy is "typical gay man's advice." I would like to think that the overwhelming majority of gay men out there wouldn't dream of jumping in and out of the closet at the whim of their bigoted relatives. It's not how I live, and it's not how any gay man should live. Yes, some religions have a problem with homosexuality. If Weddingboy's cousin's religion has a problem with homosexuality, then they shouldn't invite him. And if straight couples invite gay friends or relatives to their wedding and some asshole bigot, religious or otherwise, gets upset or makes a scene, Tony, it's the bigot who ruined their big day, not the gay folks.

Extending bill's reach to gays sparks debate
Justice minister says he supports plan

But religious groups call it threatening

TONDA MACCHARLES
OTTAWA BUREAU

OTTAWA☐The federal justice minister said yesterday he supports extending hate-crimes protection to gays and lesbians.

An amendment to the 1970 hate-crimes law, which now only bans the incitement of genocide or hatred against an "identifiable group" defined by colour, race, religion or ethnic origin, is currently under study by the Commons justice committee.

But the bill, proposed by New Democrat Svend Robinson (Burnaby-Douglas), is contentious because religious groups have argued that adding "sexual orientation" to the law threatens freedom of speech and religious freedom.

The Canadian Alliance's Vic Toews (Provencher) said Robinson's amendment is so badly drafted "it would classify parts of the Bible as hate literature and portions of the Catholic catechism as hate literature."

He said the committee has received more correspondence on the proposed hate-crimes amendment than on any bill.

Yesterday, Robinson challenged Justice Minister Martin Cauchon in a heated conversation before a justice committee meeting and again later in the House of Commons.

"Does the minister support the inclusion of sexual orientation in Canada's hate-propaganda laws, yes or no?" Robinson asked in question period.

"Yes," Cauchon said. "The bill is consistent with the government's position on sexual orientation."

But Cauchon insisted it was up to the parliamentary committee now examining the proposed amendment to make its report to Parliament.

"We will see what will happen," he said.

When justice department officials appeared before the committee, they cautioned that extending protections to gays and lesbians may be seen as an infringement of free speech. The committee was urged to consider whether there is enough evidence of hate propaganda against gays and lesbians and

enough evidence of harm done to that group to justify breaching free speech before the courts.

But the department has not, until now, advocated a position. The Supreme Court of Canada has only narrowly upheld violating free speech in the hate-crime prosecution of Alberta teacher Jim Keegstra, convicted because of his anti-Semitic teachings.

Robinson, an openly gay member of Parliament who has tried for years to amend the hate-crimes law to cover gays and lesbians, was infuriated when three social conservative Liberal MPs showed up Wednesday night to replace three absent Liberals on the justice committee. He accused Cauchon of stacking the committee with the sole purpose of killing his bill.

Cauchon denied any role in deciding who went to the committee. "We oppose and condemn hate propaganda," he said. "It's an amendment to the Criminal Code. As I said, it's in agreement with government's policy."

But Robinson didn't accept his explanations.

"Tom Wappell (Scarborough West), Andy Savoy (Tobique-Mactaquac), and Paul Steckle (Huron-Bruce) have consistently opposed equality for gays and lesbians," said Robinson.

One Liberal MP on the committee admitted he was "surprised to see" the trio there, but could not explain their appearance.

The bill is now caught up in procedural wrangling in committee. The Alliance has put forward a motion to kill the bill. But it is expected to come back to the House of Commons within a couple of weeks.

"Let's examine the issue of whether or not this bill in fact criminalizes the communication of essential matters of faith," said Toews, the Alliance's justice critic.

I'm fairly sure that is the problem. I'm using a Pro95. Any
suggestions on what can be used to knock down the overload? I know
that there are things that can be used for the same problem with a
shortwave (a passive deselector, for example).

Blunder could cost NHP $1 billion in fines

Radio system was never OK'd by FCC
By Cy Ryan
<cy@lasvegassun.com>
SUN CAPITAL BUREAU

CARSON CITY -- A major foul-up in building a communications system for the Nevada Highway Patrol has left the state police operating without proper federal licenses for three years, the chief of the highway patrol said Thursday.

The Federal Communications Commission is investigating the violation and could levy hefty fines, Col. David Hosmer said. In addition, the highway patrol is conducting an internal investigation that could result in charges of malfeasance or nonfeasance on the part of employees who failed to get the licenses.

"This was buffoonery at its best," Hosmer said of $14 million to $15 million spent on a communication system that may have to be junked. Hosmer took over the highway patrol six months ago.

Hosmer said the potential fine could be $1 billion, but he doesn't think that will be imposed.

The FCC confirmed this morning that an investigation was under way and that fines are accrued on a per-violation basis. But spokesman David Fiske said that the highest fine the FCC has ever actually imposed was $6.5 million, levied earlier this month against Qwest Communications.

The error will force the highway patrol to switch to an old system by June 9, and in the long term the patrol may have to start over to get a system that that can work as fast and carry as much traffic. Some experts say that the problem can be resolved without replacing the system, but that will depend on FCC approval of the frequencies.

The patrol contracted with Motorola to build the computer radio system to tie in troopers with each other, the dispatch center and other law enforcement. But nobody ever applied to the FCC for permanent licensing of the frequencies. It was activated in 2000.

In October the agency discovered it was not licensed for the frequencies it is using, Hosmer said. The FCC has asked the patrol to get off those frequencies by June 9, he said.

That will force the patrol to return to a conventional system in which mountaintop units relay the messages, he said.

This old system, Hosmer said, is slower and less effective and can't carry as much traffic. But troopers will at least be able to communicate.

The new system that was built "works far better than the old system," Hosmer said. But the FCC has told his department that it won't have the frequencies available after June 9. Hosmer said the FCC has only a limited number of frequencies left to allocate.

A Las Vegas engineer who recently advised the highway patrol on the issue disputed the statement that no frequencies were available.

Chuck Rogers, the frequency adviser for Nevada for the Associated Public-Safety Communications Officers Inc., which nationally coordinates requests for frequencies so there is no overlapping, said he was asked to coordinate getting the frequencies once the error was discovered.

Applications were initially filed with his organization to start the process of identifying and reserving frequencies, Rogers said. A temporary FCC license was obtained for authority to operate during the licensing process.

"Unfortunately, the temporary authorization was not extended," he said.

Wayne Peterson, account manager for Motorola Inc. in Reno, said it was up to the highway patrol to obtain the frequencies from the Federal Communications System.

"It was the responsibility of the customer," Peterson said.

At the beginning of the project, Peterson said he understood that the patrol was "in the process of obtaining the frequencies." He said they had a "special temporary authority" for the frequencies.

"Our understanding they were moving forward," he said. Peterson said he was surprised to learn a couple of months ago that the patrol did not have a license for the frequencies. "I'm still surprised," he said.

Peterson said his company has offered to help the patrol secure FCC approval for no added cost. He added he believed there were some frequencies available. He did not know how long that process would take.

The FCC recommends in its regulations that a group get the frequencies approved and then build the system, Hosmer said. That didn't happen in this case so the patrol is left with an expensive communication system that won't have any licensed frequencies.

"You would never build a house in a swamp without a good foundation," he said.

The highway patrol is preparing a summary report that will be turned over to legislators and the state attorney general's office to determine if there should be prosecution for malfeasance or nonfeasance.

"We deserve a whack on the head. It was extremely bad management of state funds," Hosmer said.

To keep the communications flowing, Hosmer said he will have to send programmers to the 56 mountaintops to activate the units there so messages can flow back and forth between patrol officers, dispatchers and other law enforcement units.

The Senate Finance Committee told Hosmer recently to develop a plan for switching to a new system. Most of the present hardware would not be compatible with any new system, Hosmer said.

Assemblyman Morse Arberry, chairman of the Assembly Ways and Means Committee, said members raised concerns on numerous times since the first money was approved in 1997. He said they were assured the system was going to work.

Hosmer said "several different people have been trying to get us legal" with the FCC and the unlicensed frequencies. But that has not panned out.

The planning for the system started in 1993 or 1994, he said, and money was allocated in 1997 and 1999. He said the communications manager for the project was concerned there were not enough frequencies in 1998 but "he never spoke up." And when the money was appropriated, some people in the division knew there were frequency problems.

He said the contract with Motorola never required that company to get the frequencies.

His recommendation is to join with the state Transportation Department, which has an 800-megahertz radio band that is approved. But he said that would take several years to convert.

He said he would rather pay a use fee to the Transportation Department than have the highway patrol running these complex systems. "We're cops and this is not our expertise," he said.

The problem, Peterson said, is that if the patrol switched from a 150- to an 800-megahertz system as used by the Transportation Department, that much of the equipment could not be used.

Rogers believes the system can be saved.

Rogers, who retired from Motorola, said a study shows there are 54 frequencies available in the Las Vegas area that could be licensed by the FCC. He said some money would have to be spent on these so they would not interfere with other frequencies.

Rogers said he is confident there are enough frequencies in the rest of the state to take care the needs of the highway patrol.

He said the 800-megahertz communications system operated by the state Transportation Department is partially owned by Nevada Power Co. and "It will last only a number of years and than be scrapped. This is taxpayer money."

In a letter to legislators, Rogers said, "As a citizen and taxpayer of Nevada, I ask that you (legislators) not support funding any money to replace the 150-megahertz Nevada Highway Patrol radio system. This would be a gross waste of taxpayer money. The radio system is not broke and does not need fixed. Only the proper FCC licensing needs to be addressed."

Hi Group,
I was wondering if anyone had any interesting frequencies they might share with me. I'm headed to the Caribbean on a Royal Caribbean cruiseliner, we're leaving out of San Juan Puerto Rico, and headed to: St. Maarten, St. Thomas, St. Lucia, Antigua, and Barbados. Anyone know if I'm going to have any hassles with carrying along a scanner, as well as any interesting frequencies to monitor while I'm out and about?

Post here, or shoot me an email, thanks.

Hello:

A bit confused over terminology.

The Scantenna ST2 is supposed to be "Omni," and non-directional.

Does this imply that you should think of a 3-d constant radius
reception sphere, with the antenna at the center ?

Thanks,
Bob

857. Houston-Hunks Gay Pride--Corcoran Not Censured for Gay Bashing

Newsgroup: rec.radio.scanner
Date: 2003-05-20 18:55:17 UTC
From: SLee@houston-hunks.com

A state House ethics committee decided April 24 not to censure Rep. Arlon Lindner, R-Corcoran, for disparaging remarks he made in March about gay people, the Holocaust and AIDS in Africa. Lindner, who has proposed repealing state human-rights protections prohibiting discrimination based on sexual orientation, and who has questioned the extent to which Nazis persecuted gay people during the Holocaust, made statements on the House floor that many considered offensive. "What I'm trying to prevent is the holocaust of our children getting STDs, AIDS and various other diseases," he said. "If you want to sit around here and wait until America becomes another African continent, well, then you do that, but I'm going to do something about it." When asked by the ethics committee if he regretted any of the statements, Lindner replied, "Not in the least." Rep. Matt Entenza, DFL-St. Paul, said that the ethics committee's decision not to censure Lindner means that any comments, regardless of their truth or accuracy, will now be allowed on the House floor. "I think this highly partisan proceeding would give even a kangaroo court a bad name," he said.

858. Houston-Hunks Gay Pride--Howard Dean first to sign Gay Civil Union law in Vermont

Newsgroup: rec.radio.scanner
Date: 2003-05-20 18:55:17 UTC

If not for the fact Howard Dean is running for president, the third anniversary of his signing of the civil-unions law might have passed without notice. Civil unions have become an accepted part of Vermont life. According to Republican Gov. James Douglas, who was outraged by Pennsylvania Republican Sen. Rick Santorum's anti-gay remarks in an interview with the Associated Press, comments over the controversy over civil unions in Vermont has all but died. "Most Vermonters have come to accept the civil-unions law as a part of our state statutory framework,'' he said. And Douglas said the law has benefited Vermont. "I think there is some evidence that it's been beneficial economically to us, in terms of visitors coming to the state for ceremonies and whatnot and spending money when they are here,'' he said. That's a far cry from three years ago, when it was feared tourists outraged by the passage of civil unions would boycott the state. And the quiet acceptance within Vermont of the law today is a far cry from the emotional turmoil of 2000, as lawmakers wrestled with the issue in the spring and faced the verdict of voters in the fall. Today's acceptance makes it hard to recall that the political climate was so volatile that at times then-Gov. Howard Dean wore a bulletproof vest; that the outrage then was so great that he signed the law in private. When Dean launched his presidential campaign, many analysts dismissed his candidacy solely because of the civil-unions law. Their feeling was that the nation, especially the South, would not vote for a candidate who was such a strong advocate for gay rights. But Dean's campaign, fueled in part by his criticisms of the Bush tax cut, his anti-war stand, his direct style and his advocacy of national health insurance, has gained momentum among Democrats. Vermont and its leaders have come a long way since the winter of 2000. Dean himself says, "I didn't have much of an understanding of the gay community until after I signed the civil-unions bill.'' --Christopher Graff

859. Houston-Hunks Gay Pride-- Savage Distorting Gay Issues on MSNBC

: Savage Distorting Gay Issues on MSNBC
Group Says Show Is ☐Sensationalized, Unbalanced☐

From Staff Reports

Michael Savage (pictured), whose cable television program premiered on MSNBC in March amid controversy and protest, sensationalized and grossly misrepresented lesbian, gay, bisexual and transgender (LGBT) issues on his May 3 show, according to the Gay and Lesbian Alliance Against Defamation (GLAAD).

During the program, Savage stated, ☐Here☐s what worries me: If a fellow goes in for a job that requires certain skills, and he happens to be dressed as a woman, and he says to the person, ☐I want this job and I☐m a transsexual.☐ And then the employer says, ☐Can you do this job?☐ And he says, ☐that☐s irrelevant. What☐s relevant is my sexuality. I☐m going to sue you.☐☐

The May 3 show marked the first time that Savage has discussed LGBT issues on his new show. But GLAAD has charged that the discussion was one-sided and blatantly incorrect in its analysis of California Assembly Bill (AB) 196, which grants employment protections to transgender people and sets penalties for those who deny employment based solely on the person☐s gender identity. Savage☐s only guest on the show was Peter Sprigg of the Family Research Council, whose commentary merely complemented Savage☐s point of view and created a completely unbalanced discussion.

After a hiatus due to war coverage, Savage☐s show returned three weeks ago, seemingly under the same stringent content and caller screening as before. GLAAD contends that the show blatantly misrepresented the facts in his critique of AB 196. According to the California Fair Employment & Housing Act, which AB 196 would amend, employees or tenants that allege gender discrimination would have to meet the same high legal standard for allegations of discrimination on the basis of race, religion, sex and other categories. In fact, Sprigg, a longtime anti-gay activist, corrected Savage by informing him of the bill☐s allowance for employers to set acceptable dress code standards for transgender employees.

In addition, the program repeatedly contained footage of drag queens at pride celebrations, which GLAAD says served only to sensationalize the issue.

In an April 30 segment on MSNBC☐s Hardball with Chris Matthews, similar footage was shown during a debate between Sprigg and Mark Leno, the California state assemblyman who introduced AB 196. Following the airing of

the Hardball segment, GLAAD spoke with producers at MSNBC to register our concerns and were assured that the footage was inappropriate and would not be used in other primetime shows.

860. Houston-Hunks Gay Pride-- Black Gay Men's Call

Newsgroup: rec.radio.scanner
Date: 2003-05-20 18:55:17 UTC

A Black Gay Men's Call to Action to the Black Community
More than two decades have passed since the HIV/AIDS pandemic emerged. Despite advancements in other communities, the virus' progression among black people continues to quicken.

As a group of professional black gay men, we call on our community to join us in the fight to rid our community of this devastating disease. We come together from all walks of life to search for and implement solutions. We are elected officials and public servants. We are leaders in the world of music. We are businessmen, lawyers, artists, entertainment and media executives, and scientists. Despite our varied areas of expertise, our strength is our common vision. We are black men who refuse to remain silent while black people account for over half of all new HIV infections every year in the United States.

Our community must recognize that this is a state of emergency. We must each speak openly about living with HIV-whether or not we are infected, we are all affected. It is our collective responsibility to be informed and responsible.

- We must protect ourselves and our partners from the virus' continued spread.

- We must teach each other about HIV and AIDS and recognize that this is a preventable and treatable disease.

- We must get tested and encourage our partners, family and friends to do the same.

- If we are positive, we must get into treatment.

- And we must demand that we as a black community call upon our own resources and our government to take appropriate and targeted action to combat the epidemic in our communities.

Perhaps most crucially, we must engage every part of the black community in a coordinated effort to turn the tide. It is time for us to reject the paralyzing denial, stigma and homophobia promoted by a few lone voices. We must confront the socio-economic conditions that cause people to do drugs and exchange needles; challenge the lack of affordable medicine and treatment options available to many of us; dispel the myths and misinformation circulating in our communities; and alleviate the myriad issues that contribute to the spread of AIDS in black communities today.

We are calling on every black organization in America to add HIV/AIDS to its agenda. And we are asking every black man, woman, and child to make a

personal commitment to fight against HIV/AIDS in our communities.

Finally, it is time for black gay men to stand up and be counted. In order to participate in the healing of our community we must first heal ourselves. So we are joining together as one voice, one body, and under one spirit of love. It is through this union that our healing can begin. And so we invite our mothers, fathers, brothers and sisters to join us in a partnership to end this pandemic. Only through coming together can we end the plague sweeping through all quarters of black America. The power to save our lives ultimately lies in our own hands!

861. Houston-Hunks Gay Pride--Rescind Health Benefits for Gays

Newsgroup: rec.radio.scanner

The Colorado Springs City Council voted April 22 to rescind health and family-leave benefits for same-sex partners of city employees, just four months after it became the state's fifth city to offer such benefits. The 8-1 vote followed emotional pleas against the move from employees, residents and Councilman Richard Skorman, who was the lone dissenting vote. Skorman even offered to cover the expense for the first year out of his own pocket, with activists David Sellon II and the Rev. Nori Rost of Pikes Peak Metropolitan Community Church offering to cover the second and third years respectively. The estimated annual cost to the city is about $6,700 to cover six employees. The reversal demonstrates a sharp ideological shift in the Council since the April 1 election--last year the Council passed the resolution 5-4. Mayor Lionel Rivera, who promised in his recent campaign to discontinue the benefits, dismissed arguments that Colorado Springs should follow the lead of the increasing number of corporations that offer benefits to gay couples. "Those are corporate dollars," he told the Colorado Springs Gazette. "They certainly aren't taxpayer dollars." Several city employees expressed their disappointment with the Council's reversal. Julie Draper, who works for the city as a firefighter, said her family will leave Colorado Springs because of the Council's action. "I feel disrespected, I feel unappreciated--as a veteran, as a taxpayer, as a positively contributing member of this community," she said.

862. Houston-Hunks Gay Pride-- Jersey teen stabbed after telling assailant she was a Lesbian

New Jersey teen stabbed after telling assailant she was a Lesbian
Crime to be pursued as bias crime; vigil and protest planned

Early Sunday May 11, 15-year-old African American Lesbian teen Sakia Gunn was the victim of a fatal stabbing while waiting with four female friends for a bus in her hometown of Newark, N.J.

Police say that Gunn, who was returning from a party in Greenwich Village, was attacked by two men who pulled up to the bus stop in a van and started flirting. After she and her friends rebuffed the sexual advances by telling the men they were Lesbians, a shoving match began, and Gunn was stabbed and the two men fled the scene.

This week Newark police obtained an arrest warrant for a man they believed stabbed Sakia. Richard McCullough, 29, of Newark faces murder and weapons charges and bias intimidation charges. McCullough was identified by witnesses.

Gunn, a sophomore at West Side High School, was buried Friday. A viewing preceded the funeral. A vigil was held in Newark on Thursday at the corner of Broad and Market where Gunn was slain. Another protest is planned for May 16 in front of Newark City Hall to raise awareness about the state of New Jersey not having adequate laws to protect Gay rights. At both events, people will be wearing either white or rainbow colors that identify them as Gay.

"The local response to this murder has been overwhelming," said Michael Young, GLAAD's Northeastern regional media manager, "and it's encouraging to see the Newark community come out in support of this young woman. We hope media attention of this case will increase awareness of anti-Gay crimes in general. Journalists have the opportunity to not only cover Sakia's murder, but also explore hate crimes in a larger context."

863. Houston-Hunks Gay Pride-- Gay Animals are Coming Out of their Closets

Gay Animals are Coming Out of their Closets
Zurich Zoo Tour Focuses on Homosexuality in Animals
Mark Ledsom / Swiss Info.com

People who consider homosexuality to be ☐unnatural☐ might be forced to reconsider after a visit to Zurich zoo.

As part of the city☐s ☐Warm May☐ festival, the zoo is offering guided tours dealing with homosexuality among animals.

The crowd that gathered for the first tour comprised a predictable mix of homosexual humans and their curious heterosexual counterparts.

☐I have kids at school who think that homosexuality is unnatural,☐ one young teacher told Swissinfo, ☐so I wanted to come along and get some facts to prove them wrong.☐

Unfortunately the decision to schedule the tour for the early evening meant that most of the zoo☐s inhabitants were favoring sleep over any form of amorous activity. But, despite the lack of first-hand evidence, tour guide Myriam Schärz (pictured) assured her audience that gay and lesbian activity is a common part of animal life.

☐I don☐t know of any species that is exclusively heterosexual,☐ Schärz said. ☐There are studies of this going back hundreds of years, although scientists were previously reluctant to explore the matter further for fear that they would themselves be branded gay.☐

During the entertaining one-hour tour, Schärz recites evidence from American biologist Bruce Bagemihl☐s groundbreaking 1999 study ☐Biological Exuberance,☐ which documented homosexual activity in more than 450 animal species.

Visitors to the zoo learn about the indiscriminate and almost insatiable sexuality of bonobo apes. And re-runs of Flipper might never be the same again after hearing how gay male dolphins use their lovers☐ blowholes for sexual gratification.

But there are also anecdotes from closer to home. ☐Right here in Zurich we once had a gay flamingo couple who remained partners for life,☐ Schärz recalled. She pointed out other examples, including dominant silver-back gorillas who ☐have been seen engaging in homosexual activity and deliberately shunning available females.☐

☐Humans seem to be the only species where homosexuals are not readily accepted in society,☐ Scharz said. ☐Animal societies tend to stay together

and accept each other.☐

Skeptics and believers alike will be welcome at the zoo when the last two tours take place on May 28.

Top Gun Dilemma
QuestionMark?
Mark Rutherford LCSW

Versatile Guy Feels Limited by Bottom-Feeder Boyfriend

I□m versatile, and up until about four months ago, I also assumed my boyfriend was. But these days he will only top me and he refuses to bottom any more. I still have the desire to occasionally top a guy, and I□m not a complete bottom. So what do I do? I want to stay with Peter.

Dear Very Versatile,

It seems like you are going to have to bite the bullet and have a heart-to-heart conversation with your boyfriend. How long have you and your boyfriend been together? What was your sex life before this sudden change four months ago? Was there any discussion about why he decided to become a strict top with you? How often, if at all, did he let you top him before this change? And vice versa. How often were you the bottom before the change?

As you can see, I have a lot of questions. But so should you. When two people are in a relationship together, there should always be conversations if one partner decides to make some changes. Your boyfriend may have some very good reasons for modifying your sexual menu.

Infidelity, anger issues, medical problems, insecurity issues are the usual culprits. However, if he doesn□t inform you of what is going on in his head, he is doing you both a disservice. And if you just sit back and let this situation unfold around you, you aren□t helping either.

I say sit him down and talk with him about what you□re feeling. Make it a non-confrontational encounter□over coffee on a Sunday morning or having a glass of wine after work.

Let him know that you care about him and value the relationship but that you have some concerns about your sex life. Ask him point blank if something has happened for him, either emotionally or physically. He may be embarrassed or scared or angry. This is your chance to find out as well as an opportunity to offer him your support.

Once you get all the information, then start negotiating. Tell him you love being a bottom for him. Tell him he□s the best pitcher in the world. Then tell him you want him to be the catcher once in a while. See what he says, and then take it from there.

The last resort would be to open the relationship or to go outside the relationship to get your sexual needs met. These aren□t really solutions at all. They are just ways of escaping your feelings. Open relationships can be wonderful and fulfilling, but they have to be grounded in two people who are totally content with each other, and outside sex is seen as a recreation rather than a solution to an internal problem. Good luck.

Dear Mark,

Lately, I get hard at the drop of a hat. It doesn□t have to be sex; I can get hard watching TV. What□s wrong with me?

Signed, Jim

Dear Jim,

At the risk of oversimplifying this for you, you□re horny. Plain and simple. As a society we tend to pathologize even normal behaviors. Sex is normal. Wanting to have sex is normal. Being horny in general is normal.

If you have a sex partner or a f**k buddy, give him a call and make a time to get together. If there□s a certain place you like to go to meet men, go there and see who□s around. There might be another guy around who has the same thing as you in mind.

Or, the most trusted avenue is you and your right hand. Get out a bottle of lube (Eros is my favorite), pop in a video (love the new stuff from those talented guys at Titan), lay back on the couch and go to town.

Whatever method you choose to satisfy your needs, make sure you enjoy yourself to the fullest. Don□t worry about why you□re horny. As some wise philosopher once said, □Go with the flow.□ Indeed.

865. Houston-Hunks Gay Pride--Brown Executed for Gay Murder

Gary Leon Brown was executed by lethal injection April 24 for the 1986 stabbing death of a gay man. Brown, who was 44, initially told police that he and accomplices Archie Bankhead and James Lynn Bynum went to the home of Jack David McGraw on Memorial Day 1986 to drink with him, hoping that McGraw would pass out so they could rob him. When McGraw refused to drink with the men, they attacked him. Brown reportedly told police he stabbed McGraw repeatedly with a pocket knife. McGraw's body was left in his mobile home, where he lived alone, until it was found by neighborhood children. He had been robbed of $67 and several appliances. Although the murder was not prosecuted as a hate crime, prosecutors pointed to the savageness of the attack--Brown was stab-bed 78 times and his throat had been cut--as evidence that the motive was more than just robbery. Witnesses also testified that the killers used anti-gay slurs to describe McGraw as they boasted of killing him. Bankhead is currently serving a life sentence without parole for his part in McGraw's murder; Bynum also was convicted, but was paroled from a life sentence in 1997.

☐60s Sex Kitten Hisses at Gays
365gay.com

Onetime sex symbol Brigitte Bardot accuses gays, Muslim immigrants and fast-food chains for the ☐ruination of France.☐

In a new book which went on sale this week, the actress turned animal rights activist says gays should keep their sexuality quiet and be more like those of a generation ago.

She says of today☐s gay men ☐[They] jiggle their bottoms, put their little fingers in the air and with their little castrato voices moan about what those ghastly heteros put them through.☐

The 68-year-old Bardot, who appeared nude in a number of 1960s films, has nothing good to say about Paris prostitutes either.

☐Our lovely, kind street-walkers have been replaced by girls from the East, Nigerians, travelers, transsexuals, drag-queens, bearers of AIDS and other friendly gifts. Having a risk-free go is becoming a real exploit,☐ Bardot writes.

Her book, A Cry In The Silence, also contains numerous passages attacking Islam.

In politics, she likes President Jacques Chirac ☐as a human and a friend☐ but has little use for other politicians including gay Paris mayor Bertrand Delanoe.

867. Houston-Hunks Gay Pride-- Gay Film Fest Executive Director Resigns

Gay Film Fest Executive Director Resigns
Phillip Matthews Takes Job in New York
Mary Damiano

Carol Coombs and Phillip Matthews at the opening night of the 2003 Miami Gay & Lesbian Film Festival
---

Phillip Matthews, who stirred controversy last fall when he was named executive director of the Miami Gay & Lesbian Film Festival in the wake of the ouster of founder Robert Rosenberg, has resigned his position.

Matthews has accepted a position in New York with In The Life, the television program about the gay community seen on local PBS stations.

Although sources say Matthews made his decision about a month ago, at press time the MGLFF had not issued a statement about his departure. Carol Coombes, MGLFF program director, termed Matthews☐ departure as having ☐no acrimony☐ and that he did not want anything said during the fifth annual film festival, which ended May 4. Several sources said Matthews has family in New York and was eager to return to be close to them. ☐This is a no-news issue at this time,☐ Coombes said.

Matthews was not present at the MGLFF office Friday afternoon and he could not be reached for comment. Coombes said Matthews☐ official last day with the festival was Friday, May 16, but that he had taken the week of May 12 off.

☐We☐re very sad that he☐s leaving, but this is a terrific opportunity for him,☐ said Fran Levey, co-chair of the festival☐s board of directors. Levey told The Express that the organization does not plan to name an interim executive director, and that they will take this time to reassess their needs and perhaps amend the executive director☐s job description to fulfill those needs. ☐We☐re looking at this as a good opportunity for us to not rush ahead and hire a new director, without really taking a look at what the best structure is for us.☐

Board member Mark Gilbert echoed Levey☐s comments: ☐We have a really good plan in place that, at least for the short term, will save the festival some much-needed funds that we would normally be paying an executive director, and yet keep the festival going in a positive direction.☐ Gilbert said details of the plan will probably be released next week.

Gilbert said that although the festival knew about Matthews impending departure, their publicist has been working on a press release. ☐We didn☐t feel an absolute need to announce it right after the festival,☐ Gilbert said. ☐I think we all wanted to bask in the glory of an incredibly successful festival, and not have anything take away from the enormous success we achieved, in part due to Phil.☐

The Express asked Robert Rosenberg, who experienced a controversial break with the organization he founded, to comment on the timing of Matthews☐ departure. He said only that it takes about a month for the director and staff to complete the aftermath of a festival. When The Express asked about the possibility of rejoining the organization in light of this current development, Rosenberg said, ☐I think any future relationship I might have with the festival is so speculative and hypothetical it☐s hard to really comment on that.☐

Although Levey and several other board members said that the festival is in good shape, Harvey Burstein, former MGLFF board member and founding member of the organization, said that he☐s been asked on more than one occasion by several different board members to rejoin the board because it was in trouble. Burstein told The Express that he would consider rejoining the board in an advisory capacity to help get things back on course, and suggested several other community leaders who could help with that job.

Burstein took issue with the fact that the MGLFF knew Matthews was leaving for some time, but did not inform the community, even after the festival ended.

☐It☐s our festival, we pay for it, we support it and it belongs to the community,☐ Burstein said. ☐Whatever happens, good and bad, they have to share that with the community. We have to know what☐s going on. How is the community ever going to help unless we know what☐s going on☐unless they☐re hiding it from us.☐

I live in Calgary, and find it almost impossible to find a new
scanner. The dimwits at Radio Shack have to special order a
Trunktracker, and it takes about three weeks. They seem to have got
it into there heads that scanners are only used to listen to police.
Since Calgary Police Service went digital, Radio Shack has lost
interest in scanners. They do not seem to understand that the Fire,
EMS, Stars Air Ambulance, RCMP etc, are still analog. Some times I
see used scanners at pawn shops and in the Bargain Finder, here in
Calgary. But that is about it, new scanners are rare. The only I can
think of, is for him to contact some of the radio shops, such as
Commercial Radio, Elvey & Sones, etc. Sorry I could not be help.

Here you go, bucko.
No lie... most every country is a product of conquest.
The difference is that Israel is a democracy and mostly
uses military force to go in a capture (kill if necessary) the
cowards shits who strap bombs to themselves and blow
up people sitting in cafes.
Stop the homicidal bombers and Israel will pull out.

I have used them for years...Radio Shack, Icom, and others. I have come to the conclusion they all hear equally poor in all directinons. I am presently using a Diamond Discone with an Icom IC-PRC1000. Make sure you get a model with the top-hat, or upper element for the low band frequencies. pcox, K4AVO

Actually the correct term is 'Homicidal Bomber'
Their goal is to murder innocent Jews for the shock effect
not to kill themselves. (Which would be great if they did)
Punish entire families. Huh? They don't bulldoze down those
houses for the fun of it. Those Arab cowards use and hide in
these houses and this technique helps alleviate this. Why
unnecessarily endanger a Jew's life to root out a terrorist
coward.
They Pale. know how to go down the road which would allow them to
live in a civilized country. But their leaders don't want to or aren't
motivated enough to arrest the terrorist cowards.

No. You should think of it as a 2-D (not 3-D) uniform sensitivity
antenna. It has zero sensitivity straight up or straight down, and
uniform sensitivity to the horizon in any compass direction.

No. What you are describing is called an isotropic antenna. Think of it
as
a point source located in free space. Doesn't really exist other than as
a
engineering model.

When you go from this isotropic to a "real" antenna then more of the
energy
is radiated this way and that and much less over here and back there.
Thus the real antenna has some gain in selected direction(s).

The desired pattern for the omni non directional antenna is a hot cake
shape
centered on your location, extending out toward the horizon in all
directions.
With pronounced nulls pointed down into the earth and up into the sky.

House Warming
Gay Minister Delivers Prayer on Capitol Hill

By Bob Roehr
Given the general attitude toward the gay community in the U.S. House of Representatives, many noted the irony involved when the Rev. Steve Torrence stepped to the podium of the House to deliver the opening prayer on May 1. He was the first clergyman from the worldwide Metropolitan Community Churches (MCC)--which primarily ministers to LGBT people--to have the honor, and is believed to be the first openly gay person to deliver that prayer.

Torrence wore the crisply pressed uniform of the Key West (Fla.) Police Department, where he serves as a police officer and chaplain. He is a former pastor of the MCC Church in Key West.

May 1 is the official date of the U.S. National Day of Prayer, as well as Law Day. Both celebrations were created in part as a backlash against May Day celebrations, which came from pagan rituals.

And while the religion-tinged rhetoric of Sen. Rick Santorum, R-Pa., still swirled on Capitol Hill, a further irony was that Torrence's invitation to deliver the prayer came from a Republican--Rep. Ileana Ros-Lehtinen, who represents southern Florida, including Key West.

"It is important to have diversity in Congress and it is important to understand that sexual orientation does not determine one's faith," she said.

Torrence's prayer was appropriately short and included the lines: "As a nation, let us remember that all people have one common origin. Fill our hearts with compassion for our neighbors and the desire to ensure justice for all. ... Let us always remember that despite our differences, we are one human family."

The Rev. Troy D. Perry, founder and moderator of the international denomination, said the prayer marked "yet another significant milestone in MCC's ongoing quest for equal rights for gays and lesbians at every level of government."

He noted that MCC recently was authorized to provide chaplains for the Veterans Administration, and its application to provide similar services to the armed forces is moving forward.

882. Houston-Hunks Columbus Tx Chapter--'Naked' truth: Gay sex comedy delivers lads alone

Newsgroup: rec.radio.scanner
Date: 2003-05-21 00:18:55 UTC

'Naked' truth: Gay sex comedy delivers lads alone

By Michael Upchurch
Seattle Times staff

It ain't the script ☐ it's the Lad Factor.

At least that's how it's supposed to work in this nudity-splashed gay sex comedy from the writing-directing-producing team that brought "Making Porn" to Seattle a few years ago.

The formula goes like this: 1) Hire a gay-porn actor as your marquee draw; 2) Throw in some actual thespian talent that's willing to disrobe and not too hard on the eyes; 3) Collect a surprising amount of money at the box office.

"10 Naked Men" delivers the porn star: Rocky (no last name ☐ but he advertises his cellphone number in the program). And it features a couple of animated performers who have clearly put in time at both drama school and the gym. But Lad Factor alone just isn't enough to keep things going when burdened with a script that's this flimsy ☐ or should I say flaccid?

Theater review

"10 Naked Men," written and directed by Ronnie Larsen. Thursdays-Sundays through June 8, Theater Off Jackson, 409 Seventh Ave. S., Seattle; $25-$30 (866-468-3399 or Ticketweb.com).

The plot: Aspiring actor Robert (Preston Lee Britton) moves from Seattle to Los Angeles, but can't find work or a boyfriend ☐ although he does find a hustler willing to fulfill his prison-rape fantasies. Meanwhile, aspiring actor Richard (Irwin Gallan) is also looking for gigs in L.A. ☐ and paying the bills by doing some hustling on the side. And, in a last hustler-scenario twist, Steve (Rocky) is servicing clients all over town, while experimenting with having a steady boyfriend on the side: Robert's best friend, Kenny (Finn Walker).

A number of agents and johns (it's hard to distinguish between the two) camp it up big-time as they thirst after and manipulate these youngsters. Various sexual fetishes are touched on. Scenes race by. Actors dash on and off stage. The woes of sleazy showbiz are lightly examined.

A few lines hit the mark, with Robert's instructions at an audition for a commercial providing the show's wittiest moment: "Try to discover that the ice cream is good. Don't already know it." A more representative snippet of

dialogue: "This is L.A. ☐ everyone's for sale." (Yes, but are they returnable?)

As for the performers: Nature blessed Rocky with a tidy little physique, but someone needs to teach him how to enunciate. Gallan has some good moments as a talentless hunk who thinks his walk-on appearance in "A Few Good Men" can be parlayed into a screen career. The rubber-faced Britton is the one actor onstage who keeps the whole mess from being insufferable, especially in an extended scene in which he twists himself in knots of anxiety while calling his first hustler.

Still, that's not a recommendation. The truth is: You can have all the Lad Factor you like. But if those lads don't have a decent script to follow, even the most chiseled pectoral will start to look lifeless.

883. Houston-Hunks Columbus Tx Chapter--Peace, gay groups blocked from parade

Newsgroup: rec.radio.scanner
Date: 2003-05-21 00:18:55 UTC
From: SLee@houston-hunks.com
Message-ID: <FXENG53Z37762.0962037037@Gilgamesh-frog.org>

Peace, gay groups blocked from parade
EVENTS: Entries must be entertaining, not political, chamber says.
Mark Porter, The Bellingham Herald

A local anti-war group is questioning the motives of Ski to Sea Grand Parade officials after learning both it and a local gay and lesbian support group won't be among the hundreds of participants on Saturday.

Ski to Sea parade officials rejected the Whatcom Peace and Justice Center's entry, "Whatcom Neighbors for Peace," telling its leaders the entry lacks "high entertainment value" in a popular annual parade already filled to capacity.

The anti-war group and Whatcom County Parents, Families and Friends of Lesbians and Gays (PFLAG) were among about 20 entries that were denied for space constraints and/or lack of entertainment value, said Mike Brennan, president of Bellingham/Whatcom Chamber of Commerce & Industry.

Others who were denied include the Bellingham Bells baseball team - which wanted to run a team bus through the downtown Bellingham parade route - and the Whatcom County Chapter of the American Red Cross, said Brennan, whose organization runs Ski to Sea events.

No political party entries or candidate floats are allowed in the parade, where the prevalent theme is entertainment, Brennan said.

"This is not an event for statements," Brennan said. "This is a stage play. It has to be entertaining. That's the whole key to it."

Pro-peace entry

Anti-war activists say they are dismayed their pro-peace entry with 100 participants with a theme, "Peace in our Heart - Peace in our World" was rejected. The group planned balloons depicting peace doves and the Earth as well as stenciled signs with the name of a participant's neighborhood or community.

It was the first time the group has applied for a permit, said Jamie Donaldson, coordinator of Whatcom Peace and Justice Center.

"I think folks in our peace community will be interested in what groups will be allowed in the parade," Donaldson said on Monday. "We will be looking for veteran presence or American patriotic signs - our statement for peace was refused."

The group made the May 2 entry deadline cutoff and Donaldson phoned and contacted the chamber several times during the next seven to 10 days. She learned the entry was denied late last week, she said.

"There may be nothing to this all," she said. "But folks want to know why 'Peace in our Heart, Peace in our World' is not an acceptable application."

Entries that include any political, religious or social issues are at the discretion of the parade committee, according to entry fine print, Donaldson said. The Bellingham Unitarian Fellowship will have an entry, she said.

"This was not an anti-war parade," she added. "It was a pro-peace parade. Folks in the peace community are interested in learning ... is there any pattern to keep voices out of our civic parades?"

Local PFLAG leaders were unavailable Monday to comment on the group's rejection.

Possible appeal

Bellingham attorney Larry Hildes is looking into possible ways to appeal the decision.

The group's entry is neither obscene nor inflammatory and the chamber's decision could be considered illegal since public money is being used to fund the parade, Hildes said.

"(The Whatcom Peace and Justice Center) board is extremely upset and wants the Chamber of Commerce to rescind the decision," he said.

The city of Bellingham gave the chamber about $34,000 for Ski to Sea events this year, according to city Deputy Administrator Don Keenan.

The chamber has spent the last years trimming entries, Brennan said. In the past, car clubs had 35 to 40 cars in the parade, now they are limited to four or five, he said. A longtime Christian group entry with religious signs was rejected several years ago, he added.

Brennan has some suggestions for the PFLAG and peace activists: "redesign your system and apply next year."

884. Houston-Hunks Columbus Tx Chapter--President Continues to Push Anti-Gay Nominees for Federal Courts

Newsgroup: rec.radio.scanner
Date: 2003-05-21 00:18:55 UTC
From: SLee@houston-hunks.com
Message-ID: <QVBTKJ8W37762.0962037037@Gilgamesh-frog.org>
Source record: 30963

By Aslan Brooke

Once again a Bush nominee for a federal judgeship has stirred all manner of controversy. This time, the man in question--Alabama Attorney General Bill Pryor, nominated to sit on the 11th U.S. Circuit Court of Appeals--seems to be on the same page as Sen. Rick Santorum, R-Pa., when it comes to comparing homosexuality to such aberrant behaviors as pedophilia, bestiality and, incredibly, necrophilia.

Pryor's unflattering opinion found its way into a friend of the court brief he wrote in February in response to the U.S. Supreme Court's decision to hear the landmark Texas sodomy case Lawrence v. Texas. Having appeared two months before Santorum's equally disturbing comparisons (which added bigamy and polygamy to the mix), Pryor's brief, which was also signed by attorneys general from South Carolina and Utah, argued that the Texas statute only forbids same-sex acts, not sexual orientation. He further argued that homosexual acts are "historically recognized as wrong."

"Petitioners' protestations to the contrary notwithstanding, a constitutional right that protects 'the choice of one's partner' and 'whether and how to connect sexually' must logically extend to activities like prostitution, adultery, necrophilia, bestiality, possession of child pornography, and even incest and pedophilia (if the child should credibly claim to be 'willing')," he wrote.

Gay-rights groups have vociferously argued against Pryor's confirmation, among them the Gay and Lesbian Alliance Against Defamation (GLAAD). According to GLAAD spokeswoman Cathy Renna, "If his personal views are going to in any way influence the way he passes judgment on cases before him, I would be really nervous if I was a gay or lesbian person who had an anti-discrimination case where Pryor was the judge."

Even gay Republicans are wary. The Associated Press quoted Log Cabin Republicans Executive Director Patrick Guerriero as saying, "Clearly the arguments put forth in [Pryor's] amicus brief reflect a true misunderstanding of a large segment of the American family in gay and lesbian relationships."

In the Senate, noticeably outspoken was New York Democrat Charles Schumer, who sits on the Judiciary Committee that will consider Pryor's nomination. Terming Pryor's brief "another red flag for a nominee who is starting out with a troubling record," Schumer said, "It's hard to believe that in the entire state of Alabama, the administration can't find a conservative to nominate who isn't out of the mainstream and doesn't make incendiary

comments."

Republicans--and some Democrats--have rallied around Pryor, even though he has already been under scrutiny because of his opposition to abortion rights. Despite this, and the revelation of his indisputably anti-gay comments, opposition is expected to be anemic because of his influence in Alabama, although 16 civil-rights leaders, including Martin Luther King III, have come out against him.

But Pryor's key base of support comes from the far right. One of Pryor's most ardent defenders is Jay Sekulow, executive director and chief counsel of the right-wing, Virginia Beach, Va.-based American Center for Law and Justice (ACLJ), founded in 1990 by anti-gay televangelist Pat Robertson. The legal advocacy group bills itself as being "dedicated to defending and advancing religious liberty, the sanctity of human life, and the two-parent, marriage-bound family."

The ACLJ is a strong supporter of school vouchers, supports funding of faith-based social services and religious proclamations in the public domain, and often equates religious expression with patriotism, according to the constitutional watchdog group People for the American Way (PAW).

According to PAW, the ACLJ strongly opposes "the right to legal, safe abortion and provides legal help to pro-life protesters who harass women seeking reproductive services." Likewise, the ACLJ challenges domestic-partnership benefits for city and state employees, anti-discrimination ordinances that include sexual orientation, and generally fights against the right of gays and lesbians to be parents.

At press time, Pryor's confirmation hearings have not yet been scheduled.

The 11th Circuit oversees cases in Alabama, Florida and Georgia.

Meanwhile, another judicial controversy has been defused: U.S. Attorney Michael Mosman, the Bush administration's top candidate for a District Court seat in Portland, Ore. Mosman declared that he opposes sodomy laws and treats gays with "respect and civility and tolerance.''

In an interview with the editorial board of The Oregonian on May 1, Mosman said he was not expressing his personal views in 1986 when he wrote legal memos as a Supreme Court clerk that opposed overturning a Georgia sodomy statute in the Bowers v. Harwick case.

Mosman met privately in late April with officials from two gay-rights groups in Portland to assure them he is not biased against gays, according to the newspaper.

He said that if he were a legislator, he would have voted against Georgia's sodomy law. He added that he voted against the 1992, 1994 and 2000 anti-gay ballot measures sponsored by the Oregon Citizens Alliance.

Mosman has the support of Sens. Gordon Smith, R-Ore., and Ron Wyden D-Ore., as well as the Washington, D.C.-based Human Rights Campaign. HRC Political Director Winnie Stachelberg told the Associated Press that she was pleased

that Mosman was
"willing to engage in a dialogue and answer questions."

Mosman's answers--in which he drew distinctions between his 1986 memo and his current views--"have given us some comfort," Stachelberg told the wire service.

The Republican Party's 'gay problem'

The Republican Party has a "gay problem" that could complicate President Bush's re-election prospects. Bush wants to be moderate on gay issues, and that makes right-wing activists furious. Democrats and gay activists thought Bush was caving in to the right when his press secretary defended Sen. Rick Santorum (R-Pa.) as "an inclusive man" after he likened legalizing gay sex to legalizing incest and bigamy.

Right-wing groups condemned the statement as "tepid," demanding a full-blown defense of Santorum's argument, and accused GOP leaders of "pandering to the homosexual lobby." Ken Connor, president of the Family Research Council, wrote that "if Republican leaders cannot mount a vigorous defense of marriage, then pro-family voters perhaps should begin to reconsider their loyalty to the party."

The right has a catalog of complaints with Bush policy on homosexuality ☐ from White House and top-level GOP meetings with gay groups to Bush's signing a District of Columbia appropriations bill that funded benefits for unmarried domestic partners ☐ and more points of conflict can be expected Even Connor expects the Supreme Court will shortly overturn the 1986 decision that Santorum cited as the basis for his argument.

Already, right-wing groups are angry that the administration declined to submit an amicus brief in the case before the court, Lawrence v. Texas, that challenges Texas' law criminalizing sex acts between homosexuals. Meanwhile, a case in the Massachusetts Supreme Court and a bill in the Legislature may revive the issues of homosexual marriage and civil unions. And there's likely to be a major dustup in September 2004 over the Republican Party platform.

In 2000, the right successfully inserted language declaring that "we do not believe sexual preference should be given special legal protection or standing in law." The Democratic platform called for enactment of national hate crimes and employment anti-discrimination laws to protect gays and "equitable alignment of benefits."

This year, six of the nine Democratic presidential candidates support state enactment of civil union laws. Patrick Guerriero, director of Log Cabin Republicans, the GOP group representing gays and lesbians, says that at next year's convention "it could get real tense between the far right and the East Coast wing of the party, particularly because it's in New York and the state's governor and the city's mayor have histories of being against discrimination."

Guerriero said, "There will be one day at the convention where the party decides where it stands on our issues. We'd like it to be inclusive and not ugly, but my guess is that no matter what the platform says, there will be demonstrations." (Disclosure: I spoke to the Log Cabin Republicans at their convention last weekend and received an honorarium.)

There's wide agreement ☐ on the right and among gay-rights groups ☐ that the Bush White House and GOP leaders are "walking a fine line" or "trying to have it both ways" or "triangulating" on gay issues.

"They're caught between the base and the need to be seen as moderate," said David Smith, communications director of the Human Rights Campaign, a gay-rights group. "What you're seeing is triangulation," he said, using the term applied to President Bill Clinton when he distanced himself from liberal Democrats dominant in Congress in order to win re-election.

On the right, similarly, Connor said, "There is clearly, at the highest levels within the Republican leadership, a calculated strategy to embrace the gay agenda and promote that agenda. They think they need to take this position to endear the party to soccer moms and immunize it from criticisms in the media and appear to be a kinder, gentler White House."

Connor said he did not know whether Bush was party to the strategy, but he said that "the White House does not embark on any strategy without Karl Rove's approval," referring to Bush's top political operative. GOP moderates argue ☐ accurately ☐ that attitudes on gay issues have become dramatically more tolerant since 1986, when Chief Justice Warren Burger declared that homosexual acts were "of deeper malignity than rape."

Gallup polls show that in 1986, Americans favored keeping gay sex illegal by a margin of 57 percent to 32 percent. In 2002, they favored its legality by 52 percent to 43 percent. The party's political problem is this: About 4 million self-identified gays went to the polls in 2000, 1 million of whom voted for Bush. Historically, other GOP candidates have garnered up to one-third of the vote. A reputation for inclusiveness and tolerance could also help the GOP among moderate suburbanites who reel from "culture war language."

On the other hand, as Connor put it, "Karl Rove himself complained (at a 2001 American Enterprise Institute event) that 4 million fundamentalists and evangelicals didn't turn out in 2000, almost costing Bush the presidency."

Which way will the party tilt? It's not a good sign that Mary Matalin, former aide to Bush's father and to Vice President Cheney and a figure identified by the right as part of the pro-gay movement in the GOP, defended Santorum extravagantly last Sunday on "Meet the Press."

886. Houston-Hunks Columbus Tx Chapter--Church Kicked Out of Association for Baptizing Gay Men

Membership Has Its Disadvantages
North Carolina Church Kicked Out of Association for Baptizing Gay Men

A Southern Baptist church in Concord, N.C., has been expelled from a religious association after the pastor baptized two gay men and welcomed them into the congregation. Leaders of the Cabarrus Baptist Association--a regional group of 81 churches affiliated with the Nashville, Tenn.-based Southern Baptist Convention--overwhelmingly agreed in a closed meeting April 28 to sever ties with McGill Baptist.

Of 268 delegates at the meeting, 250 voted to withdraw McGill Baptist's membership. The Rev. Randy Wadford, the association's missions director, read a statement after the vote in which he said, "The homosexual lifestyle is contrary to God's will and plan for mankind."

The Rev. Steve Ayers, the McGill pastor, said being kicked out of the association doesn't have many practical implications. The 800-member church had contributed to the association's food and clothing projects, but would find a new way to help the poor, he said. "The kingdom of Christ is about love, about God's grace and mercy," Ayers said. "When a church becomes so judgmental that it can't accept people into their fellowship, it is a sad, sad day."

Speakers at the meeting illustrated the divisions between churches that want to include gays and those that don't. Wanda Ritchie, a lifelong member of McGill, told the association that the church was for everyone and it was "almost unthinkable" for the association to seek to control the membership policy of one church.

Ayers said the two gay men have declined comment, preferring to stay out of the spotlight. As much as the men are upset over the furor, Ayers said they are glad to have found a church. They both attended Sunday Services on April 27. When it came time for worshippers to sign the register and mark whether they were members of McGill Baptist, he said, one of the men wrote "Oh yes."

887. Houston-Hunks Columbus Tx Chapter--Binational Gay Couple Make Their Relationship More Permanent

No More Question Marks
Binational Couple Make Their Relationship More Permanent

After months of anguish and uncertainty, one Los Angeles-area same-sex couple finds their relationship has taken on the stamp of legal permanence. Marco Aurelio, a Brazilian citizen, recently found out he was granted political asylum in the United States due to his sexual orientation. Although the move was welcome news to Aurelio, it meant just as much to his partner, Doug Haxall, who no longer had to worry about his boyfriend being deported.

"It's completely changed everything," Haxall said of Aurelio's new status. "We were fighting this struggle for a long time. You have this sense of impermanence in the relationship. It was a financial hardship. We couldn't make plans for the long term, really."

Although Haxall and Aurelio's story has a happy ending, the details of their relationship show how difficult it is for binational same-sex couples to go about making their relationships stable, and how legal anomalies and loopholes mean the difference between being together and facing a life apart.

When Haxall and Aurelio first met at the 1998 West Hollywood Halloween festival, they knew there was an attraction, despite a significant language barrier. But they were determined to make their relationship work, even if it meant in the beginning they had to struggle to communicate. The pair soon found out English was the least of their problems, as Aurelio tried to take steps to get the legal protections needed for a noncitizen to stay in the country.

Aurelio came to the U.S. on a tourist visa, but knew after meeting Haxall he wanted to stay with the man who had quickly become a part of his life. The two decided to move in together, and Aurelio made the snap decision to apply for a student visa, which meant the two men decided to make their relationship more permanent despite the struggles to communicate.

Luckily, Haxall could help Aurelio financially with English-language classes and cosmetology schooling, which are expensive for international students. Still, there was a level of stress involved, because Aurelio continued to face deportation if he left school. It was then that Aurelio applied for permanent status based on his sexuality.

"You have to fill out a lot of paperwork," Haxall said. Aurelio then had to meet with an immigration agent, who studied the details of his case.

Despite all the roadblocks, Aurelio's life was made easier by the change in his legal status.

"If you're illegal, it is a much more dangerous process," Haxall said. "You go before a judge and he can deport you."

Ally Bolour, who represented Aurelio in his petition for asylum, said getting permanent status is ultimately decided on a case-by-case basis. "If you can show there was past persecution or credible fear of future persecution," Bolour explained, "then you can get it."

Citizens from countries like Malaysia, Myanmar (Burma) and Indonesia all have an easier time proving their governments have active policies that discriminate against gays and lesbians, but petitioners from places like the U.K. or the Netherlands are unlikely to be successful.

"If the person is from Western Europe, they won't get asylum," Bolour said. He also noted that Mexican petitioners face new hurdles since their country's laws have been changed to be more inclusive. "Mexico cases aren't good anymore because Mexico doesn't persecute as much."

With its famed Mardi Gras celebrations and Rio's reputation for wild gay fun, Brazil seems an unlikely candidate for a country that persecutes gays and lesbians, but Bolour pointed out that the experience of American and European tourists on vacation is not the same as the experience for the average gay or lesbian Brazilian.

"If you're Brazilian and you're gay, there is a lot of societal discrimination that applies," he said.

The ability to get asylum based on sexual orientation is relatively new. As late as 1991, gays and lesbians were excludable based on medical grounds, which classified gay people as inferior or having a mental defect. A 1990 law dropped the exclusion of gays looking to emigrate, but depending on the local Immigration and Naturalization Service offices, sympathy for same-sex asylum cases varied. In 1994, then-Attorney General Janet Reno issued stronger regulations, giving all courts and immigration offices universal standards for the treatment of gay and lesbian asylum seekers, making life much easier for people like Aurelio. Haxall pointed out that same-sex couples still have far more obstacles facing them than straight couples, who can easily sponsor their spouse and are more likely to get a decision that goes their way.

Haxall and other binational gay and lesbian couples are trying to change that. Despite significant challenges from conservatives and scared progressives who don't want to vote for anything that even looks pro-gay, the Permanent Partners Immigration Act, which would grant permanent residency status to same-sex partners of American citizens, has over 100 co-sponsors in the House of Representatives, as well as the support of the American Immigration Lawyers Association.

"We're kind of ahead of schedule," Haxall said, noting that both Democratic and Republican members of the House have signed up to sponsor the bill,

which was first introduced in the last session of Congress by U.S. Rep. Jerrold Nadler, D-N.Y. "We are trying to get it in the Senate this year."

At least for Haxall and Aurelio, life has gotten much easier since their relationship is no longer a legal question mark.

"The sense of fear is kind of gone," Haxall said. "We couldn't grow that much as individuals. Now that's all lifted."

888. Houston-Hunks Columbus Tx Chapter--Pro-Nuclear, Anti-Gay

Newsgroup: rec.radio.scanner
Date: 2003-05-21 00:18:56 UTC

Pro-Nuclear, Anti-Gay
ACLU of Southern California Sues Adoption Agency, Charging Discrimination

The American Civil Liberties Union of Southern California on May 1 filed a lawsuit against the Orange County-based Olive Crest, a foster family and adoption agency, for discriminating against a lesbian couple who sought to become certified as a foster family, with the goal of adopting children in foster care.

Olive Crest is licensed and regulated by the state, receives federal, state and county funds, and has contracts with four California counties to recruit, train and certify foster and adoptive families and to place foster children with these families.

"California law and regulations clearly state that foster care and adoption agencies must treat married, unmarried and same-sex couples equally," said Martha Matthews, Bohnett Attorney with the ACLU. "Olive Crest wants to give preference to what it calls 'traditional, nuclear' families. But since Olive Crest contracts with the counties, accepts taxpayer funds, and is part of the state's and the counties' system of care for foster children, it cannot discriminate."

In July 2002, Shannon Rose, a doctor, and her partner, Jane Brooks, a law student, applied to become certified as foster/adoptive parents with the goal of adopting foster children. The couple received repeated assurances from Olive Crest that they would be treated fairly. They filled out numerous forms, were fingerprinted, and went through the extensive home-study process required for certification. They were told by their Olive Crest social worker that their home study was fine, and they had been 'pre-certified' as foster/adoptive parents.

Then, in September 2002, they were told that their adoption process had been suspended and were informed of Olive Crest's new Foster Family Recruitment Policy. The new policy stated that Olive Crest "prefers to place children with nuclear families," and that "other applicants will be considered on a case-by-case basis." The policy also stated that Olive Crest would refer applicants whose qualifications "do not agree with Olive Crest's values, guiding principles or treatment philosophy" to other agencies. Rose and Brooks were told by their former social worker at Olive Crest--who quit her job over the agency's handling of their case--that this policy was specifically intended to allow for discrimination against gay and lesbian couples.

"We were devastated when we heard Olive Crest planned to stall our certification process," Rose said. "The ones who suffer the most, though,

are the children who are waiting for a place to call home."

Attorneys from the San Diego office of the law firm of Heller Ehrman White & McAuliffe are working with the ACLU in connection with the case and are & representing the couple pro bono.

889. Houston-Hunks Columbus Tx Chapter--Homosexual age of consent bill under debate

Homosexual age of consent bill under debate
By Tim Dick
May 20 2003

The Gay and Lesbian Rights Lobby has labelled the different ages of consent for gay and straight sex as "a blatant piece of state-sanctioned discrimination on the grounds of sexuality" and called on those MPs opposed to equalising it to "understand the detrimental impacts of this law."

Debate on legislation to equalise the age of consent for heterosexual and homosexual sex begins today in State Parliament. It is the third try to lower the consent age from 18 to 16 for gay men, the same age as for straight men. New South Wales is the only state not to have an equal age of consent but voting is expected in the lower house this week on the government bill before it takes on the less receptive upper house.

The Lobby was joined today by the Aids Council of NSW (ACON) and FPA Health, formerly Family Planning, to back the bill's passage. All three groups said the current situation had a detrimental effect on the health of young gay men and needs to be changed.

The Lobby's Co-Convenor, Rob McGrory said: "Western Australia has recently equalised the age of consent. "The world hasn't ended there. The sky hasn't fallen. There is no harm, there is only benefit in equalising the age of consent."

McGrory also sought to distance the Lobby from concerns critics have about the risk of child sex abuse. "Gay men aren't pedophiles. The age of consent is about consensual sexual relationships. It's about ensuring a fair go for everyone in New South Wales."

advertisement

advertisement

Both Labor and Liberal parliamentarians are free to vote on the measures as a matter of conscience, although National Party members have decided to oppose the bill as a block. McGrory said the Lobby was hopeful of the bill passing but that "the health and welfare of young gay men should be a matter of government policy."

ACON CEO, Stevie Clayton, said the current position prevented health workers giving safe sex information out and discouraged young gay men from accessing health services, "which means they don't get information about HIV/Aids and other sexually transmitted infections until, in some cases,

it's too late for them," she said.

"It leads to low self esteem which increases rates of drug and alcohol and tobacco use and unfortunately it also leads to much higher rates of youth suicide. We're talking about 300 times more likely to commit suicide than their heterosexual peers," Clayton said.

Opponents of the bill have suggested raising the age of consent for heterosexual sex to 18 as a way to get equality. That idea did not wash with Margaret Hansford from FPA Health, formerly Family Planning.

"We believe that's a totally unrealistic proposal and it would be ridiculous if it weren't such a serious issue. We know from the recent Sex in Australia survey that young people begin sexual activity at about the age of 16 years. That sexual activity is already occurring and what would happen ... is that it would criminalise those young people as well," Hansford said.

An 18-year-old gay man, Daniel, joined the three groups at state parliament today and said the current laws were ineffective and stopped him accessing health services.

"The unequal age of consent didn't stop me having sex. It didn't stop me being active. However, it did stop be accessing services like FPA and ACON offer. It made a really hard part of my life even harder."

Daniel said that the parliamentarians considering the legislation were "predominantly heterosexual white males" that were not effected by the legislation. He called on them to "speak to a few a young gay guys in the community who are 17 and coming out and have this idea that for them to be sexually active and for them to have a partner who they're in love with and want to have sex with for it to be illegal."

890. Houston-Hunks Columbus Tx Chapter--Bush Wants it Both Ways on The Gay Front

Newsgroup: rec.radio.scanner
Date: 2003-05-21 00:31:57 UTC
From: SLee@houston-hunks.com
Message-ID: <MZM2MCS437762.1042013889@Gilgamesh-frog.org>

Bush wants it both ways on gay front

The Republican Party has a "gay problem" that could complicate President Bush☐s re-election prospects. Bush wants to be moderate on gay issues, and that makes right-wing activists furious.
Gay activists thought Bush was caving in to the right when his press secretary defended Sen. Rick Santorum, R-Pa., as "an inclusive man" after he likened legalizing gay sex to legalizing incest. Right-wing groups condemned the statement as "tepid," demanding a full-blown defense of Santorum, and accused GOP leaders of "pandering to the homosexual lobby."

Ken Connor, president of the Family Research Council, wrote that "if Republican leaders cannot mount a vigorous defense of marriage, then pro-family voters perhaps should begin to reconsider their loyalty to the party."

The right has a catalog of complaints with Bush policy on homosexuality ☐ from White House and top-level GOP meetings with gay groups to Bush☐s signing a District of Columbia appropriations bill that funded benefits for unmarried domestic partners ☐ and more points of conflict can be expected

There☐s likely to be a major dust-up in September 2004 over the Republican Party platform. In 2000, the right successfully inserted language declaring that "we do not believe sexual preference should be given special legal protection or standing in law." The Democratic platform called for enactment of national hate crimes and employment antidiscrimination laws to protect gays and ensure "equitable alignment of benefits."

This year, six of the nine Democratic presidential candidates support state enactment of civil union laws. Patrick Guerriero, director of Log Cabin Republicans, the GOP group representing gays and lesbians, says that at next year☐s convention "it could get real tense between the far right and the East Coast wing of the party, particularly because it☐s in New York and the state☐s governor and the city☐s mayor have histories of being against discrimination."

Guerriero said, "There will be one day at the convention where the party decides where it stands on our issues. We☐d like it to be inclusive and not ugly, but my guess is that no matter what the platform says, there will be demonstrations." (Disclosure: I spoke to the Log Cabin Republicans and received an honorarium.)

There□s wide agreement □ on the right and among gay-rights groups □ that the Bush White House and GOP leaders are "walking a fine line" or "trying to have it both ways" on gay issues.

"They□re caught between the base and the need to be seen as moderate," said David Smith, communications director of the Human Rights Campaign, a gay-rights group. "What you□re seeing is triangulation," he said, using the term applied to President Bill Clinton when he distanced himself from liberal Democrats in order to win re-election.

On the right, similarly, Connor said, "There is clearly, at the highest levels within the Republican leadership, a calculated strategy to embrace the gay agenda and promote that agenda. They think they need to take this position to endear the party to soccer moms and immunize it from criticisms in the media and appear to be a kinder, gentler White House."

Connor said he did not know whether Bush was party to the strategy, but he said "the White House does not embark on any strategy without Karl Rove□s approval," referring to Bush□s top political operative. GOP moderates argue, accurately, that attitudes on gay issues have become dramatically more tolerant since 1986, when Chief Justice Warren Burger declared homosexual acts were "of deeper malignity than rape."

Gallup polls show that in 1986, Americans favored keeping gay sex illegal by a margin of 57 percent to 32 percent. In 2002, they favored its legality by 52 percent to 43 percent. The party□s political problem is this: About 4 million self-identified gays went to the polls in 2000, 1 million of whom voted for Bush. Historically, other GOP candidates have garnered up to one-third of the vote. A reputation for inclusiveness and tolerance also could help the GOP among moderate suburbanites who reel from "culture war language."

On the other hand, as Connor put it, "Karl Rove himself complained (at a 2001 American Enterprise Institute event) that 4 million fundamentalists and evangelicals didn□t turn out in 2000, almost costing Bush the presidency."

Which way will the party tilt? It□s not a good sign that Mary Matalin, former aide to Bush□s father and to Vice President Dick Cheney and a figure identified by the right as part of the pro-gay movement in the GOP, defended Santorum extravagantly on "Meet the Press."

The discone is a great antenna for scanners. The Diamond is an excellent (I'm told) version .. however it may be out of your price range.

I don't know if you'll find any in your price range. You could try making one from scratch and see how it works. I won't be a pretty as the commercial versions but it might work anyway.

Richard in Boston, MA, USA

Be careful - A few years ago I took a small digital portable on a Caribbean Cruise and one day ensconsed myself in a inconpicuous corner of the highest deck with the radio, a headset and a notebook.

The following day it became apparent that I was getting more than my share of attention from the crew and it eventually came out that I had been observed wearing a headset, punching munbers into a small gadget with an antenna and writing things down in a notebook. The crew came to the conclusion that I was some sort of espionage person, CIA or some similar organization and refused to believe other wise! There was a fair amount of "wink-wink nudge-nudge" going on when I was around.

I have often wondered if the ship had been of some foreign registry, or had stopped at certain other ports, if I might have received more serious attention than just being a source of curious speculation.

Dave

897. Houston-Hunks Columbus Tx Chapter--Gay-Straight club stirs up parents

Newsgroup: rec.radio.scanner
Date: 2003-05-21 10:27:10 UTC
From: SLee@houston-hunks.com
Message-ID: <O5F6SBI537762.5175@Gilgamesh-frog.org>
Source record: 30977
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.misc,alt.radio.scanner,alt.radio.pirate

HAZEL PARK - A Gay-Straight Alliance Club at Hazel Park High School has some parents trying to convince school officials that student club memberships should be possible only with parental permission.
The lobby by parents started a few months ago when the parents learned about the nearly two-year-old Gay-Straight Alliance Club, said Pam Baker, 43, whose son is a senior at the high school but not a member of the club.

"We're responsible for our kids until they are 18," said Baker. "(The schools) want us to control our kids. But when it comes to these issues, they don't want the parents to know about it."

Baker said issues like sexuality should be discussed among parents and their children.

"If a child can't talk to a parent, that's what counselors are for," Baker added. "I've talked to a few parents who are very concerned about it."

Baker said those parents have a lot of questions about the club, including who is running the meetings.

"When you are of high school age, you are vulnerable and have mixed and confused feelings," Baker said. "Should they be talking to homosexuals? Are there straight persons helping to run the meetings?"

Baker added, "I don't understand the importance of learning about your sexuality (at school). I don't think they should be using kids for meetings like that.

"It's great they are concerned about kids. But we also have kids graduating with a sixth-grade reading level. Where's the interest in academics?"

Baker also has a son in junior high school who she contends won't be attending Hazel Park High School if officials continue to allow children in clubs without parental permission.

Several parents have addressed the issue to the school board in recent past months. They were expected to speak to the board again on Monday night.

"This is nothing new," said school board President Clinton Adkins. "It's been going on for three months. The (Hazel Park High School) principal (James Meisinger) and the administration met with one parent.

"Personally, I don't believe the school or officials can dissolve that club," added Adkins. "The issue, in my opinion, is whether all clubs should require parental permission."

Adkins said school administrators have compromised with parents.

"They have promised parents they will send them information on every club in the high school," said Adkins, adding parents then would have the option to keep their children out of certain clubs.

Adkins said the high school doesn't have a problem about letting parents know about clubs.

"That club wasn't kept a secret," he said. "A female teacher is the mentor. The idea, we were told, is about awareness, that there are different types of people in the world and we should tolerate them. There is no talk about sexual orientation, only tolerance to people."

Adkins said he believes parents have a right to keep their children out of certain clubs.

Meisinger said there are more than 30 clubs in the high school outside of athletics.

"Each year we publicize the clubs and who their sponsors are," he said. "Seventy-five to 80 percent of the teachers volunteer their time and energy."

Meisinger said opposition to the Gay-Straight Alliance Club is comprised of only a few individuals who are, he added, very vocal.

Parents can talk with club mentors any time and even go to the meetings, Meisinger said. The school will honor parents' wishes to keep their children out of certain clubs.

He said there are five or six students in the Gay-Straight Alliance Club.

"It is one of the least active and smallest clubs," he said. "But it still exists. The purpose of the organization is acceptance of everyone including gays."

Most of the direction for the club comes from State Parents-Teachers-Students Association.

"There is no talk of sex or sexuality," Meisinger added. "The club meetings are open to everyone and anyone, including parents. We believe the activities are wholesome and in the best interests of the students."

Meisinger said teachers don't want permission slips for club membership because they feel that could create a "bureaucratic nightmare." Besides student club members, often non-member students drop in on the sessions, he said.

898. Houston-Hunks Columbus Tx Chapter--More Jurisdictions Add Gay Rights for the Workplace

More Jurisdictions Add Gay Rights for the Workplace

Wednesday, May 21, 2003

A growing number of cities and counties are prohibiting discrimination on the basis of sexual orientation, according to a new report from the Human Rights Campaign Foundation's WorkNet project.

The report found that 15 jurisdictions prohibited discrimination on the basis of sexual orientation in 2002, PlanetOut.com reports. Eight did so the previous year. In addition, 16 jurisdictions barred discrimination based on gender identity last year, according to the study. Five did so in 2001.

The study also found that the number of companies that offer domestic partner health insurance benefits grew by 16 percent in 2002, down from 24 percent in 2001, according to PlanetOut.com. The number of firms that have adopted nondiscrimination policies for sexual orientation grew by 7 percent last year.

"The fact that both indicators grew as much as they did is perhaps the clearest indication that these policies are good for business and that they have become a fact of American commerce," Daryl Herrschaft, associate director for HRC WorkNet, tells PlanetOut.com.

One state, New York, added coverage for sexual orientation in 2002. Thirteen states, 119 cities and 23 counties now prohibit sexual orientation discrimination, according to the HRC.

899. Houston-Hunks Columbus Tx Chapter--Prison Term In Assault On Gay Student

Prison Term In Assault On Gay Student

May 20, 2003

A 20-year-old man was sentenced today to 16 months in prison for attacking two members of a gay student group outside the Virginia Commonwealth University Student Commons.

Before he was sentenced, Andy P. Roberts apologized to Joye Abbott. At his trial in March, Roberts admitted hitting Abbott and breaking her nose but said he did so instinctively after being hit in the face with a glass bottle.

Richmond Circuit Judge Richard D. Taylor discounted Roberts' testimony. He termed his conduct reprehensible and credited testimony from witnesses that Roberts had said, "I'm not afraid to hit a dyke."

The altercation occurred after a confrontation between a gay VCU student and Roberts and two of his friends outside the Commons while a meeting of the Sexual Minority Student Association was underway.

The student went to the meeting and said he had been assaulted because he was gay. About 40 people spilled out of the Commons and confronted Roberts and at least six others.

Members of the association told Roberts' group to go home, and his group responded with homosexual epithets.

The confrontation escalated to shoves and the blow from Roberts to Abbott's face. He was sentenced to a year in prison for unlawful wounding in the attack on Abbott and to four months in jail for shoving another member of the association.

900. Houston-Hunks Columbus Tx Chapter--Judicial Nominees Endanger Gay Rights

Newsgroup: rec.radio.scanner
Date: 2003-05-21 10:27:11 UTC

Judicial Nominees Endanger Gay Rights
Monday, 19 May 2003
NEW YORK -- The New York Times editorial board on Monday drew a direct connection between the Bush administration's conservative nominees to the federal bench and the dangers these nominations pose to the advancement of gay and lesbian civil rights.

A growing threat to millions of gay Americans.

Said the Times: "The president called Senator Santorum, who had just equated homosexuality with polygamy and incest, 'an inclusive man.' At the same time, the Bush administration has been appointing federal judges who are hostile to equal rights for gay men and lesbians."

The newspaper singles out two federal judiciary nominees -- Bill Pryor, the Alabama attorney general, and Claude Allen, the number two official at the Department of Health and Human Services -- who deserve to be rejected at the conclusion of their confirmation hearings in the Senate.

Pryor who has been nominated by Bush to serve on the 11th Circuit Court of Appeals in Atlanta recently submitted a brief to the Supreme Court defending the Texas sodomy law. In it, he placed sexual relations between consenting gay adults and lesbians in the same category as necrophilia, bestiality and pedophilia.

Allen, the Times notes, distinguished himself as a rising conservative under Senator Jesse Helms of North Carolina. During a reelection campaign, Allen was quoted as saying that the Democratic opponent, James B. Hunt Jr., then governor, was vulnerable because of links to "the queers."

The editorial comment ends with the reminder that Allen and Pryor are just two of the hundreds nominated by conservative ideologues in the Bush administration eager to leave their stamp on the nation's courts.

901. Houston-Hunks Columbus Tx Chapter--Man believes anti-gay motive behind crime

Man believes anti-gay motive behind crime

Tuesday, May 20, 2003
By GREGG HERRINGTON, Columbian staff writer

A gay Vancouver man figures his sexual orientation is the reason for the sledgehammer vandalism to the trailer in Ridgefield where he operated a T-shirt silk screening business.

"The deputy said it was probably because I was gay and it's the only reason I can think of," Ed Gagnon, 44, said Monday.

"This was hatred. Whoever did it was violent and angry."

Someone broke into Gagnon's 22-foot camp trailer on private property at 1915 N.W. 189th St. the night of May 10. Furnishings and silk screening gear were smashed and tossed outside.

The vandal also smashed interior walls, apparently with a sledgehammer, said Gagnon, who resides in Vancouver but used to live in Ridgefield.

"Everything was pulverized," he said. "Things were unrecognizable. It had to have taken at least an hour to do that much damage."

The property owner, an 84-year-old woman who lives adjacent to the trailer, told Deputy Bryan Skordahl she didn't hear or see the incident.

According to Skordahl's report, another trailer nearby that is owned by someone else was not damaged. He said there were no suspects.

Gagnon said he was an active supporter of the amphitheater now being built on the Clark County Fairgrounds and couldn't rule out that involvement as a motive for the vandalism.

He estimated the damage at $2,500.

902. Houston-Hunks Columbus Tx Chapter--Church's gay rights advocate is made a bishop

Church's gay rights advocate is made a bishop
By Jonathan Petre, Religion Correspondent
(Filed: 21/05/2003)

One of the Church of England's most prominent advocates of gay rights, who has called for the ordination of practising homosexuals and blessings of gay marriages, has been appointed a bishop.

In a development which will dismay traditionalists, Canon Jeffrey John, the Chancellor and Canon Theologian of Southwark Cathedral, was yesterday named by Downing Street as the new Suffragan Bishop of Reading.

His elevation will give fresh impetus to the Church's gay rights movement and reflects the new mood since Dr Rowan Williams, who has admitted ordaining a practising homosexual, became Archbishop of Canterbury.

His predecessor, Dr George Carey, who warned that the Church was on the brink of a fundamental split over the issue, is unlikely to have welcomed the appointment.

Dr John, 50, who has declined to comment on his own sexuality, has been an outspoken campaigner for gay rights for decades, and last year contributed to a collection of prayers for homosexuals. It included prayers for same-sex marriages, sex changes and "fantasy and fetish".

Dr John, a former Dean of Magdalen College, Oxford, has said: "I don't think there is any alternative to the bishops demanding discretion to ordain whoever they think fit.

"Probably more than half of them have been ordaining and supporting positively gay clergy for years."

His appointment was made by the Bishop of Oxford, the Rt Rev Richard Harries, a liberal who heads the House of Bishops' working party on sexuality, after consultations with Dr Williams.

An Oxford diocese spokesman said Dr John continued to hold his controversial views privately, but would publicly abide by the House of Bishops' 1991 report Issues in Human Sexuality.

This document, which has been criticised by liberals including Dr Williams, argued that homosexual practice was unacceptable among clergy, though it might sometimes be condoned among the laity.

The Rev Rod Thomas, a spokesman for Reform, the conservative evangelical network, said: "This appointment will cause shock to many evangelicals.

"It will make them worry even more about the Archbishop of Canterbury's own position, and reinforce their desire only to accept biblical ministry in their churches rather than the liberal opinions of some bishops."

903. Houston-Hunks Columbus Tx Chapter--Gay Youth Fest Attracts 5000

Gay Youth Fest Attracts 5000
05.19.03

By Michael J. Meade

(Boston, Massachusetts) A record crowd attended Boston's Gay/Straight Youth Pride Festival on the weekend.
The festival, organized by the Governor's Commission on Gay and Lesbian Youth drew more than 5,000 people, double the attendance last year.

The young people marched from Copley Square to the Esplanade. As they passed under an arch of rainbow colored balloons near the Hatch Shell the crowd let out an immense roar or approval.

Brian Bolduc, one of the organizers stressed the importance of having a pride event geared for teenagers, many of whom are just beginning to understand their sexuality.

''Being in high school is such a difficult time anyway, but coming out in high school is even harder,'' Bolduc said. ''An event like this for them must be incredible.''

This year's festival also featured booths from colleges and universities.

''A few eyebrows were raised when I said I was coming to this event,'' said Jerry W. Pope, dean of admissions at Illinois Wesleyan University. ''One alum asked me, `Why?' We go to Latino and black college fairs, and since we don't discriminate, why not?''

An admissions representative from Dartmouth College said the perception of heterosexual men in starched shirts and pleated chinos no longer applies at the Ivy League school.

''The school has a lot of traditions but is open and accepting,'' said John Dolan, an assistant director of admissions.

''I think, from personal experience, gay students may appear less connected with the school community and many feel silenced,'' he said. ''It may be hard to find the right avenues in order for [colleges] to connect with them.''

Teenagers and college students were not the only ones on hand. A lesbian couple in their 40s, who have three children in their teens, drove from Maine to attend the fair.

904. Houston-Hunks Columbus Tx Chapter--Gay Military Group, Others Share $7.2 Million Gift

Newsgroup: rec.radio.scanner
Date: 2003-05-21 10:27:11 UTC

Gay Military Group, Others Share $7.2 Million Gift
July 22, 2002
Gfn.com News

The Servicemembers Legal Defense Network, a legal services organization for lesbian and gay military personnel harmed by the military's "don't ask, don't tell" policy, announced Friday receipt of a 10-year gift from the Clarence E. Anderson Living Trust & Charitable Foundation.

The gift, to be paid through annual installments over the next decade, was created by Anderson as part of his estate planning.

Anderson, who died in June 2001, was a resident of Los Angeles. Anderson's bequest, currently valued at $7.2 million, will be divided among eight nonprofit organizations, including the Washington-based SLDN. The first installment, awarded one year from the date of Anderson's death, was made on June 24.

"Mr. Anderson's gift is a poignant example of the change we can effect through charitable estate planning," said SLDN executive director C. Dixon Osburn. "His bequest is a reminder that a lifetime of dedication to positive change can also be a legacy for many years."

Anderson, who was an engineer by training, served four years in the U.S. Army, achieving the rank of sergeant. A longtime member of the American Legion, he spent his entire postmilitary career with IBM Corp. Throughout his life, Anderson used the wealth he amassed through IBM to create on-going gifts to support his college, his faith, and numerous organizations that strive to help others.

"Mr. Anderson's bequest continues his service as a veteran, a philanthropist, and a patriot," said Osburn. "His gift will make a real difference in the lives of men and women who continue to serve our country under federally sanctioned discrimination."

Other organizations receiving a portion of Anderson's estate include the Dunwoody Institute; Parents, Families, and Friends of Lesbians and Gays; Gay Men's Chorus of Los Angeles; Los Angeles Gay and Lesbian Center; Human Rights Campaign; National Gay and Lesbian Task Force Foundation; and Gay and Lesbian Adolescent Social Services of Los Angeles

905. Houston-Hunks Columbus Tx Chapter--National MP to cross floor over gay consent vote

National MP to cross floor over gay consent vote
May 21 2003

NSW National Party MP Russell Turner will break ranks with his party and vote to support an equal age of consent for gay men because his son is a homosexual.

While the Liberal and Labor parties have allowed a conscience vote on whether to lower the age of consent for gay men from 18 to 16, the Nationals had resolved to vote as a bloc against the move.

However, Mr Turner said he had been granted leave to cross the floor on the matter.

He told state parliament his son's sexuality had given him an increased understanding of the discrimination faced by young gay men.

"I have spoken to my son on many occasions and the National Party understands my situation where my son is a homosexual," he said.

"I would hope in supporting this bill today, and I will be voting for this bill, that slowly some of the ignorance and some of the fear that we have in our community will dissipate.

"(And I hope) we will accept these people as a section of the community that deserves to be treated equally and we will get rid of most of the discrimination that they are suffering at the moment."

Turner was courageous in supporting the government's equal age of consent for gay men, his party leader Andrew Stoner said today.

National MPs agreed to vote as a bloc against the move two weeks ago, but Mr Turner was given permission to cross the floor, Mr Stoner said.

"Russell's shown a lot of courage," he said.

"He's also shown a lot of love for his two sons and daughter and that's what it's all about - a man who loves his children no matter what."

Mr Stoner rejected suggestions Mr Turner was referring to his fellow National MPs in his parliamentary speech in which he referred to community's ignorance and fear.

"Russell's referring to a general lack of awareness of issues that he and other parents of gay children face and I think he's talking about that ignorance in the community generally," Mr Stoner said.

"I don't think he's talking about his colleagues.

"I think we've demonstrated a great deal of sensitivity to those issues in giving Russell the go-ahead to effectively cross the floor against the party.

"There is another side of the argument and it's about the protection of immature young men from the predatory sexual advances of older men.

"It just so happens that's the prevailing argument for me and the majority of my colleagues.

"But in Russell's case, because it's much closer to home, that side of the argument is much stronger for him."

The PA-SitRep emergency e-mail list is a free
tool that will enable you to monitor major
emergency situations throughout the State
of Pennsylvania including major weather
emergencies, natural disasters, environmental
disasters, civil disturbances and threats of
terrorism, major fires and manhunts.

Messages posted to the list may be recieved
with just about any digital cell phone which
allows PA-SitRep subscribers to keep up to
date with MAJOR emergency situation reports
posted to the list while mobile or away from
other news sources such as TV or radio.

Message volume on PA-SitRep is EXTREMELY
low and users may subscribe and unsubscribe
at any time (PA-SitRep is NOT an incident
reporting list - ONLY MAJOR Emergency
Situations in or relating to PA are posted).

PA Scanner enthusiasts are a perfect fit for
our PA-SitRep Contact program. Please

Stunning gay Jewish movie
Keith McDonnell
Gay.com UK
19 May, 2003

Trembling Before G-d is an unprecedented feature documentary that tackles the dilemmas facing homosexual orthodox Jews. This multi award-winning film will be released in the UK at the end of May. It is a sensitive tribute to the determination of observant Jews struggling to reconcile their commitment and love of Orthodox Judaism with their homosexuality and the universal search for intimacy and love.

Filmmaker Sandi Simcha DuBowski was inspired to shoot the documentary after meeting the gay son of an ultra-Orthodox rabbi. It took Sandi over five years to shoot as it proved difficult to break the public silence over homosexuality in the Jewish community.

His interviewees come from such diverse environments as New York, Jerusalem, Los Angeles, London, Miami and San Francisco. Many of them were afraid to talk directly to the camera and others gave permission for interviews only if their identities would be kept secret. The result is an intimate and compelling piece of cinema.

☐I saw Trembling before G-d last night at the Film Forum in NYC. I can not stop thinking about it. You did an amazing job with this film. I expected to see a movie bashing Orthodox Jews and putting down their perspectives on Homosexuality. Instead I saw people that love learning Torah, love praying to G-d , love Jewish tradition and want to be accepted for who they are."

☐Stunning.. Fascinating How it got overlooked at Oscar Time is a mystery☐
**** Empire Magazine June 2003

☐As an Orthodox rabbi who wants to help everyone bring halacha [Jewish law] into their lives, I learned from this film humility and sensitivity, which themselves are crucial to making any halachic decision."

The film won ten awards including the Teddy Award for Best Documentary at the Berlin Film Festival, The Mayor☐s prize for the Jewish Experience at the Jerusalem Film Festival, and the Grand Jury Prize for Best Documentary at OUTFEST Los Angeles.

Trembling Before G-d opens in London at The Screen On The Hill and the Other Cinema on 30 May 2003, and at selected cinemas nationwide from this date.

There are also several special events with director Sandi Dubowski and the first openly gay Orthodox Rabbi, Steven Greenberg as follows:

London: Screen on the Hill, June 1 (020 7435 3366)
London: The Other Cinema, June 4 and 8 (020 7734 1506)
Cambridge: Arts Cinema, June 2 (01223 50 44 44)
Liverpool: FACT, June 4 (0151 707 4450)
Brighton: Duke of York's, June 2 (01273 602 503)
Leeds: Hyde Park, June 9 (0113 275 2045)
Manchester: Cornerhouse, June 3 (0161 200 1500)
Edinburgh: Cameo, June 10 (0131 228 4141)
Glasgow: GFT, June 10 (0141 332 8128)

909. Houston-Hunks Columbus Tx Chapter--Judge Asked To Dismiss Gay/Straight Lawsuit

Newsgroup: rec.radio.scanner
Date: 2003-05-21 11:34:30 UTC
From: SLee@houston-hunks.com

Judge Asked To Dismiss Gay/Straight Lawsuit

Boyd County school officials deny they violated federal law by banning a gay-rights student group from meeting at Boyd County High School.

They want a federal judge to dismiss a lawsuit against them. The lawsuit challenge is by the school board, Superintendent Bill Capehart and Boyd County High School Principal Jerry Johnson.

U.S. District Judge David Bunning said last month the suit has a strong likelihood of winning.

The lawsuit was brought by the American Civil Liberties Union on behalf of the Gay-Straight Alliance, seven students and their parents, and Kaye King, a high school English teacher who is the alliance's adviser. The response was filed May eighth.

After the school's teacher-parent council voted to let the group meet on campus, the school board banned all non-curricular student clubs from using school facilities.

But the ACLU sued in January, saying some student groups were allowed to meet at school while the alliance was not allowed to meet.

910. how I stopped newsgroup SPAM

Newsgroup: rec.radio.scanner
Date: 2003-05-21 14:21:43 UTC
From: Vic <nospam@bogusaddress.com>
Message-ID: <QVLya.34882$HP4.1915@fe08.atl2.webusenet.com>

Saw a post earlier which said there had been a LOT of spam within the past week. Those were my thoughts too. So for the first time
in 15 years of using PC's decided spam filtering was necessary for NG's too (I've used it for eMail for a while).

Well after a half hour of cleaning up the junk in the files here (I use Outlook Express) and adding key words to the spam filter
(like: shit, crap, fuck, politic, god etc etc etc) AND adding the names of people who tend to go OFF TOPIC I've got to say, the
posts I see look pretty good. No more 'Houston-Hunks' faggot stuff and peoples political views which *DO NOT BELONG HERE*

I know a LOT of people have been upset by people acting like jerks sending inappropriate material so I'm sending this as
ENCOURAGEMENT so people who want to stay on topic DON'T leave.

Take the time to figure out your software filter options (it's not hard) and ADD the keywords used in SUBJECT LINEs you wish to
block. I would also recommend blocking posts from people who typically to not adhere to the rules of these forums. Here's an example
of how I set up filters with Outlook Express:

to add SUBJECT LINE keywords ...
from the main pulldown menu select: Tools, Message Rules, News
click NEW

section 1.
click Where the Subject line contains specific words

section 2.
click (whatever you want) I clicked 'DELETE IT'

section 3.
click the HIGHLIGHTED link which says 'contains specific words'
type in the word you wish (such as 'political')
click ADD
type in the next word, click ADD etc. etc. etc. until you have the words you wish
click OK all the way out

To block specific peoples posts (e.g. Stagger Lee) do the following ...
from the main pulldown menu select: Tools, Message Rules, News
click NEW

section 1.
click Where the From line contains people

section 2.
click (whatever you want) I used DELETE IT

section 3.
click the HIGHLIGHTED link which says 'contains people'
type in the name you wish to block (such as 'stagger lee')
click ADD
type in the next name (or portion of a name), click ADD etc. etc. etc. until you have the words you wish
click OK all the way out

Final notes: of course you must modify the words and users to block on occasion but it's worth the effort! You will find browsing
much more enjoyable!

<tourettes induced profanity laced rant removed>
> So spew your crap me spew spew spew WinCrap is still shit junk that does
> not work end of story. "The WinScan780 Horror story" (a NOSPAM original
work of fiction)

NO, it's not the end of the story - it's not even the end of the SENTENCE!
The sentence should read: It does not work for YOU. Aha...

Not everyone here believes that all software packages sold for the 780 work
on all PC configurations 100% of the time flawlessly. No one else is so
naive - no one but you.

Just what are you trying to accomplish here anyway? You failed to say
anything that even hints that I have been wrong about you in any way.

Not one word you wrote disproves my assertion that you have a personal
vendetta against one company, thereby biasing your views and making any
"tests" or "reviews" you write totally worthless.

Not one word denies that you have been caught trolling for serial numbers in
a.b.r.s.

Not one word disproves my claim that you are more involved in writing usenet
fiction than federal laws.

Not one word refutes the fact that you're a fjuckwit.

You keep aluding to working in the Federal Government (like that is supposed
to impress anyone) but refuse to post what job you do. You could be a
janitor at the local post office and be able to truthfully claim you work
"in federal government". Means nothing.

You claim to be a "retired gunship driver" again with no verifiable proof.
This is about as impressive to the rest of the group as claiming to be
Batman, or Wonder Woman would be. Meaningless and unverified.

Finally, when called into question on the validity of your supposed tests by
someone totally uninvolved in this little fued of ours, you spout off at the
mouth with all the tact and grace of a 5 year old who's favorite toy was
taken away. Pathetic.

I'm not the only one who sees thru it NOSPAM. Every time you post your
juvenile rants more and more people wake up to the real YOU and realize what
a complete and total uneducated moron you really are. Once they make the

distinction it doesn't matter what you say. No one cares.

I guess what I'm trying to say here is "Thank you". Your own words have discredited you far more than I or anyone else could have hoped for.

My only hope is that someday you'll realize this and leave. Could that day be... today?

-me

915. how I stopped newsgroup SPAM: UPDATE

Newsgroup: rec.radio.scanner
Date: 2003-05-21 20:32:15 UTC
From: Vic <nospam@bogusaddress.com>
Message-ID: <flRya.41518$HP4.27747@fe08.atl2.webusenet.com>
Source record: 30994
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

My previous post explaining how to use OE filters to block unwanted posts & posters seemed well received so I decided to explain how
to get rid of all the 'garbage' you don't want in your existing files!

It's a little complicated but I'll run through step by step. If you print this out it will be easy to follow the rather lengthy
instructions. I'm sure it will be worth your effort!

to START:
open Outlook Express
press Ctrl+Y
select the folder or main GROUP FOLDER you want to clean
(here is a 'group' folder example: on my PC there are a number of GROUP folders, one is called LOCAL FOLDERS, another is called
NEWSGROUPS. If NEWSGROUPS is expanded I see MANY 'rec.radio.whatever' newsgroups. I want to clean EVERYTHING under my main group
called NEWSGROUPS ... select the folder or main folder 'GROUP' you want by highlighting and clicking OK, or highlight the folder and
press enter)
the folder you selected is now loaded in OE
press Ctrl+Shift+F (a Find Message dialog box should appear)

we want to remove all the 'Stagger Lee' garbage so type 'stagger lee' in the FROM box
click 'FIND NOW'
press Ctrl+A
all messages found should be highlighted
place the mouse cursor over highlighted messages, right click
click MOVE TO FOLDER
a MOVE dialog box appears
highlight the folder to move the junk to, I use DELETED ITEMS
click OK
now to PERMANENTLY delete them!
in the FIND MESSAGE dialog click BROWSE
select the folder you 'moved' the junk to
I selected DELETED ITEMS
click FIND NOW (OE will now look for whatever item you just moved)
press Ctrl+A (everything found should be highlighted)
now for the good part ... press DELETE on your keyboard
a dialog pops up asking (bla, bla, bla, Do you want to PERMANENTLY DELETE)
click YES

THAT'S it! (Whew)

I searched for all the garbage stuff using keywords in the SUBJECT box and I also deleted posts from certain users by using their

name as a keyword in the FROM box. What a pleasure it is to look at the posts the way they should be!

Hope you enjoy it

Vic

PS: I found it is necessary to be careful with the words one selects as keywords. For example, I wanted to delete all messages with
g-d (god) but some posts have a subject line which contains the words 'analoG-Digital' (funny). Naturally I don't want those
deleted. There were others too. I've also found 'shortcuts' for keywords. For example, 'politic' gets rid of subject lines with
POLITICAL, POLITICS, POLITICALLY etc.

Try the FLT201A found at http://www.stridsberg.com/prod02.htm its an FM notch filter. It help my Uniden BC 785D a lot. You can order directly from Stridsberg over the phone, nice people to deal with.

Discones are the worlds most overated antennas. I had a Diamond, very over priced for the performance. In fact I gave it do the garbage man after having my first ScanTenna. The Diamond was the worse $100.00 I've spent....

Thanks Vic..

This is one of the most useful posts I've seen here in some time.

I am going to do this, and every other serious radio newsgroup user should as well, since apparently no one else cares to stop this ridiculous abuse of the Usenet Newsgroups.

And to think that I was blasted by my ISP for posting some FA items!

Dan

Vic

I followed your advice and it worked a treat.

I found it a bit easier to delete the postings already made though (OE6). In the message rules there is an 'apply now' button - you need to select the newsgroup you wish to apply the rule to first.

I've walked around several cruise ships with radios, listening to them over earphones, taking readings with GPS, and have never gotten a second look from anyone. Though, I usually don't carry around a full size scanner. I leave it in the room, and carry around a Yaesu VX-5, whici most cruise people would probably take for an FRS radio.

Thats what I have also been telling folks George but they just don't want to hear it, i.e. they see all them purity things sticking out of it and geeezz it must work. "NOT" More just sticking out of an antenna does not mean it works better. The only we use the Discone for today is 2 meter transmit and receive on our 2 meter rig, thats it.. And because our repeter is only 11 miles away it does do that OK.

SAN FRANCISCO, May 20, 2003 ☐ The Lesbian ,Gay, Bisexual, Transgender (LGBT) Family Expo is set to open Pride Month festivities in the city of San Francisco by providing valuable information to protect LGBT families, their assets, and to help them plan for their golden years. The Expo will be held on Saturday, June 7, from 10 a.m. to 3 p.m., at the San Francisco LGBT Center.

☐Our community is rich in resources that need to be made available to those who need the information the most,☐ said Rachel Robasciotti, a financial planner who conceived the event and is also a board member for the National Center for Lesbian Rights. ☐Placing them under one roof provides our community a rare opportunity to learn all aspects of family planning at once.☐

The Expo is planned to meet all the needs of LGBT families, or LGBT people seeking to start a family. Presenters will cover issues ranging from legal affairs, to financial planning, to adoption and insemination, to retirement. A special panel will be dedicated exclusively to the needs of children in the community.

☐Our families have special needs that involve a wide array of specialists that makes the entire process of raising a family challenging,☐ said Molly McKay, Esq., MECA Executive Director, Northern California. ☐Indeed this expo will prove invaluable to our local community.☐

The Expo will be help at the San Francisco LGBT Center on Saturday, June 7, from 10 a.m. until 3 p.m. The LGBT Center is located at 1800 Market Street at Octavia. For more information please call Rachel Robasciotti at 51-410-8530 or Traci Hollander at 415-575-3775.

PUYALLUP: Gay Straight Alliance gains club status at high school
Jim Szymanski; The News Tribune

Puyallup High School's Gay Straight Alliance has gained full-fledged club status.

The club petitioned for the designation after school officials turned down an attempt to publicize the group's activities with posters. Lawyers for the school district and American Civil Liberties Union advised the school that a federal court of appeals ruling guarantees the group club status.

Group members learned of the decision when it was announced at a student council meeting on Tuesday. The club designation will allow the Gay Straight Alliance to hold assemblies, publicize activities and apply for student association funds.

927. Columbus Tx Houston-Hunks presents--Gay business network now open in Rehoboth Beach

Newsgroup: rec.radio.scanner
Date: 2003-05-21 22:20:06 UTC
From: SLee@houston-hunks.com
Message-ID: <C2PUP7UX37763.0133101852@Gilgamesh-frog.org>
Source record: 30857

Gay business network now open in Rehoboth Beach
Gay Business Association Of Rehoboth (GBAR) is now open for business. The new association, consisting at present of a core group of about 20 interested independent business owners, began meeting weekly on Thursday evenings at the Rehoboth Race-In Deli March 13. Instrumental in forming this new alliance of business owners were local businessmen Chris Miles from the Shore Inn Bed & Breakfast and Ray Whitehair from Rehoboth Race-In Deli. Subsequent GBAR meetings have been held weekly at Rehoboth Race-In Deli with an average of 25 businesses attending each meeting

In an effort to launch the new organization☐s objectives effectively and efficiently, GBAR members from ☐EXP Gayzette☐ and www.gayrehoboth.com have offered to assist the group in cutting its startup costs. ☐EXP Gayzette☐ copublisher Jeffrey Balk offered to donate space in a May edition of the magazine to accommodate the association☐s members☐ phone directory.

☐It is my pleasure to help this fledgling organization publish their first phone directory,☐ said Balk. ☐I think, by offering to publish the phone directory, and thus cover production costs for GBAR, it will help the organization build its member list and get on its feet. ☐The Gayzette☐ will offer 15,000 copies of the directory through ☐EXP Gayzette☐s☐ distribution circuit in eight cities in four states. It will also allow the group time to build its member list and also the time to produce a more complete stand-alone phone book next year.☐

In the same manner, gayrehoboth.com website owner and ☐EXP Gayzette☐ copublisher, Carol Fezuk offered to host GBAR☐s website off the popular local gay vacation and information website. ☐Our site☐s popularity, especially since its relaunch on April 10, thanks to local webmaster Michael Graham, will be an asset to the group in establishing its web presence with a clickable link from gayrehoboth.-com,☐ said Fezuk.

☐While GBAR☐s new web address, www.gayrehoboth.com/GBAR will invite potential visitors to our beautiful beaches for fabulous food and exciting nightlife geared for the alternative community, it will also promote the association☐s members and their services.

☐Both the print and online versions of the association☐s materials will include a comprehensive description of GBAR☐s members as well as a detailed map featuring members and their street locations.☐

☐This association would certainly not be possible without the members who have been at every meeting helping to build this association,☐ said Gay

Business Association Of Rehoboth acting Cochairman Chris Miles. ☐I am thankful and impressed with how this idea has taken off and grown so in such a short time. Not to mention, this association has also allowed us, as local business people to meet, become better friends and networking associates.☐

The Gay Business Association of Rehoboth☐s mission statement is to promote and support gay business in the area.

Future plans for the group include the production of a gay business directory, sponsoring a gay job fair, developing the plans for a gay film festival and supporting gay pride events.

For information about GBAR or to join, contact Miles at 227-8487, Ray Whitehair at 227-0700 or email: gbarehoboth@yahoo.com.

For more information on ☐EXP Gayzette,☐ call 227-5787, 877-397-6244 or email EXPgayzette@aol.com.

928. Columbus Tx Houston-Hunks presents--Citing gay ban, students drop blood drive

Citing gay ban, students drop blood drive
Gay.com / PlanetOut.com Network
Monday, May 19, 2003 / 04:56 PM

Students at Southern Oregon University canceled a spring blood drive in protest over federal guidelines that ban gay men from giving blood.

Students at SOU say the policies violate the university's nondiscrimination policy and stigmatizes gay men.

Since 1985, the U.S. Food & Drug Administration (FDA) has banned all blood donations from any man who has had sex with a man since 1977, even once. Also, women may not give blood if they had sex over the last 12 months with a man who had gay sex in the last 26 years.

As reported by the Associated Press, student government official Amanda Guidero canceled the drive due to complaints.

"I do believe those students had a legitimate concern," she told the A.P.

"I know I've been yelling about it for four years," said Daniel Conner, a senior. "I'm a gay man and I don't like being forced to lie to help people."

In 2000, an FDA advisory committee voted 7-6 to keep the current policies about gay men in effect. Some officials had suggested that men be allowed to donate if they hadn't had sex with a man for five years or one year.

929. Columbus Tx Houston-Hunks presents--My gay son: Nats MP bucks the party line

My gay son: Nats MP bucks the party line
By Paola Totaro, State Political Editor
May 22 2003

A National Party MP, Russell Turner, spoke in Parliament yesterday about his adult son's homosexuality, in a bid to explain his decision to defy his party and support changes to age of consent laws.

In a spirited and sometimes emotional day, the floor of the NSW lower house became an arena for a rare kind of political debate - one unfettered by pre-ordained party positions, and speakers guided principally by their consciences.

The reforms, which were designed to bring NSW into line with all other Australian states, will provide a uniform age of consent for men and women, fixing a legal anomaly that had led to a higher age of consent for homosexual men. The changes are coupled with tough new penalties for child sexual assault by adults in positions of trust.

Last night, the House voted 54 to 32 to support the changes. At least eight coalition MPs backed the bill, including Opposition Leader John Brogden. At least six Labor MPs voted against, including Gaming and Racing Minister Grant McBride, former corrective services minister Richard Amery and Fairfield MP Joe Tripodi.

The bill now moves to the upper house where the Labor Government does not have a majority.
More than 20 MPs chose to speak on the reforms, but it was Mr Turner, the MP for Orange, who seized his colleagues' attention and quiet admiration.

The National Party Leader, Andrew Stoner, a vehement opponent of the changes, had said his MPs would vote as a bloc, but Mr Turner was allowed to speak freely on the reform and he told Parliament he wanted to give some detail about how personal experience had shaped his understanding.

Last night his son, Scott, 38, told the Central Western Daily that he was proud of his father and his decision to set aside party politics to vote with his conscience. "I am proud of him as a man, a father and a politician.

"Dad is very much aware of how difficult it is for a young gay person growing up in a rural area with most young men not comfortable to acknowledge their sexuality until they are well into their 20s. Until then the intervening years can be very traumatic. This issue is not about

sexuality; it's about equality."

Mr Turner told Parliament that it was the understanding and support of family that had allowed his son to return from Sydney, where he had trained as a teacher, and settle in Orange again, accepted by friends, family and the community.

Mr Turner said many young men he had spoken to in recent years had explained that they were forced to leave their families and live in Sydney because their small towns did not offer the support or acceptance they so desperately sought.

"My son has a partner, a business and a home in Orange. He is accepted by friends of my wife and I, and he is accepted by the vast majority of people in Orange who have a reasonable understanding of the issue," he said.

Visibly shaken during his speech, Mr Turner said that society may have come a long way, but it still needed to work through the issue of homosexuality and learn to stop discriminating and "treat homosexuals as normal human beings".

"People can live what appear to be normal lives, but a scratch of the surface reveals that they have not been able to acknowledge their true sexuality . . . importantly, [homosexuals] are the sons and daughters of parents who agonise about how to handle the situation."

His hope, he said, was that the legislation would help in this process.

930. Columbus Tx Houston-Hunks presents--School officials ask for dismissal of gay group suit

School officials ask for dismissal of gay group suit

The Associated Press

ASHLAND, Ky. - Boyd County school officials deny they violated federal law by banning a gay-rights student group from meeting at Boyd County High School and want a federal judge to dismiss a lawsuit against them.

The response of the school board, Superintendent Bill Capehart and Boyd County High School Principal Jerry Johnson challenges the lawsuit, which U.S. District Judge David L. Bunning ruled last month has "a strong likelihood" of winning.

"The case hasn't been tried on the merits yet," said Sheri Bryan, chairwoman of the Boyd County school board.

The lawsuit was brought by the American Civil Liberties Union on behalf of the Gay-Straight Alliance, seven students and their parents, and Kaye King, a high school English teacher who is the alliance's adviser. The response was filed May 8.

After the school's teacher-parent council voted 3-2 in October to let the group meet on campus, the school board in December banned all student clubs not connected to curriculum from using school facilities. But the ACLU sued in January, saying some student groups were allowed to meet at school while the alliance was not allowed to meet.

The ACLU said the district violated the alliance members' free-speech rights, failed to end anti-gay harassment and violated the Kentucky Education Reform Act by overturning a school council decision.

Bunning agreed. He issued an injunction requiring the district to let the Gay-Straight Alliance meet at school, pending resolution of the lawsuit.

Bryan said the school board did not want to appeal the injunction because school is nearly over for the year.

King said Monday that the alliance has been meeting weekly at the school with 10 to 12 members at each meeting.

"We're not having any trouble with the students here at school," King said.

In its response to the lawsuit, the district denied discriminating against the Gay-Straight Alliance, failing to address anti-gay harassment and violating the reform act. The response also said that the alliance failed to pursue all administrative channels in regard to the club ban and that the district had the right to ban clubs "to maintain order and discipline in the school district as permitted under both state and federal law."

School board members said in December that they banned clubs through June 30 to give the board time to rewrite the district's club policy. Bryan said that the process is ongoing, but that the board likely will revise the club policy next month, and that it will go into effect July 1.

"It will be equitable across the board for all clubs," she said.

GAY TEEN BOOK AUTHOR TO BEGIN WEST COAST TOUR

Brent Hartinger, author of Geography Club, the acclaimed new gay teen novel from HarperCollins, will embark on a West Coast author's tour this summer, visiting bookstores and gay pride festivals in Palm Springs; Los Angeles; San Francisco; Sacramento; Portland, Oregon; Seattle; and Spokane, Washington. Hartinger will read selections from and sign copies of his book, but will also recount the book's fascinating, if convoluted, journey to publication.

"The book was rejected by seventeen publishers before finally ending up at HarperCollins," Hartinger said. "At the time, everyone claimed there was no market for a gay teen novel. Of course, now that the book has gotten all these great reviews and is selling so strongly, all these editors are coming to my agent saying they're upset that she didn't send the manuscript to them!"

Geography Club is the story of 16 year-old Russel Middlebrook, who starts a secret gay-straight alliance at his high school in order to spend time with the object of his affection, a closeted baseball jock. Because they're afraid of being exposed as gay, they disguise the true nature of their club--and try to discourage anyone else from joining--by giving it the most boring name they can think of: the Geography Club.

Horn Book Magazine called Geography Club "pitch-perfect," and said, "This is the most artful and authentic depiction of a gay teen since M. E. Kerr's groundbreaking Charlie Gilhooly in I'll Love You When You're More Like Me." The Dallas Voice said, "Geography Club deserves every bit of praise it's been receiving....Readers of all ages and persuasions will enjoy the travails of a wholly engaging protagonist whose 'geography lessons' teach him the precarious landscape of gay love and life at the start of the 21st century."

Hartinger is currently adapting the book into a play with two versions, one for commercial theatre, and a shorter touring version for high schools.

"My film agent is the woman who turned the book Holes into a play and movie," Hartinger said. "Now she wants to do the same thing with Geography Club, and I couldn't be more pleased."

932. Columbus Tx Houston-Hunks presents--Anti-gay pastor to protest Lincoln graduation

Anti-gay pastor to protest Lincoln graduation
His church is upset a D.M. student received a scholarship named for Matthew Shepard.
By TARA DEERING
Register Staff Writer
05/21/2003

A Lincoln High School senior's graduation ceremony will be protested next week because he was awarded a college scholarship in honor of Matthew Shepard, the gay Wyoming college student who was tortured and killed in 1998.

Julius Carter is Lincoln's senior class president. He plays football and sings in show choir. He also is gay.

Anti-gay pastor Fred Phelps and members of his Topeka, Kan., Westboro Baptist Church announced plans to protest Lincoln High School's graduation May 31 at Veterans Memorial Auditorium.

Lincoln High officials received a press release Saturday from the church group condemning them and the school district for recognizing Carter. Principal Al Graziano said he was dismayed when he read the press release Monday.

Carter said he was offended that the group was attacking his school.

"I could care less what they say about me because I go through that all the time," he said.

Carter applied for the Matthew Shepard scholarship to help pay for his pre-medicine education at the University of Iowa. He said the scholarship covers tuition, books and fees for four years.

Carter said he came out about his sexuality about two years ago to his close friends. After hearing of the protest, he said his friends have expressed concern for his safety.

"My friends are very protective of me, even more so now," Carter said Tuesday. "By this happening, (Phelps) is going to see that no one in Iowa cares because the way he presents himself is wrong."

Carter said he doesn't want anything to ruin his peers' special day.

"The last thing I want to do is be someone who hinders their happiness," he said.

Graziano also said he doesn't want the protesters to take away from his students' graduation day.

"It's their graduation day, and we want to keep the focus on the graduates," he said. "We plan to still have the best ceremony we can have."

Des Moines police officials said they are aware of the planned protest and don't foresee any problems.

Graziano said Carter is a visible member of the student body who is well regarded. He said many of the students who know of the planned protest have expressed concern for Carter.

Shirley Phelps-Roper, 45, the church's attorney and a member, said between 10 and 15 protesters are expected to protest at Veterans Memorial Auditorium.

"There are some people left in this world who haven't given over whole hog that it's all right to be gay," she said. "The issue is to publish this message. And what better way to catch these children is when they're heading into their graduation."

Phelps-Roper said she received several calls Tuesday from students and friends of Carter condemning the planned protest.

LGBT LOBBY DAY IN SACRAMENTO A SUCCESS

Lieutenant Governor Cruz Bustamante Joins Coalition in Support of Key Bills

SACRAMENTO ☐ Monday, May 19th, California☐s statewide lesbian, gay, bisexual, and transgender (LGBT) advocacy organization, previously known as the California Alliance for Pride and Equality (CAPE), formally announced its new name: Equality California. The announcement was made at the legislative reception following an extremely successful day of meetings with legislators and statewide elected officials as members of Equality California☐s Board of Directors and other allied organizations lobbied for the passage of key LGBT-rights legislation sponsored by Equality California.

☐We selected the name ☐Equality California☐ to reflect our mission and the work that we do: ensuring equality for the LGBT community and all Californians,☐ said Geoffrey Kors, executive director of Equality California. ☐The name seems especially appropriate in light of the incredibly broad coalition of supporters we were able to bring together for this extremely successful lobby day.☐

Leaders from dozens of local, statewide, and national groups participated, including Parents, Family and Friends of Lesbians and Gays (PFLAG), LLEGÓ-the National Latino/a LGBT Organization, Children of Lesbians and Gays Everywhere, ACLU, the Human Rights Campaign, California Church IMPACT, Love Sees No Borders, Marriage Equality California, Lambda Legal, National Organization for Women, Out & Equal Workplace Advocates, National Center for Lesbian Rights, Metropolitan Community Church, Amnesty International, Stonewall Democrats, Log Cabin Republicans, San Francisco AIDS Foundation, California Safe Schools Coalition, Gay and Lesbian Law Enforcement Professionals, and Our Family Coalition.

One of the highlights of the day was a 30-minute meeting with Lieutenant Governor Cruz Bustamante. He voiced his strong support for all three of Equality California's key pieces of legislation: AB 17 (Kehoe) - equal benefits for state contractors; AB 196 (Leno) - gender nondiscrimination; and AB 205 (Goldberg), the Domestic Partner Rights & Responsibilities Act of 2003. Bustamante shared stories of his own personal and political history, and offered insights about how to work with legislators to increase support for legislation important to the LGBT community.

"We applaud the Lieutenant Governor's continued willingness to speak out on behalf of equality for lesbian, gay, bisexual, and transgender

Californians," said Kors. "Cruz Bustamante continues to be a strong advocate for our community, and we are grateful for his leadership."

Board of Equalization Member John Chiang also met with the group, and similarly voiced support for all of the Equality California-sponsored legislation. The group also met with Insurance Commissioner John Garamendi, and representatives from Secretary of State Kevin Shelley, Attorney General Bill Lockyer, and Board of Equalization Chairwoman Carole Migden.

Following the day of meetings, Equality California hosted a legislative reception at which the Speaker of the Assembly, Herb Wesson (D-Los Angeles), presented Equality California□s 2003 Legislative Equality Award to the five members of the Legislative LGBT Caucus: Senator Sheila Kuehl (D-Santa Monica); Assemblymember Jackie Goldberg (D-Los Angeles), Christine Kehoe (D-San Diego), Assemblymember John Laird (D-Santa Cruz) and Assemblymember Mark Leno (D-San Francisco). In his remarks, Wesson commented that he looks forward to a California where, □We don□t care who you love, we don□t care how you love □ we just care that you love.□

Following the award, Marina Gatto, a fourteen-year old high school sophomore from San Carlos who has appeared on national television numerous times as a spokesperson for children from LGBT families, spoke about the hardships her family has endured simply because she has two mothers. She encouraged everyone present to support AB 205, which would grant important legal protections to children in families like hers.

□We are grateful to Marina for joining us yesterday,□ said Kors. □We are also grateful for the presence of the many other individuals who have been impacted by the lack of legal recognition for same-sex couples and their families. Hearing their personal stories illustrates for legislators and everyone else why this legislation is needed.□

934. Columbus Tx Houston-Hunks presents--NYC's 20TH ANNUAL LEATHER GAY PRIDE NIGHT AUCTION

NYC's 20TH ANNUAL LEATHER PRIDE NIGHT AUCTION

Saturday, June 14th, 2003

NEW YORK, NY March 17--The 20th annual Leather Pride Night Auction will take place on Saturday, June 14th, 2003. Doors open at 7:30 PM. Auction and festivities continue until 12:00 Midnight at The Puck Building, 295 Lafayette Street (at Houston Street, one block east of Broadway). This space is wheelchair accessible.

Jo Arnone, LPN's veteran auctioneer, will preside over hundreds of items being auctioned, including leather and latex fetish clothing, unique toys and equipment, art and Broadway theater tickets, and much more. Leather Pride Night is sponsored by twelve NYC s/m-leather- fetish organizations: DefendersNY, Gay Male S/M Activists, Imperial Court of NY, Iron Guard BC, Lesbian Sex Mafia, MetrobearsNY, NY Panthers LC, NY Renegades, Pariah's MC, Promethean Guard, Society Nocturnus of Gotham, and The Eulenspiegel Society and many committed individuals.

In 2002, Leather Pride Night donated $15,100 to five local and national charities. This year, Leather Pride Night will donate the 2003 Auction proceeds to: the Heritage of Pride (HOP), the NYC AIDS Monument Committee, the Pride Center of New Jersey, the Foundation for Research on Sexually Transmitted Disease (FROST'D), Teens Prepared for Life (TPL) and the New York City Gay and Lesbian Anti- Violence Project (AVP).

Tickets for Leather Pride Night are $15 in advance, and $20 at the door. Paypal payment is available at the LPN website www.leatherpridenight.org. Tickets can also be obtained at any of the sponsoring organizations, as well as the following supporting commercial venues: David Samuel Menkes Custom Leatherwear, Purple Passion / DV8, London, Paddles, The Leather Man, The Noose, Submit, El Mirage, Le Chateau Exotique and Toys in Babeland.

Leather Pride Night is part of a month of fabulous leather and fetish oriented events in New York City. On June 14, after the Leather Pride Night festivities, TES will hold its Annual Leather Pride Night Party at Paddles, 250 W 26 St 12am - 5am. Discounted entry to LPN ticket stub holders and members of other SM/Leather organization. This is their biggest play party of the year. Also that night, The Lesbian Sex Mafia (LSM) is hosting an all woman BDSM Play Party, following LPN, Midnight to 4 AM.

On Sunday June 15, 2003, The Lesbian Sex Mafia is hosting a Leather Community Event from 2 PM until 11 PM, which will include a meet and greet, play areas and demos. For more information and location:

www.Lesbiansexmafia.org or call 212-726-3844. On Sunday, June 22nd, GMSMA presents the FOLSOM STREET EAST VII, an s/m-leather-fetish block party on West 13th Street. Over 10, 000 leather men and women cap off Leather Pride Weekend with the largest outdoor festival of its kind on the East Coast.

The Leather Pride Night Committee is dedicated to promoting freedom of sexual
self-expression, and actively works to improve the image and understanding of
S/m and fetish lifestyles.

The Leather Pride Night Committee meets on the first Thursday of the month at 8:00PM at the LGBT Center, 208 West 13th Street.

935. Columbus Tx Houston-Hunks presents--27TH SAN FRANCISCO INTERNATIONAL LESBIAN & GAY FILM FESTIVAL

27TH SAN FRANCISCO INTERNATIONAL LESBIAN & GAY FILM FESTIVAL

OiA Newswire

The San Francisco International Lesbian & Gay Film Festival, the world's largest and oldest LGBT film festival, returns for its 27th edition, which runs June 12-29, 2003 at the Castro Theatre and Herbst Theatre. This year, the Festival will screen 77 feature films and 194 short films from 32 countries.

The Festival opens on June 12 at the historic Castro Theatre with a screening of DIE MOMMIE DIE, the newest camp spectacle from the mind of Charles Busch (PSYCHO BEACH PARTY). Busch plays bitter fading chanteuse Angela Arden, whose children are plotting a murderous revenge. The film also stars Jason Priestley, Natasha Lyonne and Frances Conroy of "Six Feet Under." Busch, Priestly and Conroy are expected to attend the screening, which will be followed by the Opening Night Gala at the newly restored San Francisco Ferry Building.

Eighteen days and over 250 films later, the Festival will close on June 29th, the day of San Francisco's pride parade and celebration, with Alex Steyermark's hard-rocking PREY FOR ROCK & ROLL starring Gina Gershon (BOUND), Drea De Matteo ("The Sopranos") and Lori Petty (A LEAGUE OF THEIR OWN, TANK GIRL). Based on Bay Area rocker Cheri Lovedog's autobiographical play of the same name, Gershon plays a struggling musician ready to give it all up as she approaches the age of 40 until one last chance comes her way. After the screening at the Castro Theatre, step outside and into the night for a Closing Night Party under the stars.

Two widely-acclaimed new international films will receive Special Presentations during the Festival. On June 17, the Festival presents the French detective thriller GENDER BIAS, about a beautiful young transsexual with a troubled past who gets entangled with a local police chief. Robinson Stevenin won the Cesar Award for Best Actor at the "French Oscars," for his performance as transsexual Bo. From Argentina, the Festival is proud to present SUDDENLY on June 25. Compared to the early works of Jim Jarmusch and Fassbinder, SUDDENLY tracks two punk dykes named Mao and Lenin who kidnap a lonely salesgirl and give her the adventure of a lifetime. In addition to worldwide acclaim, first-time director Diego Lerman's SUDDENLY has won the Silver Leopard award at the prestigious Locarno International Film Festival and the top prize at the recent Istanbul Film Festival.

Maverick gay directors/producers Fenton Bailey and Randy Barbato will be presented with the 2003 Frameline Award recognizing their significant

contributions to gay and lesbian media arts at a special screening of their newest film, the feature film adaptation of PARTY MONSTER, starring Macaulay Culkin and Seth Green. Bailey and Barbato will also sit down for an interview with New York Times Critic-at-Large Margo Jefferson at a Close-Up/TimesTalks event at the San Francisco Public Library on June 25. The Festival will also screen two new documentaries from Bailey and Barbato's World of Wonder Productions: SCHOOL'S OUT: THE LIFE OF A GAY HIGH SCHOOL IN TEXAS and DARK ROOTS: THE UNAUTHORIZED ANNA NICOLE.

Queer youth are coming of age, as seen in a dozen new features and plenty of shorts. The makers of THE ADVENUTURES OF FELIX return with a teenage ice skater armed with a video camera in MY LIFE ON ICE. Kids also take up cameras in Darren Stein's nostalgic retro-documentary PUT THE CAMERA ON ME, a collection of outrageous home movies directed by the artist as a young gay boy in the LA suburbs in the mid-80s. The crushes of Chinese teen girls are shared in BLUE GATE CROSSING, and see the escapades of a very queer school in Canada's SECONDARY HIGH. From France, YOU'LL GET OVER IT captures the coming out of a typical high school boy, an 11 year-old boy copes with the discovery of his older brother's HIV positive status in CLOSE TO LEO, a young woman meets an exciting new friend and spirals downward to the brink of insanity in LAURA'S PARADISE. Documentaries capture queer teens in Iceland (STRAIGHT OUT) and Texas (SCHOOL'S OUT), as well as teens raised by QUEER PARENTS. The pain and pleasures of coming out and growing up are explored in the shorts programs Class Queers and Growing Pains, and meet the queer hip hop youth of the shorts program HomoHop.

With AIDS continuing to ravage the globe, the Festival recognizes the rise in filmmaking documenting the ever-changing culture of AIDS. Two new narrative features address how friends and family cope with the inevitable death of a loved one in Thom Fitzgerald's THE EVENT, starring Olympia Dukakis and Parker Posey, and Tony Ayres' WALKING ON WATER. Rory Kennedy's documentary PANDEMIC: FACING AIDS examines how AIDS is being fought around the world, and FIGHT BACK, FIGHT AIDS charts 15 years of ACT UP. The Festival will co-present a community forum in conjunction with a screening of the new documentary THE GIFT, which attempts to understand the controversial phenomenon of "bug chasing," actively trying to acquire the AIDS virus. And, the Festival is proud to look back with 10th anniversary screenings of the Academy Award-winning PHILADELPHIA and the Emmy Award-winning AND THE BAND PLAYED ON.

Queer history continues to be revealed, as seen in the collection of gay biographies at this year's Festival. Documentaries will share the diverse lives of Gore Vidal (THE EDUCATION OF GORE VIDAL), poet Audre Lorde (THE EDGE OF EACH OTHER'S BATTLES), civil rights activist Bayard Rustin (BROTHER OUTSIDER), director Luchino Visconti (THE LIFE AND TIMES OF LUCHINO VISCONTI), and lesbian activists Del Martin and Phyllis Lyon (NO SECRET ANYMORE). Two real-life murderers get the bio-pic treatment in THE CHILD I NEVER WAS and PARTY MONSTER. The shorts program Since You've Been Gone shares the stories of several members of the community who have recently passed away, including Kris Kovick and a tribute to Gwen Araujo.

Current events have led to an increase in the representation of Arab and Middle Eastern images in the Festival. Banned in Iran, an androgynous woman becomes an iconic voice in DAUGHTERS OF THE SUN. A sociology student discovers a history of homosexuality in his region as he comes out in THE PATH TO LOVE. Documentary filmmaker Ellen Flanders has just returned from the Middle East and will present her newest work-in-progress and a discussion of LGBT culture in the region in the QUEER DOCUMENTARY IN WARTIME: A NEW VIEW OF THE ISRAELI PALESTINIAN CRISIS. Renowned gay Israeli director Eytan Fox delivers the box office hit YOSSI & JAGGER, a touching romance set in the Israeli army.

Transgender images continue to be a revolutionary theme in queer cinema. In tense yet humorous FLYING WITH ONE WING, the first Sri Lankan film with a transgender character, a mechanic hides his female origins from his wife. A young transsexual gets entangled with a police investigator in the award-winning French thriller GENDER BIAS. The stories of two transsexuals, one FTM and one MTF, are documented in THE OPPOSITE SEX: JAMIE'S STORY and THE OPPOSITE SEX: RENE'S STORY. The empowering queer history of a small Mexican town is rediscovered in JUCITAN QUEER PARADISE. See the diversity of trans culture in two shorts programs, Intersex Explorations and Reel Transformations. And, don't miss the sex change vending machines in the surreal and animated PIKI & POKO: ADVENTURES IN STARLAND.

The Festival continues to highlight up-and-coming filmmakers by screening over 100 short films each year. In addition to popular shorts collections Fun in Boy's Shorts and Fun in Girl's Shorts, programs this year include a look at queer hip hop in Homohop, South Asian LGBT culture in Bhangra By The Bay, new shorts from Frameline Distribution in Shades of Pink, the role of music in queer lives in Sing Out, animals and the homos who love them in Animal Attraction, and the annual collection of the best new international shorts, Worldly Affairs.

936. Columbus Tx Houston-Hunks presents--Ex-councillor alleges gay crime errors

Newsgroup: rec.radio.scanner
Date: 2003-05-21 22:20:07 UTC

Ex-councillor alleges gay crime errors
by Phil Mills

Police are providing a "hit and miss" service to the gay community, it was claimed today.

Tens of thousands of pounds have been invested in tackling homophobic crime but former councillor Nimrod Ping said: "When gays or lesbians report incidents, they don't know whether they will be dealt with properly or badly."

Mr Ping, an architect and former chairman of the Brighton and Hove City Council police and public safety committee, said violence against gays was a major problem and it was essential police responded in a proper and uniform way.

He said: "It is getting ridiculous and dangerous."

Mr Ping complained he had not been invited to a meeting at Brighton police station tonight to discuss improving communications between the force and gay groups.

He said: "I was a councillor throughout the Nineties and am very familiar with the issues. It appears the police don't know which way to turn and are making lots of errors." He said he asked Chief Superintendent Paul Curtis, Brighton and Hove police commander, for an invitation, sent emails and messages to the station but was "told to get lost".

Mr Ping also thought The Argus should be invited to report on the meeting.

Mr Curtis today invited Mr Ping to attend the meeting but declined a request from The Argus. He said: "The meeting is designed as a first step to improve communication channels.

"I wrote to 40 lesbian, gay, bisexual and transgender organisations and invited representatives to the meeting. We could not invite individuals because where do you draw the line?

Mr Curtis said Brighton and Hove had broken new ground with the launch of the Anti Victimisation Initiative and the Brighton and Hove police Anti Victimisation Unit at the John Street station.

He said: "The AVI has given a much more meaningful and consistent service to victims of homophobic crime.

"The service we provide has improved but we urge anyone who believes they have been treated badly to tell us. That goes for anyone in the community."

One man supporting tonight's meeting is Alan Bond, a member of the Lesbian, Gay, Bisexual and Transgender community safety forum.

He said: "The idea is for us to report back to our groups and to reach down to the gay community and improve communications with the police."

Mr Bond said it would have been ludicrous to invite individuals: "This is the best mechanism to keep lines of communication open."

937. Columbus Tx Houston-Hunks presents--Gay man re-elected president of viatical association

Gay man re-elected president of viatical association

Orlando, FL (May 20, 2003) - M. Bryan Freeman has been re-elected president of the Viatical and Life Settlement Association of America (VLSAA). The election took place May 16 at a board meeting following the group's semi-annual general meeting in Savannah, Ga.

Freeman, who is the founder of Benefits America NA, Inc., an Atlanta-based life settlement broker that does business nationally, is beginning the second year of a two-year term on the VLSAA board.

"This year we had more interest than ever before in board-level service, so it is quite a testament to Bryan's ongoing leadership that his fellow board members - new and old - wanted him to continue to serve as president," says, Doug Head, executive director of the VLSAA. "Bryan has both a wealth of creative ideas and strong skills as a coalition builder, so his leadership is as dynamic as it is effective. Add to that the fact that Bryan has an unmatched knowledge of the life insurance and life settlement industries, and you can see why his colleagues appreciate his experience and his ideals."

In addition to electing board members (and the board, in turn, electing its officers), Head notes the Savannah meeting was particularly productive in regards to emerging projects. "Our members committed to develop a new Statement of Principles on responsible regulation and a Best Practices initiative," he says, noting members also recommitted to some previous initiatives.

"Along with setting new standards," Head says, "our members recommitted to our Standards of Fair Disclosure (of Risks Involved in Purchasing a Viatical or Life Settlement) and our Model Anti-Fraud Plan. In reaffirming our fight against fraud, President Freeman and our other leaders wanted to emphasize that we will not tolerate fraud - not on the part of consumers, nor from the insurance industry, nor from within our own industry."

Freeman, who says Benefits America is the largest and oldest gay-owned viatical and life settlement company in the country, has been a licensed life insurance agent for 24 years, received his "Series 7" securities license in 1984. He has been active in efforts to shape responsible regulation of the relatively new and often-controversial settlement industry. Last year, Freeman helped author, refine and gain passage of Georgia's first viatical and life settlement legislation. That legislation was signed by Georgia's governor the same week Freeman was first elected VLSAA president (in May 2002).

The VLSAA is an Orlando, FL-based non-profit trade association founded in 1994 to serve as a national resource center, providing information about viatical and life settlements. A viatical settlement allows someone with a chronic or life-threatening illness to sell their life insurance for a portion of its face value while they are still living. Life Settlements offer a similar option for seniors who may or may not face significant health challenges. The VLSAA, which currently has 28 member companies, is the industry's largest and oldest trade and professional organization.

You must admit it's a quirky set up ...

On the one hand, employers can't ask sexual orientation before they hire,
and they can't stop an employee from announcing his orientation once he
is hired, and then anyone who gets terminated can claim that they
were terminated because of their orientation.

Then there's a fine line between announcing one's
orientation and harrassing someone.

941. MilAir VHF/UHF Dxpedition Tampa, FL + CoastGuard & MacDill Info

Newsgroup: rec.radio.scanner
Date: 2003-05-21 23:01:20 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3ECC0540.5010904@licensed4fun.com>
Source record: 30871

Tuesday morning I left for a fishing trip to Tampa, FL and returned Wed. afternoon. I thought this would be a good time to give my new "mobile shack" (http://www.milaircomms.com/mobile_radio_shack.html) a good workout. The antenna I used for the trip was the famed NilJon mobile, which is turning out to be a great antenna.

Below you'll see my logs for which I hard comms on during the two-day trip. Since I was either driving or fishing I didn't always have a chance to write down callsigns or times. However the freqs do provide a good resource for active Military comms for others either traveling to or who live in the Tampa, FL area.

One interesting note, its not often you hear Coast Guard assets using UHF here on the Florida North or Central Atlantic Coasts. But while in the Tampa, Clearwater, St. Pete area it was very common to hear CG aircraft/ships coming up on both VHF and UHF freqs. Also its been noted that here in Daytona most USCG comms (in fact nearly all) are now encrypted. Several months ago Robert Wyman pointed out that many USCG comms in the South Florida area have been encrypted as well. It was refreshing to hear an area in which the USCG stills speaks in the clear!

I had an 'unreliable' list of freqs for the MacDill AFB 400 MHz trunk system. I don't know if MacDill actually uses it or not. In the two days I was within 20 miles I didn't hear anything on the 5 freqs which I've seen listed for their system. Not even a control channel. As seen by the below logs you'll see that maintenance, security, and fire/crash still use the VHF-FM freqs.

The entire time there I hard no aircraft comms with MacDill, is there any aircraft ops at MacDill anymore? This is my second trip to the area without seeing a single aircraft land or depart MacDill, other than CENTCOM is MacDill used for much anything else? From time to time I'll hear an aircraft contact Lighting Ops informing MacDill they'll be landing however it doesn't see to be used much.

Hope this list provides some useful information for anyone in the Tampa area or wanting to travel to the area. If you like Coast Guard comms you'll be in heaven. 157.0500, 157.0750, 157.1500, and 381.8000 are heavily used.

Oh BTW Grouper are really biting as well as Spanish Mackerel, just finished clearning a cooler full!

George

Brings an interesting recollection. Out here we have large ferries and being an outdoor person I'm usually out on deck, and
one warm summer late afternoon was no exception. Looking out from starboard was another cruise ship (there are lots of them in Vancouver at this time of year) dead in the water. Someone closeby was fiddling with a scanner to lock onto radio signals. The cruiseship apparently had engine trouble and had to be towed back. This guy had a BC245 XLT type scanner.

But for the interest of marine operations and so forth, it would be interesting to hear radio activity aboard while stretched out
getting sun.

Sure would beat having to watch plus sized senior ladies in spandex or male tourists in the worst polyester hawaiian shirts
walk by. Or hope the cutie blond picks you over the hunk trying to hit on her with his barrel chest and Colgate smile.

And how many times can a game of shuffleboard get interesting?

Hell if it were aboard one of the cruises up to Alaska, I'd be taking pictures of the scenry, animals and have small size marine charts with me plus my portable scanner rather than gambling away my savings account in the casino to impress the chicks.

Yup. Only one thing to say: Same shit you had on your site last month.

What is the big deal about 3 people who can't get the software to work? The software works for me with NO HELP from anyone. Several others on this group have said the same. All three people you quoted on your website got their money back, according to their letters, so where's the ripoff? It either works or it doesn't, if it doesn't they can return it. Seems reasonable to me. The stores continue to stock it so it must be selling - most retail outlets will not stock an item that doesn't.

I don't get it. You are asserting that 2 and 2 adds up to 22 and fail to adequately defend yourself when called on it. So why would anyone give a shit what you have to say? Do you just enjoy making an ass-clown of yourself? You must!

I'm still waiting for an INTELLIGENT ANSWER from you. But all you can come back to me with is "spew spew spew". Most impressive. And you still haven't told us all what your big fancy gubmint job title is. Why not? You waiting to get promoted to burger flipper first?

NO!
Once your existing files are 'cleaned' of past garbage your filters should take care of most future garbage (if you set up your
filters well).

Here are some SUBJECT keywords I use (I'd like to see other users choices as well):

houston-hunk
jesus
god
shit
fuck
politic
crap
israel
france
psycho
rights

... you get the idea!

There are inherent problems with this choice of filters for subject lines..
at the very least with the words france and rights, as there can be, and has
been, much legitimate on topic discussion of subjects containing those
words.

Just my -W-23 for the day.

>One interesting note, its not often you hear Coast Guard assets using
>UHF here on the Florida North or Central Atlantic Coasts.

CG use of UHF is very common in Central East Coast FL.
I hear CG assets almost daily in comms with Miami CGAS, Clearwater CGAS, CG Sta Port Canaveral, and CG Sta Ft Pierce on 381.8. Two or three days a week we get CGAS Clearwater HC-130s into Patrick for training, and on nearly every flight they raise Clearwater on UHF informing of their arrival here, departure etc. And everybody knows how many USCG comms we here around launch time !!
We have some of the busiest USCG activities anywhere because of the amount of boating traffic from the north that passes through our waters en route to the Bahamas, and because of the USCG involvement in anti-drug missions in those waters. Again UHF freqs are heard in use.
Finally, Port Canaveral is the second busiest Cruise Ship port in the nation, and the USCG has been escorting the cruise ships into and out of port. A day does not go by when at least one CG helo transitions our area. Inevitably they contact on of the CG stations mentioned above, and at least half of the time it is on UHF. Today it was CG 6016 who was in our area. Although he was maintaining comms with ATCs on conventional ATC freqs, he was also maintaining guard with CG Group Mayport via 157.15. Heard lima charlie here.
Problem is that most of us do not wish to divulge active Law-Enforcement and Security activities and do not post such Coast Guard comms in our logs, so some people might get the impression that there is less USCG radio activity here than there actually is.

Chrissy Gephardt, the 30-year-old daughter of Democratic presidential candidate Dick Gephardt, feared that she would lose her parents' love and hurt her father's political career when she told them two years ago that she was gay.

In an interview with People magazine, Chrissy Gephardt described how difficult it was for her to tell them that her four-year marriage to Marc Leibole, a favorite of her parents, was over and to discuss her sexual orientation.

"I was basically saying, 'I'm not who you thought I was, and now when you have lunch with your friends, you can't say 'her husband,' but 'her lesbian partner,"' she said in describing the teary conversation.

Dick Gephardt and his wife, Jane, immediately reassured their daughter of their unconditional love. The Missouri lawmaker, who stepped down last year as House Minority leader to focus on his White House bid, said Chrissy and her partner, Amy Loder, are "a great pair, and we are happy for them."

Chrissy Gephardt recently left her Washington, D.C.-job counseling abused and mentally ill women to work on her father's campaign. She is not the only gay child of a 2004 candidate; Mary Cheney, daughter of Vice President Dick Cheney, also is a lesbian.

969. More from Houston-Hunks--Anti-Gay Group Boosted by Scalia

Anti-Gay Group Boosted by Scalia
Monday, 19 May 2003
PHILADELPHIA -- U.S. Supreme Court Justice Antonin Scalia attended a $150-per-plate dinner Tuesday night in Philadelphia hosted by the Urban Family Council, a group whose founder is suing the city in an attempt to overturn its same-sex domestic partnership law.

Antonin Scalia
The UFC said the dinner was not a fundraiser and that the ticket price was meant only to cover the cost of the banquet, held in honor of Cardinal Anthony Bevilacqua, who leads the Roman Catholic Archdiocese of Philadelphia.

"It's nice to . . . have a friend like Justice Scalia."

The news agency notes it is illegal for federal judges to raise money for political, charitable or civic organizations, and that they are prohibited by law to use the prestige of their office for that purpose. There is some question as to whether Scalia violated the letter and intent of that law by attending the event.

"We just thought, 'What better way to honor Cardinal Bevilacqua than to have a sitting Supreme Court justice up to speak?"' said UFC founder and anti-gay activist William Devlin. "It's nice to be able to say you have a friend like Justice Scalia."

Devlin is suing to overturn a Philadelphia registry that grants same-sex couples the right to register as "life partners." City officials said the law's primary purpose is to allow the gay partners of metropolitan employees to receive health benefits.

A Pennsylvania appeals court sided with Devlin last year, saying the city had intruded on the state's power to define marriage. The city appealed to the state Supreme Court, which hasn't yet indicated whether it will take the case.

On its Web site, the Urban Family Council condemns homosexuality as an immoral lifestyle choice, not a genetic predisposition, and encourages self-identified gay men and women to seek help in "becoming straight."

970. More from Houston-Hunks--Age of gay consent clears first hurdle

Age of gay consent clears first hurdle
May 22, 2003

THE Carr Government's attempt to lower the age of consent for homosexual males in NSW to 16 years has cleared its first hurdle easily.

A conscience vote of MPs in the NSW Legislative Assembly, or lower house, passed the bill to bring the age of consent for homosexual males into line with the rest of the community by 54 votes to 32 last night.

Four MPs were absent for the vote while one MP, Labor's John Bartlett abstained.

The bill was passed after including an amendment to ensure the new laws would not be retrospective.

It now moves to the upper house where MPs agreed the result will be closer.

Seattle Men in Leather Gearing up for Equinox IV - A Leathermen's Weekend

It is with great excitement and anticipation that Seattle Men in Leather announces the rebirth of a club tradition with the return of its annual Equinox Run Weekend next September. Equinox IV - a Leathermen's Weekend is set to take place September 5-7, 2003 at a private camp near Olympia that SML has rented with 160 secluded and wooded acres. Great food, drink, heated cabins, tent sites, play cabins and more await you. Equinox will be a weekend that fosters attitudes of camaraderie and community in a spirit of pride, fun and unity within the men's leather, levi and uniform lifestyles. Our theme is "Renewing the Tribe", so the emphasis will be on building friendships and renewing old ties. There will be the Tribal Instinct Educational Workshops, Tribal Games Competition, Tribal Survivor Game Show competitions, hiking, swimming, and a great deal of fun and fellowship.

And the group's leaders are also promising plenty of opportunities for more private recreational interests as well. Nighttime gatherings around the campfire promote the new friendships and camaraderie that develops at Runs like this one. The weekend, for men only, is designed to entertain, introduce, and renew friendships and relationships. In fact, the theme for this run is entitled, "Renewing the Tribe". SML's educational arm known as Tribal Instincts will be hosting a number of sessions about the leather lifestyle ranging from forums for beginners to more advanced sessions for the experienced wanting to learn more. Also, afternoon and evening social hours are scheduled, along with entertainment and orchestrated events and competitions to keep the most enthusiastic leather men and boys busy.

The weekend following Labor Day generally means still nice warm mild weather for the Pacific Northwest, and SML intends to take advantage of that by hosting this largely, outdoor 3 day event. You can stay in the heated cabins or you can pitch your own tent. Meals will be prepared by the camp staff and are enjoyed family style as a group. The camp is fully equipped for tennis; basketball, swimming, sunbathing, hiking and boating and we will be setting up some play spaces for your use. There are many activities, games, workshops and such planned for the weekend or you can simply sit back, relax and socialize. Early registration is encouraged, as space is limited to two hundred leather men.

Registration fees received between May 1st thru August 15th cost only $150 ($125 for SML members), and after August 15th, goes up to $175 ($150 for SML members). Registration covers entrance to the camp, 5 meals and snacks, all facilities including cabin or camping, and hosted social events. Participation is limited to 200 men, and pets and motor homes are not

permitted. For more information and registration forms, you may check out the Equinox IV website at http://www.seattlemeninleather.org/equinox/. Equinox applications are also available at the Cuff, the Eagle, Club Z, and many other retail outlets in Seattle and through out the Pacific Northwest. Specific questions regarding the Equinox IV Run can be address at: Equinox@seattlemeninleather.org.

Seattle Men in Leather is proud to bring you a Equinox IV - A Leathermen's Weekend sponsored by: Miller Brewing Company and Columbia Distributors. We hope that you will join us this September as we "Renew the Tribe".

Seattle Men in Leather founded in 1989, is a nonprofit, gay men's social group promoting with power and pride the Seattle's Men's Leather Community. With over 260 members, SML host's frequent social events including monthly brunches, dress code socials, potlucks, dinners, pool parties and other events throughout the year that fosters brotherhood for those of like interest in leather pride. As a community service, SML also educates its members by sponsoring educational forums in areas of mutual interest such as BDSM and the promotion of safer sex through its monthly Tribal Instincts Workshops. These events are open to everyone in the Seattle men's leather community, including the inexperienced that desire to broaden their skills in such areas. Each year, the members of SML commit themselves to hosting several fundraisers and elect a socially responsive organization, as the beneficiary for its fundraising, and the Lambert House GLBTQ Youth Center has been SML's choice for six years now. In the last three years, SML has raised over $12,000 for Lambert House. For more information on Seattle Men in Leather, please check out our website at http://www.seattlemeninleather.org

Netherlands: HIV is up among gay couples
Gus Cairns, Positive Nation
Wednesday, May 21, 2003 / 04:03 PM

The vast majority of HIV infections in the Netherlands among gay men are occurring between partners in long-term relationships rather than via casual sex, a Dutch epidemiologist has found.

The safer-sex message seems to have endured better in the Netherlands than in the United Kingdom. Whereas 45 percent of British gay men reported having at least one experience of unprotected sex last year, in Holland the figure was only 25 percent.

However, the prevention messages were aimed squarely at encouraging condom use in casual sex. As a result, the vast majority of new HIV cases among gay men in Amsterdam are now occurring within steady, committed relationships.

Dr. Maria Xiridou of the Amsterdam Municipal Health Service found that no less than 86 percent of new HIV infections in the city were occurring within long-term relationships.

"Risk-taking with steady partners remains at high levels, and infection from steady partners is now the dominant mode of transmission," she told the Reuters Health press agency.

She added: "Different prevention measures may have to be developed in targeting high-risk behavior with each type of partner, such as counseling HIV-positive men and their steady partners." She also advocated that more attention be given to HIV testing for HIV-negative men who are in monogamous relationships with positive partners.

BUENOS AIRES, May 20 (AFP) - Buenos Aires on Monday rubber-stamped legislation allowing gay couples to register, becoming the first city in Latin
America to do so.
Same-sex couples who can prove they have lived together for at least two years may share labor and social security benefits under the legislation.
Heterosexual couples -- who previously had to prove five years' cohabitation -- as well as gay couples, will benefit from the new law which does not, however, establish inheritance or automatic pension rights.
The Civil Registry estimates 5,000 gay couples may benefit from the law.
The measure was signed into law by city mayor Anibal Ibarra of the center-left Frente Grande party, after provoking intense public debate in the
predominantly Roman Catholic country.
The civil union law was approved last December in the municipal legislature, when some 29 legislators voted in favor and 10 against.
President of the Argentine Homosexual Community (CHA) Cesar Cigliutti applauded the measure as a victory for same-sex couples and said he now intends to campaign for its introduction at national level.

Gay Iraqi blogger resurfaces, writes again
Christopher Lisotta, Gay.com / PlanetOut.com Network
Wednesday, May 21, 2003 / 03:59 PM
Salam Pax, the anonymous twentysomething Iraqi Internet writer whose blog attracted readers interested in learning about life under the government of Saddam Hussein, is back online after remaining silent during the worst days of the war.

"Let me tell you one thing first," Salam Pax wrote in his first posting since the fall of the Saddam government. "War sucks big time. Don't let yourself ever be talked into having one waged in the name of your freedom. Somehow when the bombs start dropping or you hear the sound of machine guns at the end of your street you don't think about your 'imminent liberation' anymore."

The writer, a 28- or 29-year-old gay architect who spent part of his life in Europe, went offline on March 24 after power went down in Iraq's capital city, and the silence heightened anxiety among readers about his safety. For months Salam Pax had written about the buildup to the war and the first days of coalition bombing.

Fellow blogger Diana Moon received a call from Salam Pax's cousin on May 6, telling her to call a satellite phone number. "Salam sounds fine," she wrote on May 7, which coincided with his first installments since March. "We discussed as many things as we could in a short amount of time."

A secular Muslim, Salam Pax (a pseudonym that means peace in Arabic and Latin) gained readers from around the world as he ridiculed the Saddam Hussein regime while also criticizing the Bush administration's approach to the dictator. Some readers of his blog have speculated Salam Pax was a hoax, since he wouldn't include his phone number or other personal information about himself. But his detailed accounts of life in Baghdad convinced most he was legitimately writing about the besieged country from the inside.

"American civil administration in Iraq is having a shortage of bright ideas," he wrote in his May 9 installment. "I keep wondering what happened to the months of 'preparation' for a 'post-Saddam' Iraq. What's with the juggling of people and ideas about how to form that 'interim government'? Why does it feel like they are using the (let's-try-this-let's-try-that) strategy? Trial and error on a whole country?"

Despite his frustration with the chaos of the coalition takeover of Iraq, Salam Pax wrote he was glad to see Saddam Hussein out of power.

"The truth is, if it weren't for intervention this would never have happened," he wrote. "When we were watching the Saddam statue being pulled down, one of my aunts was saying that she never thought she would see this day during her lifetime."

GLMA Protests Government Censorship of LGBT Health Research

SAN FRANCISCO ☐ The Gay and Lesbian Medical Association today announced that it will send a letter to President George W. Bush, Health and Human Services Secretary Tommy Thompson, and the Directors of the National Institutes of Health and the Centers for Disease Control and Prevention protesting widespread reports of censorship and monitoring of lesbian, gay, bisexual, and transgendered health research by govenrment funding agencies. Recent reports in The New York Times and prestigious journals such as Science have underscored the seriousness and extent of the problem. Staff members within the Department of Health and Human Services have been cautioning prospective grant applicants that e-mails and other communications are being screened for sensitive keywords such as "commercial sex workers," "needle exchange," "men having sex with men," "prostitutes," "transgender," and "harm reduction." Furthermore, some program staff members have been reprimanded for the use of such terms, which have been called "inappropriate language."

GLMA has created a letter to which health care providers, researchers, and teachers may sign on through the GLMA website at www.glma.org or through a direct link at http://www.gayhealth.com/templates/0/glama/letter.html .

"We urge everyone in health care to sign on to this letter," said GLMA President, Kenneth Haller, MD. "Over the coming days we hope to gather over one thousand signatures to deliver to the Administration. Information provided by sources such as the Centers for Disease Control and Prevention has been trusted in the past because it has been based upon unbiased, scientific studies. The scientific credibility of even the CDC under the current Administration has begun to become suspect. For example, an online fact sheet on condoms and sexually transmitted disease prevention was pulled from the Centers for Disease control website in July 2001."

Haller concluded, "We cannot allow the integrity of health research and the health of LGBT persons to become victims of political ideology."

When Senator Rick Santorum, a Pennsylvania Republican, delivered an ugly attack on gay Americans last month, President George W. Bush rushed to defend him. The president called Santorum, who had just equated homosexuality with polygamy and incest, "an inclusive man." At the same time, the Bush administration has been appointing federal judges who are hostile to equal rights for gay men and lesbians. Two nominees with troubling records - one who argues in support of laws against gay sex, another who has spoken out against "queers" - are now headed to hearings in the Senate. Every senator who opposes discrimination should be prepared to ask them hard questions, and to vote against one, and possibly both.

Bill Pryor, the Alabama attorney general, is a nominee for the 11th U.S. Circuit Court of Appeals in Atlanta. He submitted a brief to the Supreme Court this year in defense of a Texas law that criminalizes sexual relations between gays. The brief puts sexual relations between gays in the same category as necrophilia, bestiality and pedophilia, and argues that states have the right to punish as criminals people who engage in gay sex. Pryor's supporters say he was just doing his job, since Alabama has a similar law. But he had no legal duty to do so, and other states with such laws did not file briefs supporting Texas.

Claude Allen, who has been nominated to the 4th U.S. Circuit Court of Appeals in Richmond, Virginia, is an official in the federal Department of Health and Human Services. He made a name for himself in conservative circles as a spokesman for the 1984 re-election campaign of Senator Jesse Helms of North Carolina. During the campaign, Allen was quoted as saying that the Democratic opponent, James Hunt Jr., then governor, was vulnerable because of his links with "the queers." Allen's supporters insist that in his current job he has worked productively with gay and lesbian groups.

Pryor and Allen are only the latest examples of the enemies of gay rights whom conservative ideologues in the Bush White House are trying to impose on the courts. Senators of both parties should speak out against Pryor and question Allen closely about whether he has abandoned the offensive views he expressed at the start of his career. denver council 2003
Candidates spar over gay-rights stance
By Ryan Morgan, Denver Post Staff Writer
The two women vying for the District 10 City Council seat are both working hard to secure votes in the gay community - and are in a nasty dispute over who is a stronger gay-rights supporter.

In the central Denver district that includes the Country Club and Capitol Hill neighborhoods, Caroline Schomp and Jeanne Robb have produced campaign literature that targets members of the gay community - and pledges to protect their interests.

Robb's website, for example, proclaims her support for Denver's anti-discrimination ordinances and domestic partner benefits, and says she is "committed to the continued work of making Denver a safe place for the gay, lesbian, bisexual and transgendered community to live, work and play."

Schomp's ads proclaim that she "will stand with the gay and lesbian community on the issues that are so critical. Prosecution of hate crimes. Support of same-sex adoptions ... partner benefits."

But Schomp says one of Robb's ads is "disingenuous, at best" in its claim that Robb helped to overturn a discriminatory zoning ordinance in 1989.

Robb, in turn, says she's a strong proponent of gay rights, and accuses Schomp of "harping on the past."

The dispute centers around a 1980s incarnation of the city's R-0 zoning, which allowed only married adults to share the same house.

The zoning ordinance forced many gay and lesbian couples - and heterosexual unmarried couples - who shared homes to sell after their neighbors reported them to the city.

In her campaign literature, Robb says she helped craft a compromise that eliminated the restrictive ordinance, a claim Schomp says is at odds with reality.

In 1989, following a lawsuit filed by an unmarried couple sharing the same home, the city decided to amend the ordinance in order to avoid losing a court battle.

Changing the law was a contentious issue, particularly for the gay community, whose members wanted the right to share a home, recalls Tea Schook, who first became politically active because of the zoning issue.

"If (neighbors) saw a gay couple, if they found out the couple wasn't married, they would turn them in," she said.

Schook remembers that Robb, who was president of the Cherry Creek Improvement Association, lobbied to keep the restrictive ordinance in place.

"I remember being very stunned by it," Schook said. "It felt very anti-gay to me."

Robb did oppose changing the zoning law, but says her position had nothing to do with opposition to gays.

"The real concern was, were we opening up neighborhoods that had been single-family residential to rooming houses?" she said. "Was that a legitimate concern? It sure felt like a legitimate concern. Was that the only concern? Probably not."

Robb said she brought forward a compromise that addressed the issues her neighborhood group was worried about.

U. of Scranton, other Jesuit schools create gay-support programs
By ERIC TUCKER
The Associated Press

PHILADELPHIA - Administrators at the University of Scranton have spent the last few years grappling with a dilemma familiar to many religious institutions.

They wanted to add more resources for gay and lesbian students, but they also needed to remain consistent with the school's Jesuit and Catholic ideals.

Now, the small college in northeast Pennsylvania is putting the finishing touches on a campus-wide support program for its homosexual students. Under the "Ally" program, scheduled to begin next fall, interested students, faculty and staff will be trained - though it's not clear by whom - to listen and sensitively respond to concerns and questions from gay and lesbian students.

"Our role will be to do all we can to minimize issues of discrimination and homophobia," said Vincent Carilli, the university's vice president for student affairs. "We're not going to be dealing with issues of advocacy."

The distinction is crucial for Scranton and other Roman Catholic schools that say they welcome gay students but, because of church policy, refuse to condone their lifestyles. Many Jesuit schools already have in place programs like "Ally" that are warmly accepted on campus, provided they don't advocate positions contrary to the church.

At Boston College, for instance, the former head of the student body met for nearly a year with the university president, William Leahy, about a group that would support homosexual students and openly discuss issues of sexual orientation. The program, "Allies," was formally approved last month with a mandate - "to advance understanding of issues, concerns and needs regarding sexual orientation" - nearly identical to the group at Scranton.

"We're trying to be true to our mission, and our mission is 2000 years of church teaching and 400 years of the Society of Jesus's existence," said Boston College spokesman Jack Dunn. "We're always trying to be respectful of that tradition, while addressing the relevant issues of the day."

Many "Ally" programs are initiated by students seeking to educate their peers about issues of homosexuality and don't contradict religious dogma.

Liz Pascal, who co-founded the "Ally" program at Marywood University, a small Jesuit school also located in Scranton, Pa., said she drew up an educational manual for prospective "allies." She estimates that a few hundred people have undergone the requisite training, which includes discussions of gay stereotypes and homophobic attitudes.

And despite some setbacks - one flyer advertising the program was tossed in the toilet, another was defaced with the words, "Not at our school" - Marywood students and administrators have been generally receptive, she said.

"It gives exposure to the hidden minority, to the invisible minority," Pascal said.

Another "Ally" program at St. Michael's College, in Burlington, Vt., has a mailing list of about 200 people and between six and 12 active members, said Linda Hollingdale. The group, which rose out of a similar gay support group formed in the 1980s, has hosted speakers such as the mother of Matthew Shephard and Danny Roberts, a gay cast member from MTV's "The Real World."

But conflicts do happen. Administrators at Loyola Marymount University in Los Angeles initially balked at student efforts to bring a transgender speaker to campus. And certain issues - same-sex unions in particular - have sparked fundamental disagreements.

"There may be topics or issues that make some folks uncomfortable, but there's an underlying belief that there's a space for it all," Hollingdale said.

Some students involved in "Ally" programs say it's an important step in addressing the needs of gay and lesbian students on religious campuses, but they hope to see broader acceptance.

"If that's what we get right now, it's fine," Pascal said. "Do I want to see that change in the future? Yeah, maybe in my lifetime. I'll work toward it."

979. More from Houston-Hunks--Phelps targets gay scholarship winner

Phelps targets gay scholarship winner
David Ryan Alexander, Gay.com / PlanetOut.com Network
Wednesday, May 21, 2003 / 03:55 PM
The graduation ceremony of Des Moines, Iowa's Lincoln High School will receive some unusual attention this year, as outspoken anti-gay Rev. Fred Phelps and members of his Westboro Baptist Church protest the graduation of a student who won a scholarship honoring Matthew Shepard.

The scholarship was created as a memorial to Shepard, a gay Wyoming college student who was tortured and killed in 1998. His funeral was also picketed by Phelps.

On May 31, Phelps plans to demonstrate outside Veterans Memorial Auditorium, where the graduation ceremony will take place, to protest this year's scholarship recipient, a gay student named Julius Carter.

"About 15 people will attend," Shirley Phelps-Roper, Phelps' daughter and spokesperson for the church, told the Gay.com/PlanetOut.com Network on Wednesday. "The plan is to stand peacefully on the sidewalk like we always do and remind these people that there is a God, that there is a day of judgment and that it's not OK to be gay."

Carter, who is on the football team, the school choir and is senior class president, said he was concerned that the demonstration would disrupt the ceremony for his fellow students. "The last thing I want to do is be someone who hinders their happiness," he told the Associated Press.

As for himself, he said, "I could care less what they say about me because I go through that all the time. By this happening, (Phelps) is going to see that no one in Iowa cares because the way he presents himself is wrong."

Lincoln High School's principal, Al Graziano, told the A.P. that he was dismayed when he read a press release announcing the scheduled protest and condemning Lincoln High School and the local school district. He said he feared protestors would take away from his students' graduation.

"It's their graduation day, and we want to keep the focus on the graduates. We plan to still have the best ceremony we can have," he said.

In response to comments about disrupting the ceremony for other students, Phelps-Roper replied, "They are involved in it -- everyone is involved right up to their eyeballs. If they're not standing up and saying, 'no no no,' then they're not doing their duty to their Lord God."

After graduation Carter, who has been openly gay for about two years, plans to attend the University of Iowa and study pre-medicine. His scholarship

will cover tuition, books and fees for four years.

980. PRO 2066 inf needed

Newsgroup: rec.radio.scanner

I've been thinking about purchasing a PRO 2066 for mobile scanning. The truck has a DOUBLE DIN space for the stereo so I thought of
buying a single din AM-FM stereo and the PRO 2066 scanner, then putting both into the double din.

My questions are these:
Does the PRO 2066 require any special mounting hardware such as BRACKETS and/or spacers to properly install in the DIN slot?

Is the PRO 2066 really any good as far as mobile scanners go (I know very little about them)?

TIA
Vic

Yes a discone is good for something, and that is in covering a wide range of
frequencies. They just don't work as well as an antenna cut for a narrow
band of frequencies.

They are really pretty much different radios. I have a Pro43 and have had it since it forst came out. It performs very well, with the only drawback I found being some intermod in the 160 MHz railroad range.

I also have several 2004/5/6 series radios. The 2004's I have had were relatively sensitive except in the 800 band. The 2005 were pretty good across the board, but very hot in VHF Highband. One of my 2006's excelled in low band, the rest were pretty consistant across the bands, much better on 800 than the 2004's.

While they were of the same generation the PRO43 and 2005/6 radios had several differences. The Pro43 had no WFM mode, did not have complete 25-550/760-1300 MHz. coverage like the 2005/6, 299 channels instead of 400 and a few oher differences.

Both radios were the creme of the crop in those days. The 2004/5/6 radios ruled the roost until trunking scanners came about, and the PRO43 was a big hit with military and airshow fans due to it's unique (to HH scanners) ability to monitor the UHF aircraft band.

I still have a PRO43 and several 2005/6 radios. You can have my guns, but you will need to pry these out of my cold dead fingers.

I live in north Missouri and we've had a lot of
tornados lately.

Ive decided I should get a good SAME weather radio.

However I haven't kept up on the new ones.....

Was wondering what brand/model you all feel is the best
one right now? Radio Shack stuff? Midland stuff?
What?

Thanks in advance!

Hi Steven,

One other person mentioned a similar way to yours for blocking. Great ideas!
There are reasons I went through the lengthy process in my posts:

1. there are different versions of OE. I use v5.5, many use earlier or later versions. Although the different versions are similar
in many respects, there ARE differences (OE 6 provides functions my version does not have)
2. this is the greater reason. Going through the lengthy procedure gives a user GREATER CONTROL over the filter scheme. Fact is I
have very FEW blocked senders (a LOT of us, including myself OCCASIONALLY go OT) so instead of blocking them, I prefer using
KEYWORDS to block OFF TOPICS.

Works for me!

Vic

I installed my 2066 in the center console of my 97 Monte Carlo just using a car stereo install kit from Wal Mart. If you can live with only 150 channels and you use an external speaker, it's a decent mobile rig. Not perfect, but decent.

The big advantage of the PRO-2004/5/6 series was the inclusion of ten pre-selector filters in the front end. The appropriate filter is automatically switched in by the microprocessor as the radio scans. This greatly cuts down on intermod.

Speaking of intermod, NO HANDHELD unit will ever have the intermod immunity of a good base unit. To reduce battery current drain, heldhelds do not use high IP3 mixers, and generally make compromises to reduce size and weight.

In my experience, hooking any handheld scanner or transceiver to a good outdoor antenna results in terrible intermod if there are any strong local signals.

It was a really cool (and rather expensive) portable TV. As a scanner or
shortwave radio though I wouldn't recommend it. If it had a numeric keypad
and/or came with software I might have kept it.

Secondhand no doubt, as the radio was discontinued years ago. I bought one on clearance at RS for $89.97, and it has served me well since then. I have not installed mine in a vehicle; I have always used it indoors, powered by an E. F. Johnson regulated power supply.

Though the radio is DIN-size, it came with a simple bracket and short section of power cord for mounting it under the dash. It has a centrally located threaded hole on either side by with which it is attached to that bracket. I'm guessing that, whatever vehicle you have in mind, you would use these holes when mounting the scanner.

Here's a review.
http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=fi&class=recv&num=011

Again, I have no complaints. Notice that it does go down far enough to scan CB, which is unusual for a scanner.

Best wishes.

_ _ ··· ···_ _ · _ · _ · __ · __

Attorney General Ashcroft is visiting an elementary school.
After the typical civics presentation to the class, he announces, "All right, boys and girls, you can all ask me questions now."
A young boy named Bobby raises his hand and says, "I have three questions:
1. How did Bush win the election with fewer votes than Gore?
2. Why are you using the USA Patriot Act to limit Americans' civil liberties?
3. Why hasn't the US caught Osama Bin Laden yet?"
Just then the bell sounds and all the kids run out to the playground.

Fifteen minutes later, the kids come back in class and again.
Ashcroft says, "I'm sorry we were interrupted by the bell. Now, you can all ask me questions."
A young girl named Charlene raises her hand and says, "I have five questions:
1. How did Bush win the election with fewer votes than Gore?
2. Why are you using the USA Patriot Act to limit Americans' civil liberties?
3. Why hasn't the US caught Osama Bin Laden yet?
4. Why did the bell go off 20 minutes early?
5. Where's Bobby?"

Remember this when they come for you.

The MilAirComms.com Log report for 5/22/2003
All times are Eastern Time, frequencies in MHz and
unless other wise noted modulation type is AM.

Note: All CIA Comms and comms decoded with the SuperSecret Captain
Crunch Decoder ring have been removed from this log before posting.

TOMCAT 5 (S-3)
Time: 0901 enroute to Pinecastle for bombing run; Dropping MK78's
(500 lbs); 0929 river run to NAS Jax at 1500'; it appears these S-3 do
not have VHF radios as they stated they needed a "uniform" as we're not
VHF equiped.
Frequency: 357.0000 (Pinecastle Rng Ctrl); 380.8000 (Pinecastle
Target); 379.9000 (Jax App 181-269 deg)

unid
Time: 0904 requesting current WX at SGJ (St. Augustine)
Frequency: 334.6000 (Patrick Metro)

MULLER ##
Time: 0925 requesting 6Y
Frequency: 339.7000 (SEALORD Discrete); 267.5000 (SEALORD)

unid
Time: 0932 sounded like Air-Air, not Center.
Frequency: 323.2000 (ZMA Center or VS-32 Air-Air)

unid
Time: 1132 troubleshooting some alt or battery problems in aircraft
Frequency: 120.3250 (US Customs)

unid
Time: 1133
Frequency: 380.3000 (Miami Center)

LIFTER 31 (C-17?)
Time: 1133 getting WX.
Frequency: 344.6000 (Patrick Metro)

unid
Time: 1135
Frequency: 355.8000 (JAX NAS Tower)

PELICAN 711
Time: 1142 testing the sending of text messages.
Frequency: 285.0000 (TSCC - Fiddle)

MUSTANG ??
Time: 1153 P-51 doing low level training the "foxtrot area",
possibly in R-2901
Frequency: 126.1500 (Avon Park Twr??)

MAKO 11 (F-16's Homestead)
Time: 1410 working Avon Park Bombing Range
Frequency: 285.7250 (Avon Park Rng Control)

Coast Guard ??

Bobby was actually a homicidal bomber who got taken out of action a bit
prematurely. His real name was Abobas...

You know, that's a darn good question. I don't have the answer, but I'd suggest that Uniden makes them too. Google has a sponsor, with the URL http://www.weatherradiostore.com/?s=g . (Obviously, the "?s=g" part of the URL makes sure that Google gets paid for the click.) There doesn't seem to be a group specifically for them. They get discussed on CB forums, FRS forums, and scanner forums. I'll bet an e-mail to the meteorology/environment science departments at Oklahoma State <http://osu.okstate.edu/> or University of Oklahoma <http://www.ou.edu/> would get some answers. I mean, who would pay more attention to tornados?

I have a Uniden BC278CLT AM-FM-scanner-SAME weather radio. I have never tried it out on the SAME function.

Good question, and on topic.

Best wishes.

I am going to rewrite/inter this stuff one more time and see what I can
do. If I save to a disk before I use it then I seem to have everything
on the disk and can reload it.
As I have played with it the last few weeks I have learned about how to
set it up so I can L/O stuff that I don't want to hear at times.
I am about ready to try loading a "trunk" setup and see if I can get it
running. It took me 16 hours to learn to write, load and use WinScan the
first time.
I would be happy with it if it would just stop corrupting the info.

? And this 'fact' was reported in What NewsPaper ?
(Cuban Ballot Boxes with 100% Votes for Fidel Castro.)

> Kinda funny that Shrub's Brother was the Govenor of Fl.

Funny had nothing to do with it. The Good People of Florida Elected
Jeb Bush and many other Republicans. But then they also Elected Bob
Graham as US Senator. Its called a Free and Open Election and
Democracy.

> OR,that certain "types" of people "weren't allowed" to vote in Florida.

Its called the Law and Only Registared Voters can Vote Under the Law.

> OR,the confusing ballots...

A 'few' Confused People out of Millions do not make for a Confusing
Ballot. (The City of Chicago had more voting ERRORs the the Whole
State of Florida.)

The State of Florida, under Gov. Jeb Bush and the Republicans, has
improved Florida's State Wide Voting System.
(The City of Chicago, Under Mayor Daily and the Democrats, has done
nothing to correct Chicago's voting sysytem.)

NOTE: The Fact Is the Biggest Errors Occured in Democrat Controled
Counties in Florida. The Democrats Did It To Themselves, with not
Help from the Republicans.

> Brother was the Govenor of Fl
==========
Yes Im sure thousands of ballots were smuggled out of the state and dumped
into the ocean---- get real. Bush's brother is powerless when it comes to general
elections. General Election laws of every state are determined by each states
legislature, not the governor. And Fla.'s legislature is predominately Democrat.
==========

>
> OR,that certain "types" of people "weren't allowed" to vote in
> Florida.
==========
Yea like the thousands of illegals that flood into Fla. every year. Or the "deceased"
people that tried to vote. Or the people that tried, or did vote more than once. Or the
non registered people trying to vote. Or the thousands of military absentee ballots that
were thrown out for any reason the Dems could scrounge up, because they knew most
of them would be a vote for Bush?

==========

>
> OR,the confusing ballots...
==========
You mean the ones the Democrats designed and implemented??
==========
>
> OR.....
==========

In every recount Bush still came out ahead, OR the fact that with every recount more
and more cases of voter fraud turned up (see above remarks) which made the recounts
a moot point. It still boils down to, the electoral college elects presidents not the
popular
vote, end of story.

1020. Re: <><><><> One Final Note to You Bunch of Hunks <><><><>

Newsgroup: rec.radio.scanner
Date: 2003-05-23 20:51:49 UTC

In the state of Florida, which ended up holding all the power over the whole 2000 election, Bush got a total of 2,912,790 votes and Gore got a total of 2,912,253, a difference of 537 votes.
Now, it is possible for the electoral college in Florida to go against the tally in their state and
elect the other candidate if they see that the rest of the country has elected the other candidate,
but for some reason, they did not choose to do so. Which basically leaves the individuals on the
college squarely at fault and not the system.

popular
> vote, end of story.

JS,

More precisely:

First, the Electroial College Votes for the 'Election' of a President;
which they did for 'President Elect' GW Bush. (But that is not the
end of the Process.)

Second, the US Congress then Votes to 'Accept and Comfirm' the Vote of
the Electroial College; which they did for 'President Elect' GW Bush.
(Remember that at the time of this vote the US Congress was controlled
by the Democrats.)

The Truth Be Know.
- The Facts Speak for Themselves.
- - The Democrats 'Legally'
- - -Put GW Bush in office as President [.]

Therefore it is Clear.
- We Must Must Blame
- - The Democratic Party for GW Bush as
- - - The current President of the USA.

God Bless America ~ RHF

not only that, but in the news recently, the FCC plans on lifting the ownership caps of newspapers, radio stations, and tv stations complettely, so that ONLY ONE company can own EVERY newspaper, EVERY radio station, and EVERY tv station in the U.S.

that was in the newspaper.

and of course, that's a great way to eliminate diversity of opinion in the media, since once that comes to pass, Americans will only hear one opinion no matter which newspaper they reas or which radio station they listen to, or which tv station they watch, since they will all be owned by the same company.

also, with only one company owning ALL of the media outlets in the U.S., then the government or whoever (such asthe UN) can easily take control of the American media.

1032. Re: Little Rock AFB airshow Memorial Day weekend

Newsgroup: rec.radio.scanner
Date: 2003-05-24 03:48:00 UTC
From: Jim Mac Donald <jmacdon@mitre.org>
Message-ID: <3ECEEB70.E379C2DF@mitre.org>
Source record: 30762

Try this site <http://www.strongsignals.net/index.cgi> go to the
frequency board and down
the bottom are data bases for all over.
And this site has military comm's stuff
<http://www.grove-ent.com/SCANNERBOOKS.html>
" Monitoring The Military, State-by-State Edition"

Grove's Monitoring times has the demo team's frequencies:
<http://www.monitoringtimes.com/html/mtairshows.html>
For the local civilians try <http://www.cityfreq.com:81/ar/>
and look the air port stuff at <http://www.Airnav.com/>

One common air show frequency is 123.150.
Be prepared for a search of your personal belongings at
the security gate to
get onto the flight line, take another set of batteries if you plan to
listen all day. If you just
turn on the radios to listen to the demo teams them the charge on the
batteries should last
during the show. A pair of Walkman head phones or a ear phone for the
scanner, helps with all the noise at the show.
Have fun
Jim

Message-ID: <3ECEFD43.8090402@earthlink.net>
Source record: 30764

I just sat here for 5 hours and reloaded my info into the WinScan 210.
This is the third time I have reloaded it because I have learned a lot
over the last few months about how I want it setup.
I also have two programs saved for loading so I can change the load in
the BC 245 when I go south every few days.

Question, Why do I need the BC895 when the little BC 245 does
everything the big 895 does and cost less???
Is there something that the 895 does that the 245 doesn't??

Cool.
But what is a "discriminator tap"?

Anyway, I have both of them and I do enjoy them. I am going to write a
"trunked" setup as soon as I get time to use down south. There are two
trunked networks down there and one of them comes all the way up here in
the next county 10 miles away.

Note: All Combat Air Patrol callsigns/freqs, security-sensitive items, and active law enforcement information have been removed from this log before posting.

Thursday, 22 May 2003
Meteorological buffs might enjoy a trip to my website today.
I have uploaded some pics of acft during some wx changes here at Patrick AFB.

LIMA LIMA 13: P-3C, Jacksonville VP-30 "Pro's Nest" Sqdn
9:00am: Two touch-and-goes at Patrick; departs due to wx.
10:59am: ATC (135.075) has American AL flight attempt to raise LL 13 and direct him to switch to Sealord freq 120.95 or 267.5.
[133.75, 132.65; 135.075]

BERRY 540: SW-4 Swearingen Metroliner, Berry Aviation, Gov't Contractor.
9:33am: Departs Patrick to Palm Beach IAP during tremendous downpour here.
[133.75, 132.65, 132.25]

N21NG: LJ-35 LearJet, Northrop Grumman JSTARS Facility, Melbourne IAP.
9:30am: Departs Melbourne IAP.
1:45pm: E/r back to Melbourne IAP.
[118.2, 132.65, 124.8]

GUNFIGHTER 17: F-14D, Oceana VF-101 "Grim Reapers" Sqdn
10:01am: Area transition southbound; YL & OM comms.
[319.0, 353.6]
For several days, GUNFIGHTER F-14s and ROMAN F/A-18s, both from Oceana, have been transitioning to and from NAS-Key West.

NASA 901: T-38N #66-8381, NASA-Johnson Space Ctr, Houston TX.
10:05am: Lands NASA-KSC Shuttle Landing Facility.
1:30pm: Departs SLF to Ellington Field.
[128.55, 124.8, 133.475, 127.1, 126.525 (FL 390), 128.225, 133.9]
I could have held this guy for at least another handoff, and he was over on the FL west coast.

BOLT 02: KC-135R, MacDill 6AMW
10:31: To MacDill, routing via Lakeland. Announces inbound, wkg Lightning Ops.
[135.075, 119.825, 133.475; 311.0]

NASA 950: G-IISP: Gulfstream II, NASA-Johnson Space Ctr, Houston.
10:55am: Departs Cape Canaveral AFS. Thought I heard the tower read his clearance to McGuire; Mike heard clearance to Houston. Fellow monitors did not hear him arrive at either destination. On trips to Houston, I usually hold the acft comms all the way to the west coast, but lost this guy soon after handoff to Departure, but Mike's opinion seems logical.

[118.625]

LIFTER 31: C-17, Charleston AFB 437AW
11:15am: Touch-and-goes at Patrick; terminates because of electrical problem; considers IFE, but RTBs CHS instead (Orlando-J53-Craig-CHS). Gets 1600z CHS wx from Patrick Metro.
[133.75, 132.65, 124.8; 344.6]
Short stay in the pattern, but I got a nice shot of him with his nose in the clouds and tail in the clear.

GUNFIGHTER 01: F-14D, Oceana VF-101 "Grim Reapers" Sqdn.
11:15am: Area transition, e/r NAS-Key West, w lots of wx diversions.
[348.7, 319.0]

N1243E: Cessna Ce-208B #208B1005, US State Dept, Intl Narcotics Mission, Patrick AFB.
12:02pm: Departs Patrick.
[133.75]
This is one of several new additions to the DOS acft at Patrick.

LIFTER 35: C-17, Charleston AFB 437AW
1:28pm: Works the pattern at Patrick for about an hour and a half.
2:55pm: Departs to Charleston; had to fight for the nice direct Orlando-J53-Craig-CHS routing.
[133.75, 132.75, 124.8]
Lifter 35 game me the photo of the day. It will be up on my website by the time you read this. Putting up a shot of Lifter 31 trying to pierce the clouds, so you can compare the conditions. Quite a difference huh?

JOSA 672: C-21A LearJet.
1:51pm: Landing at Cape Canaveral AFS Skid Strip; rqsts fuel.
[124.8, 118.625]

FLIGHT CHECK 98: C-29A (Hawker 125), SAF/FAA Facility Check Sqdn
1:51pm: Area transition.
[133.9]
Heard this chap Lima Charlie when he was over Sarasota, per his comms.

MAKO 11: F-16 Flight, Homestead ARB AFRC 482FW
2:00pm: HARBs, high- and low-dive bombing at Avon Park Bombing Range and Placid MOA.
[307.1, 292.2, 285.725, 138.125]

AKULA 31: F-16 Flight, Homestead ARB AFRC 482FW
2:25pm: Entering Avon Park Bombing Range; reports hearing ELT.
[301.7, 138.125]

SHARK 21: F-16 Flight of 4, Homestead ARB AFRC 482FW
2:29pm: Working Avon Park Bombing Range. 3:00pm: "Tanks dry; will RTB."
3:13pm: Departing Range, passes Maintenance info to Mr Mako ("23 is Code 2 for secure voice.").
[307.1, 292.2, 285.725, 138.025, 138.125, 303.15]

LN 453: P-3C, NAS Jacksonville VP-45 "Pelicans" Sqdn
2:52pm: Area transition.

hey dan
i do believe thats what it was called, i think they had a 8001 and a 9001?
from what i found on google,
i'm looking for something along that line as long as it converts the area
i'm interested in....i dont have the funds to get an import and didnt know
they were available (import models) when i got my 780xlt...are you looking
to part with it?

1040. Scantena vs. Discone: Some Thoughts On

Newsgroup: rec.radio.scanner
Date: 2003-05-24 13:33:53 UTC
From: Robert11 <rgsrose@tiac.net>
Message-ID: <bansbo$s6j$1@slb1.atl.mindspring.net>
Source record: 30771

Hello:

The Scantenna ST2 seems to be a most popular antenna, and item for discussion.
So, let me add a bit.

I have recently bought a Scantenna ST2 in hopes of replacing my R/S Discone, which, while it does a decent job, leaves a bit to be desired.

Have been making a somewhat unscientific comparison between the discone, and the Scantenna, both mounted in my attic.

I am using identical lengths and type of coax down to my receiver. Comparisons were made by simply switching receiver inputs, and monitoring S meter deflections, as well as subjective listening.

To be accurate, should note that both coax's are 50 ohm, as is the discone and receiver, while the Scantena has a 75 ohm output.
For my listening-only, I doubt that this is a problem, but. ?

First, the scantenna is sold as having a quoted range of 30 MHz - 1.3 Ghz.
The box also has on it that it is apparently optimized for:

30 - 50
148 - 174
450 - 470
470 - 512
800 - 912

I agree with all the posters who feel that the Scantenna is "generally" superior.

However, it seems to me that it is superior Only in the mentioned ranges that they say it is optimized for.

The R/S Discone outperforms, substantially, the Scantenna in the commercial aviation bands, e.g. 110 to approx 135.

This seems to be the case for airborne planes, as well as for ATIS and control tower communication I can hear from an airport about 10 miles away.

I was somewhat surprised that the Discone does better for receiving the airport tower.

Have tried with the Scantenna horiz. support mast grounded, as well as un-grounded, and
have noticed no difference. I also tried attenuating the signals, to be sure there is no receiver overload.

Has anyone else noticed that the Scantenna seems poorer relative to a Discone on the
commercial aviation bands, both for tower and airborne ?

Would be most interested in anyone's comments.

Bob

As you may already know I ONLY use my ScanTenna for freqs not listed on the box. These would be 108-136, 138-144, and 225-400 MHz. In every case it has greatly outperformed any discone I've had and RadioShack was one of those discones. I also had the overprised Diamond discone ($100+).

One thing I noticed in your test that bothers me. You said "Scantenna horiz." Do you mean you mounted the Scantenna horizonally? The ScanTenna is ment to be mounted vertically. That might be the source of your problem.

On my ScanTenna I can pickup the ground side of tower comms at an airport about 30 miles away. Also i can pickup any aircraft on the ground at our local airport about 3 miles away (Daytona Beach Int.) regardless of where they are on the field. With my Discone sometimes aircraft on the ground at Daytona are a bit "fuzzy" where the ScanTenna is "full scale" crystal clear.

Do a google for "CARA Enterprises Inc" -

This crazy company shows up in all kinds of frequency lists. It shows up a zillion times with a zillion frequencies. But can you find out what or where this comanpany really is?

Nooooo.

It's a big fat mystery.

What the hell is going on here?

I believe this is a food catering service at Pearson Airport in Toronto.
They also own and run the Harveys and Swiss Chalet food outlets. They have a
ton of frequencies no doubt for use in running all their supply trucks full
of food to all the carriers at Pearson.

I am enjoying the program more everyday, it just takes a lot of work to learn how to use it then do it right or you lose everything or mess it up so bad you can't use it.

I hope to learn to write trunked setups soon so I can load then as I travel around So. California. I could load files with my laptop while in the car and if I wanted I could watch it run while driving (and you'll think cell phones are bad).

I think he was talking about _just_ the mount. Anyway, there are
apparently two differenct RS discones, from what I've read. Most of the
criticisms I've seen also refer to it as both flimsy and poorly built - mine
is quite sturdy, solid and well-constructed.

Many antennas will excel in one area and not in others. No antenna is
perfect, and electronics and commo usually involves compromises.

>This seems to be the case for airborne planes, as well as for ATIS and
>control tower communication I can hear from an airport about 10 miles away.

The better performance with airborne planes *may* be due to the
patterns of the respective antennas.

We are heavy users of discones commercially, but I have no idea what a
Scantenna is.

A discone is unity gain and omnidirectional. Its pattern looks like a
beach ball on a meat skewer.

The other antenna *may* (I don't know its characteristics) try to get
some gain and better performance by designing its pattern to be more
like a bagel on a skewer, or if high gain, like a dinner plate.

This makes it hear better towards the horizon, but lesser up in the
air, if that makes any sense. Omnidirectional unity gain antennas see
as well up into space as they do out to the horizon, theoretically.

So if you are copying aircraft comms better on the discone, it *could*
be because the discone is hearing better up in the air than the
Scantenna. For most terrestrial stations, a flatter pattern generally
is preferred.

This is an oversimplified explanation with poor analogies, but maybe
it will help clarify things.

There is a white paper on our website about antenna patterns, gain,
etc. written for nontechnical law enforcement types which may be of
interest. Look under White Papers, then for the antenna article

My compliments on your tests and excellent documentation of the
results. Your efforts mean a lot more than a thousand 'opinions'
from people who just repeat what they read elsewhere.

1051. problems using BC250D scanner

Newsgroup: rec.radio.scanner
Date: 2003-05-24 18:56:39 UTC
From: Marta and Larry Brookhart <lbrookha@erols.com>
Message-ID: <baof57$kp8$1@bob.news.rcn.net>
Source record: 30781

I recently put in the digital card for the bc250d and now I am having problems using the scanner. Here is a list of things that are going on:

1)I entered all the frequencies for a digital trunked system and entered one talkgroup ID with a label. I am now picking up every frequency including the control channels that were programmed. When the scannner stops on the control channel, it shows the talkgroup id and label id. I also am hearing the buzzing sound that is common on control channels.

2) The scanner is now scanning both conventional and trunked even if I go to the menu option and tell it to scan conventional channels.

3) I am not hearing the keypad beep after each key is pressed. I like having that on so that I can be sure the scanner is working properly. I didn't turn it off, but I don't hear it anymore.

4) After programming the trunked system, I went back and put in a new frequency and gave it an alpha tag. When this frequency becomes active, the scanner is not displaying the alpha tag. All it shows is the channel number, bank number, frequency, and signal strength.

5) I am finding it difficult to get to the menu option where I can add new frequencies.

Can anyone help me with these 5 issues?

we did not lay Hitlers ass to rest

there is still many world leaders like him look at Blair and Bush Hitlerites
through and through

well done Stagger for trying to make some americans think instead of
believing the spoon fed shit they normally digest.

thanks to blair and bush terrorism as expected has got worse,and we are
still not adressing the palestinian problem.

first of all chuck out all Israeli settlers they have no right to be there.

as there are more terrorists out there if reading this any american is a legitimate target,especially if military or government.

so a nice big bomb at the US embassy in London is a good target to go for,if not bomb a few hotels full of americans,but please try and leave use brits alone,we are not responsible for demented Blair.

most brits were opposed to the recent Iraq action and most still are.

oh what have i said,a certain saddo is probably on the phone to the US embassy in London now,as he did before,not that anyone contacted me about it,if they did what on earth is wrong with me exercising my democratic rights.

have the US ever heard of democracy,no i dont think so

us democracy sorry for no capitals but us is a piss country and does not deserve capitals.

you think democracy is voting in rich right wing murderers and having a military machine that opresses those who are against them.

I do not know if this will help you, but here in Canada, CARA, is a
food catering company. As well, in an unrelated matter, C.A.R.A.,
stands for Calgary Amateur Radio Association.

i would of thought the medication would of been more suitable for the guy
who phoned the US Embassy in london

mental or what,internet you are allowed to say what you want,when you
want,you dont have to agree,but you can say it

freedom of speech americans say,but as soon as someoene exercises this right
you tell him he cant say it.

Again, George, you seem to use your postings for self-aggrandizement, instead of information.
The man clearly said "Have tried with the Scantenna horiz. support mast grounded, as well as un-grounded. . ." He is grounding the horizontal mast that comes with the Scantenna. You choose to take two words out of his statement, "Scantenna horiz" to make the man seem like a fool. He is clearly not mounting the Scantenna horizontally, only grounding the horizontal mast. You belittle the man.

Don't worry Burr, Allan just has it in for me. He enjoys jumping on me every chance he gets. If he can't find anything to jump on me about he'll just make it up like the "impressive" list of antennas he use to publish up until I pointed out that they really didn't exist.

Actually the first time Allan and I ran into to it was when I asked a question about a 2 meter ham freq used for local Shuttle xmissions. Simple honest question. I even offered Allen an update to his list but nearly 2 years later he still has outdated info on his website and refuses to add replace the one I pointed out with the real one.

I don't know about Allan but I sure have received some interesting emails from others who agree with me that Allan is a bit "strange".

Since he's been warned on one of Florida's largest email lists to knock it off he now comes here to be-little me.

Ok well, Allan is a very important person in his own mind.

the fact is your voting system is crap,for a start you need to be a millionaire to get anywhere in the UK you can be in politics no matter what your background or social status in the US you have the class system,you dont count unless you have money and status.

wow what a crap form of democracy,never mind maybe the UK/FRANCE/GERMANY and other european countries can go for a regime change in the US

also we know at least we will actually find WMD unlike Iraq,we also have a lot more record of the atrocities and use of such weopons by the US than we have on Iraq.

i see you bullied other countries in to giving US/UK support for your imperialism of IRAQ.

you are incapable of doing anything honestly

look at all the crap fed during the war,that Jessica story,this was real war not a film.

and we will never forgive the US for the friendly fire,i cant understand why some of your military are not facing court marshall.

hopefully we will abandon NATO and form a european miltary force with our rightful friends in germany and france.

And Allan Stern is just a grumpy old man who doesn't give
acknowledgements to his sources.

To place infomation on a website with or without acknowledgments is not
pretending to have originated them. And Allan, you are once again
wrong. There are acknowledgments on my site. In fact there are more
acknowledgments on my site then I've seen on yours!

However your site still has frequencies which are more than 2 years out
of date. You've been told about them, and infact been given updated
frequencies but you have yet to update.

George
http://www.MilAirComms.com <- AllanSterns Most Hated Website cause its

George:
You questioning my credibility is hilarious. Here's the Sig you used to run until folks laughed in your face:

> "George
> http://www.Licensed4Fun.com
> I make Over $5000 per Week on eBay!"

When you first questioned the truthfulness of my antenna listing, here's the posting I made (rec.radio.scanner - 31 July 2002) , which you ignored:

> If you make that $250,000 a year (yeah, right), bet me a thousand that I don't
> have the listed antennas here. Put up or shut up you fraud.

I make the same offer today, except I'll increase the bet to $5000, even $10,000. This is a public offer. The list is public too but here it is again. Will you accept my offer?

AL STERN Satellite Beach FL using
SCANNERS: Three Pro2042s, three Pro2035s, seven Pro2045s, one Pro2036, one Pro2040, two Pro2048s, one Pro2049, two Pro2050s, four Pro2006s, one Pro2005, one Pro2004, one Pro2003, two Pro2002s, three Pro2009s, two Pro2032s, two Pro2022s, two Pro2021s, one Pro2026s, one Pro2023, one Pro2024, one Pro2027, one Pro508, one Pro55, one Pro57. Two BC780s, one BC800XLT, one BC760, one BC590XLT, two BC-250s, three BC210XLTs, two BC350As, one BC450A, one BC700A, two BCT-7s, one BC-310A, one BC-155, one BC-175XL, one BC-178XL, one Fox BMP 10/60.
HANDHELDS: One Sony ICF-SC1, one BC2500XLT, four BC200XLTs, three Pro43s, two Pro26s, one Pro60, one Pro62, one Pro64, one Pro90, one Pro46, one Pro28, three Pro39s, two Pro34s, one SC150 Sportcat and more.
ANTENNAS: About three dozen, including NilJon HD WB Omni, two Max Systems Ground Planes (cut to 225MHz), Scantennas, Grove Beams, Discones, Radio Shack 20-042 Omnis (like Scantennas), two Informant mag-mount whips, Larsen PO 150 whip, Cushcraft Commercial grade FM beam, etc, many on my 45-foot Rohn tower; and Radio Shack center-loaded whips and Bearcat AT002 window-mount antennas for handhelds. Also ample use of in-line amplifiers.
HF GEAR: One Icom R75, three DX-394s, three DX-390s, two DX-398s, one DX-440, one Yaesu FRG-7, one SW-100, MFJ-1020A Active Antenna, H-800 Skymatch LF/MF/HF Active Antenna, Super Vak-Tenna Active Antenna, many indoor/outdoor wires.

You bitch and complain about acknowlegements. Where is yours? Example, where did "147.1500: HAM Rptr-Daytona, Re-xmssn of NASA" come from? Let see I know that its not rebroacast shuttle xmissions for LONGER than the existance of your website. So I know for a fact you didn't monitor it. So where did you get it? Come on, how about the acknowlegements which you keep harping I don't have.

Look who's calling the kettle black.

In your old eyes anyone who doesn't spend 24 days in front of their radio is a newbie. Some of us like to enjoy the hobby without have having to do endless scanning and searching. We have families, jobs, and lives outside of the house. To you unless you have a your nose up a a radio 24/7 we're just dog meat. I know at least 4 (not including me) local people who have tried to get you to help them and you've either turned your nose up at them or flat out read them the riot act. Then you have the nerve to tell people who I try to help that the information I have isn't valid. Hell one newbie I know of quite the hobby because of your ingorate comments and went back to just having one scanner for local police, heck that person can almost see the top of your one antenna from his house on Tortoise Way. Its a shame that you are more helpful and were less hurtful. You're done more to reduce the number of MilAir monitors in our area than anything.

How about my other websites, don't forget http://www.AuctionWholesaler.com.

It doesn't matter how much I make, that has nothing to do with radios or scanning. But I will say, I've seen your house, I've seen your antennas, and you may have the antennas you list however you don't have them up!

I will also say that I have never posted a dollar number on the internet of which I couldn't prove to the Pennsylvnia and Florida State Attoney Generals office or the IRS.

It's not like we have a lot of diversity of opinion now. While there are restrictions on ownerships at the moment, this has been greatly weakened over the last few years, loopholes are plentiful, and there are few restrictions on lesser investments in other companies.

Further, few television stations or newspapers have extensive reporting staffs today - most news comes from the very few news suppliers (AP, UPI, and so on). In addition, because of financial concerns (advertising revenue), very few television stations or newspapers today are even willing to consider investigative reporting.

Instead, we get safe stories filled with worthless information, political correctness, and popular opinion. The only exceptions are, of course, news stories complying with the agenda of the ownership.

Finally, when seeking to insure diversity of opinion, one also has to consider the backgrounds of the owners in addition to the shear numbers of owners. A group agenda, easier to conceal, can be even a greater threat than a limited number of owners.

The MilAirComms.com Log report for 5/24/2003
All times are Eastern Time, frequencies in MHz and
unless other wise noted modulation type is AM.

Note: All CIA Comms and comms decoded with the
SuperSecret Captain Crunch Decoder ring have been
removed from this log before posting.

Was a light day for my monitoring. With holiday activities
I didn't get a chance to sit infront of the radios
as much as normal (I do have friends). However there
are some of what was active in the Central Florida area.

unid
Time: 0849 talking about weather, sounds more like air-air than
talking with Pinecasle
Frequency: 357.0000 (Pinecastle Rng)

ROMAN 1
Time: 0850
Frequency: 348.7000 (Miami Cntr - Melbourne area)

?? 11
Time: 0932 wants to tour KSC after TACAN approach 20 at Patrick
Frequency: 281.4250 (Daytona App. - Patrick area)

GUNFIGHER 31
Time: 0934 direct Atlanta
Frequency: 291.7000 (JAX Cntr - Gainesville Area)

Stuck mike!
Time: 1508 Controler giving shft change states to supervisor during
stuck mike. Very interesting comms relating to security issues,
traffic count, and number of "suits on duty".

Source record: 30706

Hi, I have a Merit Pit Boss bartop/tabletop video game in excellent physical condition and 100% working order. Some of the following games in it that can be played are - Joker Poker, Sex trivia, Bonus Blackjack, Roll Them Bones (Dice Game), Off To The Races (Horse Race Game), Super Phrase Craze, Tic Tac Trivia, Four Score (puzzle Game), Super Trivia and Super Stud Poker. If interested I can provide pictures. This is not a route machine, I've had it in our rec. room for the last 4 years. I'm interested in a good condition fully working scanner, something like a BC895, PRO 2005 or a PRO 2022, I would consider others. The only catch is, the Pit Boss Game will have to be picked up here in southern Indiana, near Bloomington. The Pit Boss Game has provided us and our guests many hours of enjoyment. Thanks for reading - Regards - Harold 73's

From: av8tor@milaircomms.com (GeorgeF)
To: allanstern@aol.com

I can without question in court prove my $5000/wk statement and a hell of a lot more. Stop and think about it for a second. Don't you think I've already had to prove my income many times as there are many non believers. I've worked exclusively on the internet since 1999, worked for myself, filed taxes and have created an excellent paper trail to verify and prove my income.

Keep up the lies and insinuating that I do not make what I stated I will file a civil suit for defamation. You can take that to the bank.

I have yet to start in on you until after you've posted insulting and uncalled for comments on email lists or newsgroups. If this doesn't stop and the lies about my income you will very soon find out that I make enough to see you inside a court room on a civil law suit. I really don't care how deep your pockets are, probably not deep enough for a law suit to be worth it monetarily wise but at least it might put a stop to your uncalled for bickering

George

DJ,

Hello, Lets Not Make Up the Rules as we go along.

Each State (icluding Florida) have "Slates of Electors" that are
'Pledged' to Vote for a Specific Candidate. Some States require by
Law that 'Pledged' Electors Vote as they were 'Selected' by the
Voters; others simple leave it to the 'personal honor' of the Electors

The Electorial College does not exist in any State per say. The
Electorial College only exists when it meets in Washington DC to Vote
after the Election.

The REASON that the Florida State 'Electors' (or any others) did not
change their Votes is: They Knew the Law -and- They were Persons of
Honor [.]

The Electroial College Votes for the 'Election' of a President; which
they did for 'President Elect' GW Bush. Then the US Congress then
Votes to 'Accept and Comfirm' the Vote of the Electroial College;
which they did for 'President Elect' GW Bush. Please 'remember' that
at the time of this vote the US Congress was controlled by the
Democrats.

The Truth Be Know. The Facts Speak for Themselves. The Democrats
'Legally'
put GW Bush in office as President [.]

Therefore it is Clear. We Must Must Blame the Democratic Party for GW
Bush as
the current President of the USA.

God Bless America ~ RHF

>
> I just looked at your site, checked about a dozen listings from all over the east coast.
> I saw NO indication that anyone BUT you had gathered that info.

www.milaircomms.com/artcc_frequencies.html lists the source for the 20
pages below it.

www.milaircomms.com/uhf_cap.html lists a source, other contributors have
requested to NOT be listed for various reasons.

Over 90% of the frequencies list came from US Gov't Docs which are
avialble to the general public.

ALL Audio files on my site except for one I actually did receive at my
location. And the one file I did not personally record proper credit
was given.

Now I've seen AllanStern list many freqs for areas which he is not
within receiption distance but never gives his sources or credit. Below
I've pasted one of Allans posts containing freqs for the Virgina area.
Now am I to believe Allan received all these freqs on his scanner in
Florida? I don't thing so....But he didn't give any credit to his
source but yet I'm expected to credit every freq I list? I've also
seen lists of Commerical Airline freqs as well as VHF ATC freqs Allan
has listed. Granted he has received many of these on his scanner, but
did he start searching between 118-136 MHz? I don't think so, I'm sure
just like everyone else he got them from FLIP documents or Sectional
Charts, but did he give credit? NO. But I'm expected to and hell, I've
used the same sources!

I smell a "double standard" in the AllanStern department.

This will be the last post I make regarding this discussion as it has
nothing to do with scanning but simply ads to the polictical bullshit.
If Allan wants to condem me than so be it. I'm very surprised at how
many others are starting to see the light regarding Allan.

Actually, I worked for Cara for 7 yrs in Ottawa. It's an airline catering company. They own Harvey's and Swiss chalet. They load galleys on airlines at all the major airports in Canada.

If that's who you mean.

>Now I've seen AllanStern list many freqs for areas which he is not
>within receiption distance but never gives his sources or credit.

But George, you said I don't help people, that I don't furnish freqs. Can't have it both ways George.

>I've pasted one of Allans posts containing freqs for the Virgina area.
>Now am I to believe Allan received all these freqs on his scanner in
>Florida?

Hell, George, those came from public domain US Government pubs.

>seen lists of Commerical Airline freqs as well as VHF ATC freqs Allan
>has listed. Granted he has received many of these on his scanner, but
>did he start searching between 118-136 MHz?

Actually I did exactly that. A couple of years ago, several of us in the Melbourne-Vero Beach area decided to accumulate the freqs used by airlines in this area. I took the advice I give most newbies like you, USE YOUR SCANNER's SEARCH FUNCTION. But I still provide the freqs to people. Spend hours doing it all day, as you say.
Also I post an updated Airlines Company Freq list regularly, so it is on many websites You have given me a great idea tho; maybe I should put it up on my site.

Anyhow, as your quote of my posting shows, I am certainly not as covetous of my freqs as you have previously suggested. The list of Giantkiller freqs was also followed by a list of common USAF freqs. Ya know George if you keep quoting the stuff I furnish on Email Groups, your gonna make me seem like not such a bad guy after all. Be careful now.

The BC 895 can be "on" 24 hours a day, 7 days a week. It will never need a replacement battery, and it will do 220 Mhz to 406 Mhz AM military air band! And the BC 895 has tone coded squelch, well be it that it won't cover the digital tone codes, this is a nice feature!
Jim

Come on George, I can think of a recent time when I posted to RRS about a certain matter, you almost immediately posted to the MilCom list without proper attribution. That wasn't the first time here I'd done that, and you had it 'appears' to have lifted that info without attribution.

And after I was watching your posts for a while, and while looking at other sources I began to see some of the same pattern. Not to hard to do if one is paying attention.

It's my 'opinion' that you've been doing this for some time.

Actually what I post to MilComm are comms I've heard. You've only got
that opinion from listing to Allan's lies.

As he has admited, it does the very same thing I do. He uses the very
same methods of getting frequencies as I do. And he gives less credit
than I do.

Allan, watch your blood pressure.

George's listing as he has stated also came from US Government docs.
Both you and he have used the same sources. So what's your problem?
You list frequencies from the Government Pubs without stating your
source. George lists frequencies from the Government Pub without
stating his source. I don't see the difference other than you have
some other agenda.

Roger

Well with 37 people in the local scanner/ham club WinJunk780 only ran on one computer for a total of maybe 1min 30sec before locking up and dieing. And if it's so great why is there no street address or phone number at the Pozilla web-site?? Why can't anyone find anything on Pozilla anywhere in AZ?? Real simple, they are doing there best to hide from the folks that made the mistake of buying the junk.. I'm glad it works for you and *me* but it did not work for anyone in the local scanner/ham club and from the e-mail we get daily it didn't work for several thousand other folks ether.

And 15 scanners?? I have a life, i.e. I don't need to listen to everybody eles life on the scanner. But when I do have it on I want the $70.00 software I bought to work. Just like the kids in the local club.. The paper boy worked 2 1/2 months to buy a scanner and 3 weeks to buy WinJunk780 The Uniden BC780XLT works just fine with ARC780 and TrunkStar780 heck it even works with the $14.95 ScanPro780, His computer runs them all. Install WinJunk780 lockup Ctrl Alt Delete.

So if me telling the world that it's crap, junk, shit, don't buy makes you so mad you have to respond to me thanking the folks that wrote in with there horror story's you really need to get a life... but I'm happy it works for you..

The WinScan780 Horror

Thanks Jim,
Some nice points I didn't think about. Maybe as time goes by I'll get
another 895 for trunking. I'm about ready to get after this trunking
stuff for the little I can receive trunking here at home and then have
programs for when I go south.

Morning Other George,
I understand your point and reason. Now if I can say a few things that may help.

My references are with WinScan 2.10 for the BC895&245 and they are both running "very well".
I also was very unhappy with WinScan for the first few months until I forced myself to sit down and learn to write to it. I spent 16 hours learning how to write to it and I got mad every time I messed it up but I learned something each time I had to start over or rewrite a few things. Now I understand how to talk to the program and it talks to me. I met a guy on the other side of the mountain from me and we exchanged WinScan files and we ran each others files just fine. I have two very nice files wrote now, one for home on the 895 & the 245 when I'm home and the other for the road on the 245. It takes two minutes to change the loaded file in either radio and I'm very happy with the program.
In reference to not being able to locate Pozilla, they have moved to the Boston Area I think someplace in that area. I told you that a few months ago also they came up on the list and offered to work with anyone having problems with there software, Uniden had changed some their program so some people were having problems.
I think Pozilla is a very small company as is a lot of software writers but they are responding to the cries for help. Many people just pick up the software and go with it as many have said on the list in the past and as I have personally found out the last few weeks as I have now go my personal program working right.

If I can offer any help as a fellow Scanner (beginner) please ask and I'll do what I can can.

Best Wishes,

Burr

1098. Scantenna ST2: Anyone Have Any Gain Plots/Graphs For ?

Hi,

Might anyone have any Vertical & Horiz gain plots/graphs for the Scantenna ST2.

Or, any info. on what it "might" look like ?

Also, actual numbers for gain vs orientation ?

Tried mfg., but no luck.

Bob

>and lives outside of the house. To you unless you have a your nose up a
>a radio 24/7 we're just dog meat.

Where do you get this stuff? I don't think that, have never thought that. I think you are a newbie; that is all I said. A posting from you on Milcom is typically a list a half-dozen Mil-UHF freqs you've heard. Maybe once a week you can ID a callsign and the acft base if it is something common like a FANG or GUNFIGHTER. That is a newbie post. Nothing to be ashamed of, but a newbie post just the same.
And because I post 20 or 30 Mil Acft on my daily postings, you claim (in your recent Email campaign to folks) that I make up my postings. Yeah, right. I have no antennas, no scanners, I just sit here and make up postings.
If you cannot spend more time monitoring the Mil that is fine, but don't put me down for spending all the time I do at it.
While spending a good percentage of every day monitoring, I am at the same time IMing with other Mil monitors all over the world, and that means that there are other retired person's like myself who spend a very high percentage of our time monitoring. That does not mean we disrespect those who do not monitor as much as we do. Each to his own. You choose to make $5000 per week on Ebay according to your Sig Line (ya right), so you haven't the time to monitor I guess. I'm just a poor old country boy, unable to afford $20, $50, $100 antenna, so I lie about having them. I'm just a poor old country boy who sits here all day inventing callsigns, freqs, sqdn designations, tail numbers, etc. Maybe I'll have toI write a few more Monitoring articles and get a few bucks together and if there's anything left after I buy food for The Butcher, I might be able to buy myself an antenna or two. I do pay my taxes on the pittance I have tho; I wouldn't want anyone to collect a reward from the IRS for reporting me.
Frankly I wish you spent more time monitoring, so you'd have less time to conjure up all these falsehoods about me and about yourself, Idiot.

Cross-posted to: rec.radio.swap,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc

Do you have a need for a high-quality SMA-to-BNC antenna adapter that
is custom made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base, mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
antenna change.

Sizes to fit radio models:
Yaesu: VX-5R, VX-7R, VX-1R, FT-50-R, VX-10, VX-150, VX-110,
VXA-100, VXA-120
Icom: IC-T90A, IC-T8A, IC-T81A, IC-Q7A, IC-R2, IC-R5
Kenwood: TH-D7, TH-G71, TH-F6A, TH-F7A
Alinco: DJ-V5, DJ-X3, DJ-S40
Standard: C508A, C510A
Radio Shack: HTX-420, HTX-400, HTX-245, HTX-200
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000
Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)

Thanks for the reply. I liked the features of the ShareCom WRP-500.
Vendors claim to have sold many, but I have yet to hear from someone who
bought one and uses it. Given the length of time the item has been on
the market (before the current supplier problem), it's odd that I can
find no report on a newsgroup from an owner-user.

Just curious, has anyone found a S.A.M.E. equipped radio that will monitor more than one weather frequency at the same time? I live in an area where 'my' weather data comes from one NWS tower, while the data for those counties neighboring and southwest of me (the path of approaching weather) are broadcast on a different frequency. I suppose the simplest approach is to pick up another radio, but the wife has just about had it with the bells, whistles, and beeps created now. (fire pager, ham radio, weather, etc). I suppose it would have to scan, or dual watch just wondering if anyone has stumbled across one. Thanks in advance

This isn't in clarification, but concerns weather radios. I was recently in Ohio, near the Pennsylvania border, and on the shore of lake Erie. The best weather signal came from Cleveland, next best from the city of Erie. I locked the radio on the Cleveland frequency, but for the most part all of the warnings that occurred were for the Erie Pennsylvania area. The second day that we were there, warnings were finally being issued that concerned the area in which we were and for Cleveland as well.

The Reecom that I have will hold various SAME codes, as will my Uniden 785D. I would have thought that the warnings were broadcast from all towers that could conceivably enter into an area, and this would be quite easy concerning the activation of the receivers, kind of like beeper activation signals being issued from a plethora of towers in the hope of connecting with the beeper. BUT, it seems that the verbal warnings issued after the activation concern the areas nearer the activating tower.

Is this essentially true?

1118. Scancat-Gold Surveillance Enhanced Comments?

Newsgroup: rec.radio.scanner
Date: 2003-05-26 03:01:01 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3ED1836D.2020503@licensed4fun.com>
Source record: 30648

Does anyone use the Surveillance Enhanced version of the ScanCat software? I really don't care for "computer controlled" and I have my own software for programming my scanners (directly from my own database).

But I"m more interested in the logging and recording features of the Surveillance version of ScanCat.

Any comments would be greatly appricated.

George

You're a confused old man. Please review those posts and you'll see
that we finally discovered who's house it was. As per your comments it
was proven it wasn't mine.

Back to Scanning.

From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3ED185FA.1080307@licensed4fun.com>
Source record: 30650

The MilAirComms.com Log report for 5/25/2003
All times are Eastern Time, frequencies in MHz and
unless other wise noted modulation type is AM.

Note: All CIA Comms and comms decoded with the
SuperSecret Captain Crunch Decoder ring have been
removed from this log before posting.

unid
Time: 1018 beam pointed wrong direction, missed call.
Frequency: 265.4000 (NORAD - CAP)

CG 1717 (C-130 Clearwater)
Time: 1244 requesting that Cutter Confidence come up on Company
Uniform in the Green.
Frequency: 5.696 USB (USCG)

?? 22 (E-6 confirmed)
Time: 1316 picking up passanger at hanger 3
Frequency: 311.0000 (MacDill Lighting Ops)

69SK
Time: 1418 HAMMER tells 69SK to contact MIA Center on 127.220
however I don't have 127.220 listed at a ZMA freq. 69SK did attempt to
contact ZMA on 127.22 but no joy. At 1430 cleared below 24 N. Lat. At
1438 69SK was informed to 10-22 (disregard) missing aircraft and
Frequency: 282.4250 (US Customs); 127.2250

unid
Time: 1426 complaining about not getting a Victor Freq
Frequency: 276.4000 (NAS JAX GCAl)

CG 1717 (C-130 Clearwater)
Time: 1444 calling Group Miami; Pos 23-04N 77-34W (about midway
between the Bahamas and Cuba) inroute Clearwater, FL
Frequency: 8.983 USB (USCG)

EAGLE 61
Time: 1640 Wants the Tour of KSC.
Frequency: 307.2500 (JAX Cntr)

REACH 0001
Time: 1722 Landing Patrick Condtion A1, need crew bus for 9.; 1732,
initial twr call, landing RWY 20
Frequency: 383.0000 (Patrick Command Post); 138.3000 (also Command
Post?); 133.7500 (Patrick Twr)

Coast Guard Ponce Inlet
Time: 1759 Broadcast of capsized boat 1 mile off SunGlow Pier, 2 POB's in water. (Sunglow Pier is just south of Daytona Beach, FL); 1604 USCG reports vessel has been re-righted.
Frequency: 156.8000 FM (Marine CH 16); 157.1500 (Marine CH 23A)

69SK
Time: 2011 Informing JACK KNIFE they're 140 miles out.
Frequency: 282.4250 (US Customs); 355.8000 (NAS JAX Tower)

One thing for sure George, as soon as someone calls you on something, you resort to making numerous logging posts, as if to make up for your shortcomings... proven fact!

Damn funny, if I say so myself...

Ya know, I own it and I don't use it!
I bought it for my bc780 and then found ARC780 by Butel and have not used ScanCat since! That is a lie however because I have used it for my Yaesu frg-8800 adn my icom IC-725 rig. As far as controlling my radios, I only need to do the bc780 as I don't use the others and arc780 does wonders for the 780!

The SE version does work and I have used it but to answer your question, no, I don't use it! Maybe if I had more time I may as it does work.

Ralph

I for the ost part agree with your statement. I do however have the pro-93 and of course the 2004 and 2006 models. In testing, I have seen the 2004 desens itself in the 150 mhz range while the 2006 did not. In the lower ranges like 30 and the higher ranges like 450 I can't say that I experienced any desens at all. I regularly run an outdoor antenna and the only range affected ever was vhf-hi (146-174). Of course this is my favorite range! I now live in an area with no strong xmitters so I can leave all wide open and it works great!

Hey George,

Logging Unattended Freq's is done reasonably well in SE, I don't enjoy Computer Scanning sw if the radio is cabable on it's own. However having said this ScanCat SE is very capable in one area that helps my enjoyment of the hobby a great deal.
That is the abillity to take an asci file or DB frequency list and just Scan it!!! No need to load the silly scanner or HF rig with the frequencies Just to see.. Simply load the file and Scan Cat RIPS through it!!! Simply Amazing.
Record the hits and reduce the list to active ones in yoru area.. IMHO Scancat is worth the the price just for this option, In fact it's about all I use in Scan Cat.
I don't know of any other scanning SW that does this as well, completely or easily.

I enjoy the Search module in ARC780 by Butel (Great Idea and effective with GREAT Stats, It however lacks selectable options such as Squelch and voice scan options!.) This is the best computer SEARCH + STAT utillity I have used, Next to my VADER and CE232.

Regards

Dom

ATCs commnly pass only the first two decimal places in VHF freq handoffs, especially for .575, .225 and .175 freqs These become .57, .22, and .17. On UHF, they will almost always pass the three digits, like 269.375, or 281.425.

I have all 7 counties near me entered into my radion shack S.A.M.E
equipped weather radio. If I tune to one tower, I'll get activations
only for those covered by 'that' area. If I tune to the other tower, I
get those only covered by 'that' area. There isnt a crossover here at
least. For now, I tend to go with those counties in the path of my
incoming weather, rather than the county I live in. Being an active
spotter, it's best to get the heads up that way anyways. Would just be
nice to see if someone had found a radio that could monitor more than
one frequency but at the cost of them now, it's just as easy to purchase
another.

Does anyone know of any Northern/Central California public safety agencies using the digital technology yet? I have a BC785 with the digital card, but I don't know of any agencies using digital up here. I heard a rumor that Marin County was due to go digital, but never heard anything concrete. Can anyone help? Thanks!

>Post?); 133.7500 (Patrick Twr)

This was actually REACH 6001, as correctly posted by a scanner who had him over Georgia. Approaching Patrick, a couple of times he used 0001, true; but he corrected later. I also confirmed with ground comms between acft and TransAlert, and with Ground Control. This is C-17A 96-0001, from Charleston 437 AW; and he is acting as the ETR Downrange Shuttle to Antigua and Ascension Island this week, in lieu of the Air Transport Intl contractor acft. So now you have the "rest of the story," as Paul would say.
He will come up late tonight on 10780 kHz USB, not with Cape Radio, but with Ascension Radio, to request his late-night arrival to security folks at Ascension. I know this guy's habits better than his wife. :--D

That sucks, you'd think that they (NWS) would assure crossover coverage. The problem that I have with NWS and Weather Radios is that the signal doesn't seem to penetrate into those areas sometimes most in need of coverage. We camp by a large lake in Pennsylvania, and the weather coverage is "barely" adequate. Also near Lake Erie in Ohio, I took my weather radio, but got NO coverage until I cannibalized my shortwave reel antenna, stretched the wire across the room, and connected it to the weather radio, providing the merest of coverage even then.

Me thinks that the NWS needs overhauled. It's quite routine in Pittsburgh, during a lightning storm to loose the broadcasts entirely. You would think that they had an alternate transmitter. Apparently not.

Regards.

1143. Monitoring Times Trunk Freqs for Florida are Wrong?

Newsgroup: rec.radio.scanner
Date: 2003-05-26 23:19:49 UTC
From: billy8156@yahoo.com
Message-ID: <d8c04b3f.0305261519.5420a042@posting.google.com>
Source record: 30674

Ok I just got my new Uniden 785D and digital card. The first set of frequencies I programmed were for the Kennedy Space Center. At first I used the frequencies posted on the Monitoring Times website. After hearing nothing I remember George's post that the Monitoring Times website freqs were not correct for KSCs trunk system.

I then received the correct frequencies and everything was working great.

Today I take a drive. First I programmed in the Florida State system in hopes of hearing some FHP comms. In the Jan. 2003 issue of MT I noticed that nearly every city/county listed for Florida had the very same group of 20 frequencies. The range was from 853.8375 to 854.3125 MHz. The only problem was that I heard NOTHING! Not even a control channel on any of the 20 frequencies listed. I was driving from Titusville to Daytona Beach and up to Putnam county. Didn't matter where I was I heard nothing.

After getting home I started searching the internet and found a site that listed 30 different frequencies for the Florida State system. None of the frequencies matched anything published in Monitoring Times. But they worked! Now I am receiving the FHP just fine.

Now could someone tell me, what was nearly 3 pages of frequencies published in Monitoring Times really for, they weren't for the Florida State system as the article indicated. This was twice I used Monitoring Times as a source of frequencies and twice they didn't work.

Bill

I made a mistake and bought the wrong software and interface cable at
Radio Shack today. Since it's software it cannot be returned. I already
have one utility and thought maybe this other one would work better.
Well it appears they are the same thing but for different scanners.

Therefore I need to sell this software with serial interface cable.
It's for the following scanners:
PRO-89, 79, 76, 2016, and 2017

If you have one of those scanners and would like the software and
cable to use your computer to program it, then this is for you.
I just paid $15.00 for it. I'll sell it for $13.00 and I'll even pay
for shipping.

If interested, contact me via email at rich@richgreene.com .

1147. Seattle/Tacoma Area Trunking Frequencies FREE

Newsgroup: rec.radio.scanner
Date: 2003-05-27 00:33:41 UTC
From: ?Old Sarge 2003?? <vapr69@yahoo.com>
Message-ID: <baubnl$k6j$0@pita.alt.net>
Source record: 30678

I have a complete set of frequencies for most services in the
Seattle/Tacoma area of Washington State. Right now it's all
hardcopy. If anyone would like the listing, let me know via
email rich@richgreene.com and we can make arrangements to
get them to you.

I'm going to scan them into .pdf documents and eventually put
them online for downloading. Because .pdf's are rather large,
I wouldn't suggest the downloading unless you are on Broadband.

I'll post here when they are ready for downloading.

If you are in the Seattle/Tacoma area, we can make arrangements
for you to pick them up in Federal Way.

A good friend Tom Buckner, WB7RFL now deceased, gave them to me
shortly before he died. Because he worked for Search and Rescue,
he had virtually every frequency in this area. His Bronco had no
less
than 30 antennas popping out of the roof for all of his radios and
scanners.

Let me know.

The Other George posted:
> Wow whats that 40 or 50 scanners??
> You no you can use a scanner for more then one frequ don't you???

40 or 50? Count again: 89 on that listing, and I have not updated it in a while. Have bought a few more that aren't on there too. And I don't buy them to sell them; I keep all the scanners I buy. Each one gets to be special to me after I program it for its unique purpose.

I'll buy more when I see another one of a type I don't have. Not sure why what I buy should bother you so much.

Probably the easiest thing to do would be to go to the Radio Shack website
and look at the manual they have online. Here is the link to the page
listing for the 2022:

http://www.radioshack.com/ProdSupport/DocumentDetail/DocumentDetailIndex.asp?P=support_ele
ctronics&D=2849&T=htm

Due to the length, you may have to copy and paste the above URL into your
browser.

Following that logic, makes me wonder why you thought the entire world was interested in an inventory of what you owned. What response WERE you looking for? I assume you wanted people to be impressed.

I'm impressed! I admit it! But showoffs tend to be tiresome quickly :)
Nice collection nonetheless!

If you told them what scanner you wanted the software for, and the clerk sold you the wrong package, then it certsainly IS returnable. Many people have been sold this wrong software package by inept RS clerks, and as far as I know, all have been able to return it.

Their mistake, not yours! Complain loudly! Contact the mgr, district mgr, whatever it takes.

1157. Recieving Australian MDT's

Newsgroup: rec.radio.scanner
Date: 2003-05-27 13:51:13 UTC
From: Eoin <eoinduffy@hotmail.com>
Message-ID: <l3KAa.3948$ES.43755@news-server.bigpond.net.au>
Source record: 30687

Could someone please shed some light on receiving and decoding MDT's information for instance taxis in the Melbourne area , I have done extensive
research on google through the groups and have also hunted around the web for some time but to no avail , I understand that there are programs out there like MDT monitor and the like that can decode via sound card but what I am curious about is are there and programs for Australia that can decode taxi information (which as far a I understand is a custom build proto. and not the Motorola) or are there other frequencies or protos. out there that are well worth a listen to . Your comments on this matter would be greatly appreciated . I know Kevcat seems to be a wealth of knowledge in this group so if you could spare a minute to hurl some comments back it would be great .
Eoin

1158. Pro 2022

Newsgroup: rec.radio.scanner
Date: 2003-05-27 15:38:40 UTC
From: Melvyn T Phillips <melvyn@g7onh.fsnet.co.uk>
Message-ID: <bb00ppvfv1@newsg3.svr.pol.co.uk>
Source record: 30688

According to the SPEC that I've just downloaded from Radio Shack, it states
that the Pro 2022 will go to LOW VHF, that being 30-54 mhz in 5khz steps and
50-54 Mhz Ham Band in 5khz steps.
I've tried to dial in these frequencies, but the displays show ERROR and
beeps.
Is there a way that this Scanner can be 'opened up' to receive this
lower band of frequencies?
Any help would be really appreciated.
If the spec says it goes that low, then I guess there IS a way of doing it?

1159. Icom PCR1000 and Scancat Gold..?

Newsgroup: rec.radio.scanner
Date: 2003-05-27 17:45:08 UTC
From: Skipp says reply through the sonic server <skipphatesspam@yahoo.com>
Message-ID: <bb0874bqn3@woodrow.ucdavis.edu>
Source record: 30689

Hello there,

I picked up a copy of Scancat Gold while attending the Dayton Hamvention. The program works great, I'm impressed and very happy with the software.

Anyone else running Scancat with an Icom PCR1000..? ... or other receivers that would care to comment on the operation. I'd like to ask you about some of the better scan settings/values you have entered. Or your generic scaning values.

Seems that scanning really fast confuses the serial 9600 baud communications. Can the PCR1000 baud rate be increased..?

Just post your followup here and I'll read it. You can also contact me through the Email icons on the Sonic Server.

thanks
skipp

I suppose you have the testimonials to back this up? You just forgot to post them right? Please.

> And if it's so great why is there no street address or phone number at the
> Pozilla web-site?? Why can't anyone find anything on Pozilla anywhere in
> AZ??

Someone posted their phone number AND business address a while back. You just forgot. Which is typical of you.

> Real simple, they are doing there best to hide from the folks that
> made the mistake of buying the junk..

Uh huh. That's why their address and phone number are public record.

>I'm glad it works for you and *me*
> but it did not work for anyone in the local scanner/ham club and from the
> e-mail we get daily it didn't work for several thousand other folks ether.

ROTFL!!! Several THOUSAND emails? I guess only 3 of them were worth posting on your web site? What about the rest? (And no sparky, before you ask, spam mail doesn't count).

>
> And 15 scanners?? I have a life, i.e. I don't need to listen to everybody

No you're not. This, like the rest of your spew, is a deliberate lie meant to convince everyone that you're a "nice guy". Nothing could be further from the truth.

> Thanks for the letters, We can't use all of them
> but we will put up a few more.
> http://webpages.charter.net/moment/letters.htm

So why keep us all in suspense? Shouldn't be too hard - you've got several thousand to choose from, so you say. Cut and paste is an easy thing to use, even for you.

Unless you don't have these letters as you claim you do.

You do realize, idiot, now that you've opened your big mouth, I'll expect you to back this up with these thousands of letters on your web site for all the world to read. Otherwise, you'll only prove my case that you're nothing more than an immature fraud.

Allan is just that and nothing more, a big showoff. If you notice the only time Allan posts a message is to either sling mud at George or to show off. This is why I don't have much respect for Allan. I also don't trust his postings because I am sure he has embellished his logs and equipment list just to try and show off.

I live in the Florida area pretty close to Allan. Allan does the same things on the local email lists that I below too. Either slings mud or tries to show off. But ask Allan for help and he'll either ignore you or rip you a new asshole.

I respect George's postings here because George takes the time to help others with questions. When was the last time did someone post a question and Allan provide an answer? I can not remember any. I do remember a few times in the last year when George jumped in to answer a newbie's question only to have Allan start slinging the mud. And that just happened last week!

To George, thank you for all your answers and informative postings. Keep up the good work. Respect is earned by helping others, not by showing others up. You've earned my respect.

Roger

1162. Antenna Overload / Too Much Signal

Newsgroup: rec.radio.scanner
Date: 2003-05-27 20:07:31 UTC
From: adoniscat@yahoo.com
Message-ID: <5147a47d.0305271207.2c986561@posting.google.com>
Source record: 30692

I'm trying to use a Scantenna with a Pro-95 and am experiencing lots of overload in the VHF range. I can use the attenuate function on the scanner and make many signals receivable, but I'd rather figure out how to solve the issue before the signal gets to the scanner. Based on research I've done, it appears that the scanner is simply getting 'too much signal'.

Any suggestions on how to solve this? I've tried the RS TV/CATV Attenuator/RF Attenuator (15-678), which didn't do anything more then the Pro-95's attenuator. Would the RS FM Trap (15-577) be beneficial? Is there any sort of passive preselector or other widget I should try? Is my only alternative to buy a base station or other scanner that handles the strong signals better?

Thanks in advance,

-sam

Maybe not. Sounds like it's a closeout item (only $15). If so, all sales are
final, do not pass go, do not collect $200.

He might be able to negotiate for in-store credit, but again, $15 is not
enough to justify the hassle, at least it wouldn't be to me. Hell I'd
probably just keep it and check ebay/pawn shops for the appropriate scanner.

Source record: 30601

I was told by an employee from the radio shop that handles the City of Redding (calif) radio system that they were switching radio systems soon. They are now using a Motorola trunking system (analog). The person told me today they are currently using a Privacy Plus trunked analog and are simply switching to a digital system (same freq and all). I was under the impression there were no scanners that could receive/decode Privacy Plus systems. My Pro-93 (as of now) picks up/monitors the local PD great. Question: If they do go to APCO-25 digital, do those typically run using Privacy PLus as well? I am wondering how accurate the info was I got today.....thanks all

Sam,
It might not be "general overload". It could be just FM Broadcast band over which can reduce sensitivity over the entire scanners frquency ranges. If this is true the scanners Attn feature could not be much help as it would only attn. the freq you are trying to receive when infact overload on that freq isn't the problem.

FM Broadcast Overload might be the problem. I had the same problem with my Uniden BC 785's. When I would use a ScanTenna it seemed to have about the same sensitivity as my Uniden BC 780's. However when I would put the 785's on a Create Log Periodic which is an 11 dB gain beam antenna it appeared that the sensitivity of the 785 when down.

Never having an overload problem with any of my other scanners I found overload hard to believe. But just to see what would happen I bought a Stridsberg FM-Notch filter (I believe its about 65 dB loss in the FM broadcast band). Well that help my problem a lot.

You may be able to do trunk tracking and conventional scanning with the BC 895 UNDER SOFTWARE control. The Winscan 2.1 may support trunking and conventional, at the same time. I never have used these products. Check out

Melvyn, since you live "across the pond,"
you probably have the Euro version of the
Pro-2022. If your unit is equipped with a 220V
mains cord, and your VHF-Lo band goes from
68-88MHz, then you have the Euro.

Usually there is a diode that needs to be re-positioned
to switch the VHF-Lo band from 68-88MHz (Euro)
to 30-54MHz (USA) Sometimes it just involves removing
a solder blob off some pads and soldering over another
set. The catch is that you can only have 30-54 OR 68-88MHz,
not both. (An exception to this is the Pro-43 handheld which
will give you continuous 30-88MHz)

You will also need to change out some parts in the VHF-Lo
front end to bring the bandpass filters in line with the USA
specs.

To accomplish this without a service manual would probably
be extremely difficult.

The freq is 165.2375. Some scanners will not display to four-decimal places,
so the "window freq" reads rounded off; but USCS rptr is on 165.2375.

I just verifies on www.trunkedradio.net that the first Type 1 trunked systems also had the name 'privacy plus' attached. my question is still this: If a system is merely switched from analog to digital, will the current Bearcat and future Radio Shack scanner be bale to monitor?

Not sure, but I believe the UK version has a different band setup then the U.S. version. Check www.mods.dk, it may give a diode configuration for the various versions. I know that the U.S. version had a diode that blocked the cell bands, and removing a single diode reactivated the band segment. Strictly off the top of my head, I think the UK version covered freqs around 60-80 MHz instead. Yep, just checked the site, adding diode 42 changes the reception to 68-88 MHz from 30-54 MHz. But it looks as if you have different alignment and components for the low end, you may not be able to use your scanner on 30-54 MHz. See the site for more information on the 2022.

Well Allan I guess FANGS have been using them during Training missions since at least 10/26/01. In fact it was 10/26/01 when I first heard SEARLORD assign 316.3000 to a FANG working 4-X as a discrete freqs.

On 10/26/01, 3/19/03, 3/20/03, and 5/27/03 I monitored FANGS used both 228.9 and 316.3 while playing in the Xray & Yankee areas.

On 10/2/02 your friend Roland R. "Mac" McCormick III also reported hearing FANGS using both 228.9 and 316.3 in the warning areas (ref: http://groups.yahoo.com/group/FLACOM/message/2427). On 5/7/02 McCormick also reported the following ï¿½316.300 heard as a new (for me) 125th FS, FL ANG
air to air.ï¿½ (ref: http://groups.yahoo.com/group/FLACOM/message/1986).

So Allan, they may be used by NORAD (and youï¿½re right they area as Iï¿½ve hard calls from other aircraft to OAKGROVE). However in the log, as stated, they were being used by Florida Air National Guard (FANGs) while training in the SEALORD controlled offshore warning areas.

Why did you post you're little rant on MilCom? Oh, I guess because
someone beat you to the punch as they backed up what I heard.

For others on the board here was another MilAir monitor which have heard
the same frequency group being used for training. Here's what was
stated on the MilCom email group:

"The 125 FW regularly uses OAKGROVE frequencies
for their training; sometimes working with OAKGROVE
and sometimes not. 228.900 is one of the ones frequently
used for this. Information I have indicates that 316.300
isn't a SEALORD discrete but an OAKGROVE frequency
as well. They usually don't mix/match discretes; they'll
use two SEALORD discretes or two OAKGROVE discretes,
but usually not a combination of the two.

Mac
Savannah, GA"

Roger's observation was right, the only time Allan posts is when he make
ever attempt to discredit me, sling mud, or brag. Ya'll noticed, when I
get time to prepare logs and publish them, Allan stops posting his logs?

First of all, ignore Motorola's marketing. "Privacy Plus" is not. Analog trunked systems can be followed with "Trunk-Tracker" scanners.

However, APCO-25 is not decodable with current analog scanners. You need one that explicitly can decode it. Note that I used the word DECODE, not DECRYPT. Encryption is a feature which can be turned on in various digital modes. However unauthorized DECRYPTION is a violation of DMCA, recently enacted by Congress.

Mind you, I think such regulations are utter foolishness and stupidity. But that doesn't seem to be a consideration where vested interests and Congress are concerned.

Hadn't seen this, but it corroborates what I said: They are in fact OAKGROVE freqs. The fact that an acft uses them while in the area controlled by Sealord, does not make them Sealord freqs. They were not talking to Sealord on the freqs.
Military procedure is definitely not one of your strong suits.

And they weren't talking to OAKGROVE either.

My logging never said they were SEARLORD freqs. I simply put SEALORD
there because at the time of use it was being used in conjuction with a
SEALORD controlled area. The mission logged was a lot closer to being
a SEALORD event than a NORAD/OAKGROVE event.

Again, they weren't talking to OAKGROVE either.

I'm not comparing how long your logs are or how many you post. I just
think it is funny that when I post a few logs you quit for a while.

But you say you post extensive logs nearly every day. Thats not really
true. By vieing the MilCom archives I see you posted logs for the
following days this month: 1, 2, 11, 12, 13,14, 17,18,19, 22. That's
about 10 days. So far this month 27 days have expired. 10 isn't even
half of the days for the month.

Just one more Exaggeration of yours.....10 out of 27 isn't "nearly every
day".

Sam, the antenna is not being overloaded, the scanner is. This is normal for a handheld scanner when connected to a decent outdoor antenna. The solution is to switch in the scanner's attenuator. Ten dB of attenuation will reduce third order intermod by 30 dB.

Often the culprit is high power paging transmitters in the 152 MHz or 454 MHz region. A trap filter tuned to offending frequency MAY help. Or you can make a poor man's trap out of a tuned coax stub. The stub should be 1/2-wavelength long (taking velocity factor into account) and shorted at the far end. Place a BNC "T" connector at the scanner input. The antenna goes onto one end of the "T" and the stub goes to the other.

I had this problem when using a handheld 2-meter transceiver connected to a simple 1/4-wave ground plane. Local 152 MHz pagers were causing all kinds of intermod. I built and tuned a trap filter (using a network analyzer) and it made a big improvement.

The first thing you need to do is identify which signal(s) are causing the problem. It may be that there are a multitude of signals on many different frequencies. In that case, the attenuator is the best option. Or get a base scanner with good dynamic range.

I've purchased 2 of Bob Groves frequency CD's in the past. After following some of what I see come from MT's website and his CD's you need to take what you see with grain of salt. I've found many errors and/or outdated listings. Plus sometime ago its was discussed on MilCom group that Grove is notorious for including bogus data to try to catch copyright violators.

One thing about Groves CD's that I don't care for is large amount (over 82% by volumne on the Military CD and worse on the Federial CD) of government manuals Grove puts on the disk. These are avilable free on the internet. Plus on the net you can get more current versions as Grove doesn't update the FLIP docs onthe MilCD at the rate they appear on the web.

But back to the MT online listings. Their NASA trunk system isn't even close. The best source the NASA trunk system is: http://home.cfl.rr.com/scanner/brevard.htm which includes a few talkgroups. I'm still new to monitoring the NASA trunk system but have heard many talkgroups which aren't on the above mentioned page. When I get a chance I'll do a little write up about what I heard. Also the MT website has an incorrect freq for Daytona's 2M repeater. Several people have 147.1500 listed on their sites when in fact it hasn't been used in at least 2 years, I know I live very close to that repeater. Just the other month that 147.1500 once again appeared in Pop. Comm. magazine. I tried to inform the author of that article but never received a reply.

In the Daytona area the 147.2700 (Ormond Beach repeater) is what actually re-xmits shuttle audio.

No need to check; I'll take your word for that. Hey, it is the summer. If you lived in a wonderful waterfront home, and had a nice boat, and you loved fishing as much as I do, you'd do as I have been doing. Fishing the Banana and Indian Rivers a bit.
Soon I'll be taking a trip down to my Lakefront home nearer to Avon Park. I'll be bass and crappie fishing there, but I will be listening to Avon Park Ranges and Tarpon Ranges, so I won't let you down; I will create some postings there.
Guess I don't spend 24/7 nested next to my scanners, as you claimed a day or so ago. Got lots of toys to play with here, not just scanners. Got boats down at the Lake place too. Yeah, life is good. Heh heh.

>Any idea what the foreign language traffic I hear from time to time on 10780
>is and am hearing now at 2125?

10.780 is not only Cape Radio, but is also used by the other ETR downrange sites. As you may know, nearly all of the ETR downrange sites have been closed, but Ascension and Antigua remain. You might be hearing one of them. Also, although SATCOM is the preferred comms method for foreign STS support sites outside of ETR, some of those sites do use 10780 occasionally. Remember the early days of the Shuttle when the tracking ships like the Redstone, Vanguard, Observation Island, etc kept up steady comms on Cape Radio. The last of those rusting hulks departed the Cape Canaveral area about two years ago. They are still discussed by some of the older members of the Missile, Space and Range Pioneers, of which I am a Life Member.

>I'm impressed! I admit it! But showoffs tend to be tiresome quickly :)
>Nice collection nonetheless!

Thank you for the compliment.
I think you may have come into this discussion too late to realize why I posted the equipment listing. I was not trying to impress anyone. Let me explain.
That equipment list was first prepared a few years ago when folks on the FLACOM and Milcom Email Groups were asking me what equipment I had. I posted it maybe two or three times again, when the same question came up on a scanner Email Group. I do not use it as my Sig Block.
Within the past two weeks, George Fetter has repeated claims that I do not have the equipment I claim to. This led me to post that equipment list and to repeat an offer I had made to George earlier; that I would pay him $10,000 if I could not prove that I had at least the equipment I listed.
Here is the quote of the offer I made here:
"I make the same offer today, except I'll increase the bet to $5000, even $10,000. This is a public offer. The list is public too but here it is again. Will you accept my offer?"
That is why the listing appeared here. It did not appear here because I was trying to impress anyone. That listing is "old news" to most veteran Mil comm monitors.

It sounds like your RF amplifier was being driven into gain compression, by out of band signals. There is another mechanism that can cause problems.....if the 1st mixer doesn't have a high enough 1db gain compression point, IMD products will be the result. I am not sure why portable units don't use a good mixer; Motorola has been using doubly-balanced diode ring mixers in their portables for several years. I guess, one could say, this is done to lower the current draw, since higher LO injection levels are required for this type of mixer, but in the end, the consumer pays.
The Icom R100 was an example that used a diode ring mixer, but this was a mobile/desk unit, and early samples suffered from recriprocal mixing problems. It took them a while to get their act together, on that synthesizer. I have one of their later units, and it seems to work ok.

I am looking to purchase a receiver to use as a second scanner. I only need VHF and UHF for what I want it for. I have looked at the Pro 79 and Pro 82 at Radio Shack's web site. Both of these would seem to fit my needs for what I'm looking for and both are the same price. They seem to be nearly identical in features and capabilities. Does anyone have any experience with either of these, and can anyone help me determine what the difference is between them? Also, both have weather alert. I've never had this feature on a scanner before - only on stand alone weather radios. This sounds like a nice feature to have - any comments?

jr127@com.net wrote:
> Would you like to share the web site you found the correct frequencies?

http://www.trunkedradio.net has them correct.

Soon I'll be adding the newest talkgroups to that site as I just become
database manager for the FL trunked section of http://www.trunkedradio.net

If you program them in and have problems receiveing please let me know
and I'll be glad you help.

It is a digital system and in order to receive the voice comms you'll
need the Uniden 250D or 785D with digital card. However you can still
receive the system without the digital card and still be able to search
for talkgroups, you just won't hear the actual comms.

I'ts a search and lock out type app, that creates stats additionally. Worked quite well, I had a demo at one time from Bills site.

I Think the company was DataFile. It's mentioned in the WSR.

> repeat an offer I had made to George earlier; that I would pay him $10,000 if I

Actually it started more than 2 weeks ago when he posted this "hugh"
list. After a few friends drove by his house (actually up to it since
he lives at the end of the street, drive any more and you get wet) they
laughed. They said "where's the beef". Meaning that out of the whole
list there were only a Scantenna, vhf vertical and possibly one ground
plane. No beams, or the other nearly 3 dozen antennas.

So we asked if they were down or just "out for cleaning".

After seening that reality didn't match what his list included. An also
matching up what he logs we've concluded that a few things..... Lets
face it, if he really had the beams up and functioning (granted, his
list didn't say they were up and functioning) he would be hearing a heck
of a lot more than he reports. And we know who Allan likes the spot
light, if he were hearing Sealord, Pinecastle and even Townsand Rng in
Georgia, and a few others he would be logging them. With the antennas
actually up at his house matches what he is logging. So there are a few
(not just me) who don't believe that his antennas either exist or up.
Granted, they could exist, but they're not up and functioning.

One time he said "we'll most of them are at my home in Avon Park". If
that were true then why don't we hear about logs when you're at your
Avon Park home? If that were true we should be seeing all kinds of logs
for the Whiskey areas in the Gulf. Logs from NAS Key West and so one.

But no, I'm not going to play your little games at making bets. I don't think I ever said you didn't have the equipment you claim. I mearly said we haven't seen all those antennas you bragged about and we asked where are they? The only problem is that you logs don't match the stations you should be hearing if you really are using the equipment you say you have.

Several people have tried to meet Allan but Allan isn't a friendly person or doesn't like people coming over to his house. He's ignored requests from several people who was just getting into the hobby. But that's fine, if Allan doesn't want visitors that's his choice (or does he have something to hide? Secrecy breed suspicion.... I've had many hobbiest to my house for a chat, its fun meeting others in the same hobby. Everybody learns something and has a chance to help others.

Ok, enough, I have fish to clean, 5' 2" Black Tip shark from the Flagler Surf is calling me to be cleaned and to be grilled tomorrow.....

George
http://www.MilAirComms.com <-I have what I say, I welcome any and all radio hobbiest to my house. I enjoy helping newbies in this fine hobby.

Yup... Use the Win95 software from starrsoft. I've got a Pro93, and I use their Win93 version. I'm pretty sure they're near identical, other than the extra memory for the Pro95. If you've read your manual, and become familiar with the way the radio is programmed, the Win95 program will be completely intuitive.

I personally really like the ID sub-bank ON/OFF mode option that you can turn it on permanently with a checkbox in the program, instead of turning it on manually every time you power up the radio. It'll let you turn your talkgroup banks on and off while you're scanning a trunked system, similar to turning the frequency banks on and off with the push of a button.

Later!
MG

I bought my cable through the link at http://www.pro95.com/. I got
the cable three days after clicking the buy button. The cable works
great with the Win95 program you can download from
http://www.starrsoft.com/freeware/Win95/default.asp.

You can also find some sample files for different areas at
http://groups.yahoo.com/group/PRO95/.

Enjoy! Bart

Your source or references to your above information would be appreciated.

I have heard FANGS and/or SNAKES ask SEALORD for a discrete and be given
316.3000. From that it would be easy to understand why I've listed it as
a SEALORD discrete as it was assigned by SEALORD as a discrete.

Granted, it could have been assigned as a discrete because it was a NORAD
training mission. However via the radio comms neither you nor I would know
it was a NORAD mission or just a standard day in the warning areas for FANGS.

FANGS.

You asked, politely, and I am happy to oblige with my references and sources, George.
PLEASE, do not get your feelings hurt, because no disrespect is meant, George, but while you say that you would not know if it was a NORAD mission, I think I might.
Now that you are living in Florida, you are beginning to hear FL-ANG activities according to your recent postings. But some of us like Mac and I have been monitoring the FL-ANG training missions and the NORAD Southeast Air Defense Sector comms for a very long while. Age has its advantages, few as they are.
The USAF does not just hand out its freqs and identify the purpose of each one. So we were left with depending upon our searches to find the freqs, and then to plug them in and listen long enough to identify the user. That was truly how it was done for years. There were no computer look-up sites when I got into this hobby.
Fortunately people like Larry Van Horn, Steve Douglas, Jack Sullivan, and a few others published books so that these identified freqs became known to more people. Those people I include among my sources. You have to find sources you trust, because no one hears or knows everything.
More recently, with the advent of computers and postings, folks like Lindsay Blanton, Larry Fowler, Ted Moran, Mike Hein, Gary Tester (miss him a lot), Mike Fink (thank God for Mike Fink), David Norton, Mac McCormick, Jack Painter, Jack Nesmith, Ron Perron, Sandy Sandberg (certainly Sandy), Bob Langley, Paul Cobb (a precious gentleman), and a host of others who were or are on this Milcom Email group added to my database. I scour every message I get from Milcom, and from about 30 other Email groups that have Milcom postings.
My sources also include Military friends at Patrick, Eglin, Ellsworth, Robins, Maxwell, just in the Southeast, but I won't name them here.
For more years than I like to count, I have been taking these inputs EVERY day and meshing them with my own 40+ years of monitoring. I spend about 4-6 hours a day adding/updating my computer data base of freqs, acft, ships, base freqs, etc.
Sorry that this sounds like an Academy Award thank you speech, but these

are truly the references I have and my sources.
Here are some less personal references that corroborate the NORAD freq usage I mentioned to you:
Monitoring Times, truly the Bible of our hobby. The searchable CDs of their archives
confirms the NORAD freqs and just about every other Mil freq. Larry has written
articles specifically on NORAD many many times.
Milcom@ qth.net message archives,
FLACOM@yahoogroups message archives,
Strongsignal.net message archives,
CARMA@yahoogroups.com message archives, especially Ted Moran and Mike Hein messages.
Here are some websites that corroborate the NORAD freq usage:
http://www.angelfire.com/sc/scannerpost/topmil.html
http://www.abovetopsecret.com/pages/mil_freq.html
http://members.tripod.com/columbus_east/uhfvhf.shtml
http://webpages.charter.net/randyhall/military_vhf_uhf_frequencies.htm
http://pages.prodigy.net/redstar01/HF.htm
http://home.earthlink.net/~steve.oconnor.
There used to be some others but a lot of folks have removed NORAD freqs from their sites during CAP activity.
Hope these sources will help you and some others here.

Any one can make up a list, I've seen George's shack so I know what he has in it. You got any pictures of your shack?? Oh with you standing in the picture with a daily news paper in hand so we can all see the date??? And I have a tuff enough time keeping up with 3 scanners, so how do you listen to 80 at the same time?? How do you know whats going on on each one?? Do you set all day in front of them and listen to world around you?? Why would you need 80 + scanners??

1237. fs: Realistic PRO2026 Scanner

Newsgroup: rec.radio.scanner
Date: 2003-05-29 11:14:48 UTC
From: pm <pmik@merr.com>
Message-ID: <3ED5EB91.DBCBAF4C@merr.com>
Source record: 30518
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt.radio.scanner

FS: Realistic PRO2026 Scanner, model 20-148a, date code 7a4

-100 channel conventional scanner (not a trunk-tracker)
-VHF Low/High, UHF, 800, & 900 MHz coverage (not cell capable)
-discriminator tap professionally installed with mini-phone jack
-works well as a "Trunker" control channel decoding receiver
-good electrical condition
-okay physical condition, missing VOL knob & bottom flip down stand
-includes AC wall transformer, whip antenna, mobile bracket

This unit has been tested, was working well when removed from service,
is clean & in good physical condition, but is sold as-is.

Price is $80 shipped via USPS to the US only. Payment via USPS Money
Order only.

Contact via e-mail

He does not want folks over to his house because he's a cocaine dealer and because he does his own product he's paranoid and needs all the scanners to listen to the DEA, FBI, ATF, CIA, NSA, CID and serval other 3 letter agencies. You don't see all his antennas because they are in his attic!! Just do what I did with that *me* users, i.e. add him to your filters and poof he's gone from the group... Ether that or you two need to go out in the street and have a good old gun fight, "I'd pay a dollar to see that" :-)

I didnt come in late. I saw it all. This thread isn't plonked YET.

I still think you are trying to show off. reason?

You DO know George's email, right?

Assuming yes, then why didnt you email him that. Why did you think you had to get your 'challenge' to him via THE WHOLE NEWSGROUP AND ALL ITS SUBSCRIBED MEMBERS? Unless you were showing off, that is...

Hey Burr if you look at the starting thread it says "WinScan 780" it does not say a thing about 2.10 for a BC895 & 245!! So if that software is working for you, thats a good thing but the topic here is WinShit780 I mean WinCrap780 no no wait oh yeah WinScan780 not 2.10 :-) And if your 2.10 stoped working how would you get tech support with no working phone number or street address from Pozilla??

Hey George I sent you e-mail with a question a kid that has just joined our local scanner/ham club. And rather then answer him I sent you e-mail with his question. You didn't answer it so I'll ask it here! He was asking about this; Right off your web-site:

2182, 2670, 3253, 4134/4426 (ship/shore), 5320, 5696*, 6200/6501 (ship/shore),
8240/8764 (ship/shore), 8980, 8983*, 11202, 12242/13089 (ship/shore)

NOTES:
8983 is very active during daytime.
8980 used for phone patches to free up 8983.
5696 is very active during nighttime.

He asked "how do I know what frequencies these are?? are they 2.182? 21.82? 218.2? or 2182.0?" "And what the heck is 12242? is that 1.1202? 12.242? 122.42? or 12242.0?" I told him to send you the question because he's new to scanning and did not understand any of the numbers all over your web-site! You didn't answer him so would you answer him here?? He also wants to know what receiver will go to 13089 or 20191. Because the question was asked of whats on your web-site we told him to ask you about these number :-) Help the kid out. He asks, if NASA is 162.6125 what the heck is NASA tracking 20186, 20191 and what receiver goes that high??

>
> He asked "how do I know what frequencies these are?? are they 2.182? 21.82?

It's just the difference between MHz and kHz.
the frequency 2182 in kHz is 2.182 MHz.
Some folks express it one way, others... well, the other way!
Just something one gets used too.

>
> 218.2? or 2182.0?" "And what the heck is 12242? is that 1.1202? 12.242?

It's 12242 kHz and 12.242 Mhz.

>
> 122.42? or 12242.0?" I told him to send you the question because he's new
> to scanning and did not understand any of the numbers all over your web-
> site! You didn't answer him so would you answer him here?? He also wants
> to know what receiver will go to 13089 or 20191.

Most any general coverage SW receiver will do that. Once again, 13089 is being
expressed in kHz, which is 13.089 MHz.

> Because the question was
> asked of whats on your web-site we told him to ask you about these number
> :-) Help the kid out. He asks, if NASA is 162.6125

161.6125 is being express in MHz.

> what the heck is NASA
> tracking 20186, 20191 and what receiver goes that high??

And again, 20186 and 20191 are being expressed in kHz, they correlate to 20.186 and 20.191 Mhz.
Same thing, just moving the decimal point, after a while your friend will get used to the various ways that frequencies are expressed, and it will soon be a 'snap'.

Source record: 30526

Howdy,
One of the students in my after-school program developed a real interest in listening to the fire/medics in our area after I brought in my scanner a few times. His dad bought him a Pro94. Unfortunately, the Pro94 didn't let me program in alpha tags, so he has to either keep his list of talkgroup ID's with him or memorize them as he goes. One thing I did like about the Pro94 was that while it is scanning a trunked system, you could turn the talkgroup banks on and off by pressing the ID bank number. I had police in talkgroup IDbank 0, fire in IDbank 1, and medics in IDbank 2. If he is listening to the police, and decided to stop, and switch to fire and medics, he just has to hit "0,1,2", and he can do it on the fly.

I wished my Pro93 could do this, without having to stop scanning and hit "program, trunk" and then scroll through the banks and turn them on/off the individually with "function,1", and start scanning again. Well, it turns out it can (but it's not in my manual).

The drawback to this mode on the Pro93 is that the radio has to be receiving a transmission to do these things... but it still beats "program,trunk" to switch quickly. Note: Unless you use the computer software to turn this mode on, your radio will reset back to normal when you power off.

While you're scanning in the trunked system, hit "function,trunk" while you're receiving a transmission. Your radio will replace the second line of your display with "T IDbk 01234" The numbers are your talkgroup ID banks. Press "function,#" where # is the number of the ID bank you want to turn on/off. Just like your frequency banks, if the number appears, the bank is on, if a "." appears, the bank is off.

I know my Pro93 works this way... I assume that your Pro95 will be the same.

Give it a shot and let me know if it works for you!
Matt

1246. FS: AOR 8200B MkII Scanner, 3 months old + extras / $350

Newsgroup: rec.radio.scanner

Hi and thx for reading. I have a pristine AOR 8200 MkII B for sale, purchased new at Lentini a few months ago. A serious scanner, but I live in the NW Hills of CT and it's just too rural for listening to anything other than the county FD dispatch (and I'm a firefighter so there's no shortage of FD radios here). Comes complete with AOR case, computer cable, software w/license, AOR MW and whip antennae, all original boxes, clip, docs, warranty cards. $350, payment by Paypal. Will ship immediately w/USPS Priority Mail. Email N1QVE at harry@connix.com. Thanks & 73.

Not a problem for the true scanner buff. Just pick up a Uniden BC 785D and
the matching Apco Card and your set. I just bought the 785 for $349, but
the optional Apco Card is Extra... I don't need it so I can't report back
a price.

The 785D should do standard "trunk tracking" and the Apco 25 "crap" at the
same time.

A comment from the founder of Milcom. This was posted on Milcom today, and since that is a public forum, I am sure Larry, the founder of Milcom and author of many books on Mil comms, will not mind me posting it here. I am really proud of it.

AL STERN Satellite Beach FL

Subj: RE: [MilCom] North-Central Florida Mil Logs 5/27/2003

Absolutely, positively correct and my source is directly from the horse's mouth.

228.9 is a confirmed nationwide NORAD discrete. In the Northeast Air Defense SOCC (Huntress) it has been used for the DC CAP, Mid Atlantic CAP, and SE MI CAP missions. It has also been observed in use by Oakgrove/Okie Sam in the Southeast Air Defense SOCC as well as in the Western Air Defense SOCC (Big Foot)

316.3 has only been reported in use in the SE and Western ROCCs. Here in the SE there has also been extensive AWACS-Jstars activity reported on this frequency. As for the Sealord activity, one only has to check the FACSFAC Jax Ops instruction and you will not see that freq listed nor has it ever been reported on this newsgroup as a discrete in the years since I started this list.

So Mr. Al you the man. And thank you very much for the kind words about MT and the great people on this newsgroup. We have some of the finest folks on this list in the milcom biz. A lot of them including you have been with this list since I created it. And you have been an active and vital part of the hobby. To each of you who takes the time to post and share your monitoring with others -- thank you very much. We all sincerely appreciate your time, patience and sacrifice.

73 all and good hunting,

Larry Van Horn, N5FPW

I know its not in the FASCFAX Jax Ops manual, I have a copy and have
read it cover to cover.

However I know what I heard, my ears to lie. If its ï¿½extensive
AWACS-Jstarsï¿½ then why did I hear SEALLORD assign 316.3 to a FANG

working 4-X on 10/26/01?

Also, I guess Larry doesnï¿½t look very close at the logging on MilCom because on 11/27/02, 3/19/03, and 3/20/03 I had posted logs which I had labeled 316.3000 as a SEALORD Discrete. On these three dates no one informed me that it was a NORAD freq. Nor did Larry at that time say anything as well. However Larry is wrong in his following statement ï¿½nor has it ever been reported on this newsgroup as a discrete in the years since I started this listï¿½. Because it has on at least the three dates I just mentioned.

Again I never said you were wrong that its not a NORAD freqs however I was simply reporting what I heard. I guess when the Pepsi 400 comes to down youï¿½ll again tell me I didnï¿½t hear FANGS on VHF like you did last yearï¿½.. It blows my mind when I sitting here looking at my scanner, seeing the frequency, and hearing a FANG callsign coming from my speak then be told ï¿½No way. FL-ANG FANGs are F-15s incapable of VHF.ï¿½ï¿½..Allan, did you ever learn then what it was I was hearing????

Also Mac on 10/10/02 reported the following logging ï¿½316.300 SNAKE (F-15A, 125th FS); ACM in W-areasï¿½. No, he didnï¿½t say it was a Sealord discrete however he did say pretty much what I did, it was being used by FANGS and/or SNAKES in the Sealord warning area.

Tourettes is no laughing matter Georgie. I recommend immediate treatment by
shock therapy: Take a bath with your toaster.

>And if your 2.10
> stoped working how would you get tech support with no working phone number
> or street address from Pozilla??

Probably via email like anyone else? Gee - what a concept. I think Pozilla
should set up a 900 number just for you. Wouldn't that be great? For the low
low price of $49.95 a minute, Georgie can call the "I'm too dumb to use
email" line and tell it to someone who cares.

Where's those thousands of letters Laughing Boy? I'm waiting to read what
you - I mean - they wrote.

And hey, how come you won't come clean and tell us where you work so we can
verify your "I work in government" claims?

For a good laugh, please go see this site:
> http://webpages.charter.net/moment/winjunk.htm
>
and this one....
> http://www.scannertesting.com

...You'll see that Georgie No-Spam is definitely all we've come to expect
from years of government training.

1252. Nevada Seeks To Ban Radio Freq Info

Newsgroup: rec.radio.scanner
Date: 2003-05-29 17:36:58 UTC
From: JohnW <no@no.no>
Message-ID: <Xns938A8A6781E66JohnW@216.166.71.234>
Source record: 30533
Cross-posted to: alt.radio.scanner,rec.radio.scanner

(Found and slightly lifted from Strong Signals)

There is a recently proposed piece of state legislation aimed at beefing up Security for its residents against "acts of terrorism". If passed, this bill would allow prosecutors to charge a person with a misdemeanor or felony (at the discretion of the court based on their interpretation of the defandant's intent) for "disclosing or releasing any document, record or other item" (there's a nice, specific term) which "reveals frequencies for radio transmissions used by response agencies" since this may "compromise, jeopardize or otherwise threaten the public health, safety or welfare." (Sec 21.1.f)

If you are a Nevada resident and care at all about your scanning rights, I suggest you immediately call or write your Congressman/woman in regards to this proposed legislation. Act now or forever hold your peace!

>But no, I'm not going to play your little games at making bets.

Of course not. You know I have the gear I claim to. You just prefer to snipe at people with ludicrous claims, and with Email campaigns. I am not the first here who called your bluff and watched you slink away unable to put your money where your mouth is.
Your game has been to threaten people here who disagree with you with all sorts of disclosures about them. Remember when you did the web search on that fellow and posted some personal items about his tax situation? You scared him off and ended his argument here with you. But I don't scare, George.
You threatened me with a lawsuit. I was supposed to shrink back and cower.
I am not just off the turnip truck, George. Threat of a frivolous lawsuit from you does not frighten me from setting the record straight about me, that you have blotched. What is next, threat of assassination?
I did not respond to your insults and accusations for nearly a year. When friends shared with me the Emails you were sending claiming I was making fraudulent postings, that I did not have the equipment I claimed, I decided you need to be stopped. Decent people should not have to fear you.
You have met your match with me. You woke a sleeping tiger, with the legal and financial means to see this through.

> I don't think I ever said you didn't have the equipment you claim. I mearly
>said we haven't seen all those antennas you bragged about and we asked
>where are they?

Don't try to change your posture now; too late George. You "don't think" you did? You have done it here, in the past week. You have done it in Emails to persons I know, and some of what you said got forwarded to others. I have a paper trail of your malevolence that is as good as you claim your financial paper trail is.

We'll see who prevails, little man.

What ever, you're so meak on MilCom and other places where you've been
told to tone it down..... But so loud and "mudslinging" here.

Just as another person on this group suggested, post some current
pictures of your house there in Sat. Beach with all those antennas and

you're claims of your "3 dozen" antennas will be proven. Pretty simple.

And don't use that excuse of Avon Park. You're Sig Line stated
Satellite beach, no mention of two houses. Plus you don't post loggings
from Avon park so I'm suspicious about that claim as well.

Sling all the mud you want cause I'm about to add you to my newgroups
killfile as you've added next to nothing conserning scanning here.

I'm always a nice guy on Milcom because you never accuse me of dishonesty there. You never said there that I falsify my postings. You never said there that I do not have the equipment I listed. So I have no reason to respond to your malice there.

>Just as another person on this group suggested, post some current
>pictures of your house there in Sat. Beach with all those antennas and
>you're claims of your "3 dozen" antennas will be proven. Pretty simple.

When I post my photos of my equipment I am sure you will find a way to argue about them. The photos have already have widespread circulation among the Milcom old-timers; we've all shared pics of our gear. Everybody else is soon gonna see them too. You'll poke and pick at them, but discerning people will see through you, as they do now.

>Sling all the mud you want cause I'm about to add you to my newgroups

George.

No response to this, huh George? Some of your new-found friends here don't know about this; they don't realize you have "priors." You have bullied the last guy here tho. Watch.

> You threatened me with a lawsuit. I was supposed to shrink back
> and cower.
> I am not just off the turnip truck, George. Threat of a frivolous lawsuit
>from you does not frighten me from setting the record straight about
> me, that you have blotched.

Not like you to ignore this, George. You deciding not to sue me? Awwww.
George, the first one to threaten a lawsuit almost always:
1. Doesn't go through with it.
2. Has no legal basis for the suit.
3. Hopes to scare the person he is threatening.
You fit the bill to a tee.

>When friends shared with me the Emails you were sending claiming
> I was making fraudulent postings, that I did not have the equipment
> I claimed, I decided you need to be stopped.

Heh. I knew you would not deny this one, because about now you are kicking yourself in the butt for putting some of the stuff in writing, and wondering which people forwarded the messages to me. See you really don't have the standing amongst your "friends" you think.

> Decent people should not have to fear you.
> You have met your match with me. You woke a sleeping tiger, with
> the legal and financial means to see this through.

No response here, or was your response the kill-file so you won't create a deeper hole. You are no match for me. Smart to give up and stop your malevolence, but too late in some ways.

> We'll see who prevails, little man.

"Know thy enemy" is the tenet of the Military mind. You misjudged yours.

I had thought this was answered before but here's another stab. The frequencies you see under my HF Mil Freqs heading (http://www.milaircomms.com/mil_hf_freq.html) which is where the above caome from are typically KHz or MHZ, which ever would put them in the range of HF. The range of HF is normally 100KHz to 30,000KHz (sometimes called 30.000 MHz).

Its generally known to most people how to convert from KHz to MHz and where the decimal point should go when programming an HF freq.

However since there are a lot of new people getting into the hobby I should put KHz in those listings.

There are some newbies to scanning who just got scanners and were wondering how to program 8983 into their scanner. They didn't relize that they needed a different radio (one that covers HF) to listen to that freq.

Actually I've been wanting to re-do the USCG HF page. If you notice my other HF pages, in fact I think all but USCG (US Coast Guard) have the units identified either beside the freq or at the top heading as KHz or MHz.

How long do you believe that "Public" records will be public?
The extension of you well made point is that the FCC will act to make many
records private.

1. We live in a free country.

2. Many thousands of illegal immigrants flow into this country every year,
depriving other Americans of jobs, and increasing taxes for American Citizens
because of the medical care necessary for these illegal immigrants and the
significant amounts of crime that they commit.

One of these statement is false, which one?

Take care Burr and get the hoses out and patch up the leaks.

It's damn sure fire season and I'm damn lucky not to be living in
one of those areas now. I'm near Seattle (west side of the
mountains) and they are gearing up for fire season here also.

Insurance companies will go broke this year for sure.

As a Army retiree that served 23 years to protect our freedoms, I
can
honestly say we can kiss a lot of our freedoms goodbye. It's
exactly
what
the terrorist want. They go ape shit whenever we up our alert
status
and
know they hurt us where it did the most damage - our security,
peace
of
mind, and of course our pocketbooks.

About a year ago in another newsgroup I said to the folks there to
be
ready
for a National ID Card. I was only speculating at the time and lo
and behold,
it's one of the things being considered now. I used to think that
my
retired
military ID card did wonders for me (getting through Customs
easier,
etc),
but it won't mean anything if they come out with that National ID
Card.

Folks, you might as well prepare yourselves for some rude
awakenings.
Our
Government is on the path to take away what privacy you have
enjoyed.
It won't
be long in the future where you will give up your scanners, CB's,
HAM
radios, etc,
for the sake of security of the United States.

As for Nevada making it criminal to have radio frequencies, I
laugh
at that due to the
sheer fact that the airwaves belong to the world public and not

one
entity. I can see
them outlawing scanner ownership both mobile and stationary, but
not
possession of
frequencies. They would also have to outlaw all publications that
have frequencies in
them and try to police the Internet as well. Impossible.

The FCC would first have to criminalize the possession of
frequencies. And that would
be like making it illegal to own a gun. Yeah, right. When you
create a new class of criminal,
you also need to build more jails to put them in.

Anyone here that's over 50 shouldn't have to worry yet about
losing
much freedom, but
those under 50 should be prepared for "Big Brother". The FBI can
now
crash into your
home without a search warrant and to top it off, wiretap you and
bug
the hell out of you
all without a warrant. It won't be long before local law
enforcement
will have that power,
all for the sake of the security of the United States.

Some of you may laugh at this posting and say I'm full of doo doo,
but if you find that what
I'm saying does come true, since I'll most likely be dead by that
time, just donate $1000 to
your favorite charity in my name (Old Sarge). I'll roll over and
say
"I told you so".

Now would someone please post an updated listing of States that do
not allow mobile scanners?
It helps travellers when passing through a State that has a law
against them. Also radar detectors.

For what it's worth.... this scanner can be modified to pick up
Mobile Data Terminals.
Depending on the date, it can also pick up cell phones (non
digital).
I bought mine before
the ban went into effect. A friend modified it to pick up mobile
data terminals, but the
squelch wouldn't turn off and I had to have it fixed by Radio
Shack.
They removed the
discriminator capacitor my friend put in for the MDT. That MDT
stuff
was pretty
interesting to look at. I still have my 2026 and use it
frequenty.
I cannot see selling it
as it is a great scanner, although not a Trunker. It's small and
therefore easy to install
into just about any vehicle. Anyone thinking about purchasing
this
scanner should consider
it a good deal.

I am OK I think, I don't think there is much that will burn for a mile around me unless the wind takes out some houses and it keep jumping that way. I also have a Composition roof. Really there nothing close to me to burn.
BUT yes with the rain we had there is going to be lots of fuel this year. It has already started, it didn't make it over 110ï¿½ today, light winds. They are still fighting the fire east of Bakersfield after four hours.

1278. Re: Fire

Newsgroup: rec.radio.scanner
Date: 2003-05-30 00:04:05 UTC
From: Burr <pitzpho@earthlink.net>
Message-ID: <3ED6AE9B.8040504@earthlink.net>
Source record: 30559

I'm in Ridgecrest, just north west of Irwin 40 miles as the crow flys.

They are down to about three engines over in Bakersfield and they
reopened the freeway over there.

1280. Secure Baby Monitor

Newsgroup: rec.radio.scanner
Date: 2003-05-30 01:16:21 UTC
From: John Smith <yvzvw@earthlink.net>
Message-ID: <FhyBa.24889$lo.2055642@newsread2.prod.itd.earthlink.net>
Source record: 30561
Cross-posted to: alt.ham-radio.vhf-uhf,alt.radio.scanner,rec.radio.scanner

I've scanned (so to speak) a number of threads in this newsgroup, and I still cannot find the answer to this question:

Is there a baby monitor made today which is secure? Apparently, 900 mhz is not enough. Does no one make spread spectrum like many phones have been for quite a few years?

There MUST be something. Please help.

1281. Re: Secure Baby Monitor

The reason you have this problem is probably because you're asking a
question that has nothing to do with police scanners in a newsgroup about
police scanners.

I suggest you redirect your question to rec.electronics.baby-monitors, which
of course there is no such thing but maybe this will give you a hint not to
crosspost off-topic crap into this group.

Seems like a perfectly reasonable request for these groups! Nobody
complains when someone reports about what they heard on their scanners
while they scan open baby monitors.

Unfortunately, I've never seen such a product.

> LINK: Nevada Assembly Bill No. 441 (A441)

While I am not an attorney, it appears that the above captioned
legislative proposal merely outlaws the release of state documents,
including those listing radio freqs and other information. It does not
appear to prevent one from obtaining the information from other sources
(such as FCC records, over the air monitoring, etc.)

If you read the entire act (it is huge!) it goes into great detail about
the protection of many state records.

Quote from the above statute:

Major snippage...

• (f) Documents, records or other items of information that
reveal frequencies for radio transmissions used by response agencies.

3. •If a person knowingly and unlawfully discloses a document, record or
other item of information subject to an executive order issued pursuant
to subsection 1 or assists, solicits or conspires with another person to
disclose such a document, record or other item of information, the
person is guilty of:

(a) A gross misdemeanor; or

(b) A category C felony and shall be punished as provided in NRS 193.130
if the person acted with the intent to:

etc. etc. etc.

So.... unless you retrieved the information from protected state
governmental records you can not be prosecuted under this law. There are
other states (Florida?) that have similar provisions protecting state
records regarding a variety of sensitive subjects.

North of LA County.

So. California, USofA

Nice sig you have, tells us a lot also.

That's the same cable I bought too... works great!!
Have fun,
-MG

1290. More Fires

Newsgroup: rec.radio.scanner

More little fires here in Ridgecrest, they are clearing them as soon as they come in. One of them was in a block of the fire station.
The I guess it's that time of the year again. The ones you'll see on the news are the ones that got away from them. Last week I heard them say a guy war running around in the desert south of here setting fires, the RP was watching him with glasses!

Getting these scanners are the best thing I have done in a long time. I never knew so much went on in this area, I have the BC245 setup in my workshop or have a antenna/power setup in my pickup and car.

I'M ENJOYING MYSELF.

Burr
